

Information and installation instructions for self adhesive mounting bases

HellermannTyton use two different types of adhesive for self adhesive bases: acrylate and synthetic rubber. These differ in the operating temperature range and the 'pull off' force of the adhesive. Synthetic rubber has an excellent initial grip, allowing for almost immediate use. Acrylate adhesive has less initial grip, so there is a need to

wait for a few hours before use, but has a higher 'pull off' force than synthetic rubber. This enables a permanent fixing lasting months or even years. To use these adhesives the surface must be dry, and free of dust, oil, oxides, parting agents and other impurities. For this the use of isopropane/water (50/50) is recommended.

After cleaning allow the surface to dry completely. Peel off the protective backing on the self adhesive base, ensuring the adhesive is not touched. Apply the part to the surface and press down firmly for several seconds.

Acrylate	
Base material	PE foam or PU foam
Temperature range	at least up to +90°C

Synthetic rubber	
Base material	PE foam
Temperature range	at least -40°C to +60°C

Instructions for use

1. The surface must be dry, free from dust, oil, oxides, parting agents and other impurities. The surface to be glued should be cleaned using a clean cloth and isopropanol /water (50/50). When using other appropriate cleaning agents, ensure that they do not attack the surface or leave any residues.

2. After cleaning allow the surface to dry completely.

4. Press down firmly on the base for several seconds.

3. Peel off protective backing and ensure the adhesive area is not touched.

5. Depending on the type of adhesive, wait for several minutes (synthetic rubber) or hours (acrylate) so that the adhesive can bond completely with the surface.

We will be happy to send you on request an up to date technical datasheet for whichever adhesive you are using.

Are you looking for a base with special adhesive for problematic surfaces, such as PE or PP? We work closely with leading manufacturers of adhesives. Please contact us for further details.

Fixing Parts with special adhesive - SolidTack® Series

Features and Benefits

Sometimes it is not possible to fix a cable with standard fixing parts and mounting bases. This is a common problem with varnished surfaces when it is not possible to drill a hole, use an edge clip or weld stud, or where methods are too time consuming and expensive. It is also problematic for surfaces such as PE or PP where a standard adhesive base does not work.

For these applications a new mounting base range with special adhesive has been developed. The adhesive tape is made of an acrylate mass with a superior initial tack, achieving a strong bond on painted surfaces and plastics with a low surface energy such as PE or PP.

SolidTack® products work on varnished and powder coated surfaces.

Three different sizes of mounting base for cable ties are available. Two separate clamp sizes are also available to fix and secure flat and round cables without using a cable tie.

Application

These products work on varnished and powder coated surfaces as used in the railway, aviation or automotive industry. They can also be used on plastic covers, cases and parts as used in a variety of other industries.

MB Self Adhesive Cable Tie Mounts

Features and Benefits

Available in either screw or self adhesive mounting this range offers a safe and secure fixing base..

Simple to install with a screw or bolt they give excellent security, particularly in areas of high vibration.

The Self Adhesive mounts are designed to offer the maximum surface area, and in conjunction with the specially developed adhesive ensures that a very high pull-off force is achieved.

The MB mounts offer '4-way' entry for the cable tie enabling quicker and more flexible installation.

Application

Designed specifically for holding heavier cable bundles these mounting bases can be used in many industries from agriculture to truck manufacture. They offer a very secure fixing and can be used with a wide variety of heavy duty cable ties up to 8mm wide.

TY Self Adhesive Cable Tie Mounts

Features and Benefits

TY mounts are particularly suitable for applications with minimal space - they are mounted into the equipment prior to cable installation. The cables can be attached using a range of standard cable ties.

Cable Tie Mounts TY3G1 (S)

Cable Tie Mounts TY8G1 (S)

Application

These products are designed for simple, yet robust, installation in a wide variety of applications - particularly used in telecoms equipment, switchgear and control cabinets.

KR/CTM Cable Tie Mounts

Features and Benefits

KR mounts give additional support to the cables by means of their curved design. Simple to install with a screw or bolt they give excellent security, particularly in areas of high vibration when used in conjunction with the KR straps. They must offer one of the most vibration resistant fixings available.

Cable Tie Mounts KR6G5, KR8G5 and CTM

Application

Designed specifically for holding heavier cable bundles these mounting bases can be used in many industries from agriculture to truck manufacture, they offer a very secure fixing and can be used with a wide variety of heavy duty cable ties up to 7.6mm wide.

CTAM and CTAP, MB and TY Cable Tie Mounts

Features and Benefits

CTAM and CTAP mounts are suitable for applications with minimal space. They are mounted onto the equipment prior to cable installation as they are installed 'in line' and take up no more space than the cable itself.

The CTAM has a '4-way' entry design and can be used either 'in line' or at 90 degrees to the cable run.

The CTAP mounts offer an adjustable 'stand off' feature allowing the cable run to be precisely positioned.

Application

Each of these products offer particular benefits, but all are designed for simple, yet robust, installation in a wide variety of applications. Particularly used in telecoms equipment, switchgear and control cabinets.

LKM, CL8 and FH Cable Tie Mounts

Features and Benefits

With these screwfix mounts it is possible to install the cable sideways. The FH mounts feature a compact design.

The CL8/LKM mounts are ideal for securing large, heavier bundles and will accept cable ties up to 8mm wide.

Application

In areas with limited space these mounting bases allow the cable to be offset from the fixing hole, and can be installed in the equipment prior to the cable installation. A major cost saving can be made by using these products as many different sizes of standard cable ties can be used, reducing the need to stock a wide range of specific fixing ties.

Mounting Plates Types MP and MSMP

Features and Benefits

Allowing multiple cables to be run in parallel these mounting plates are simply fixed by two screws. The cables are attached to the mounting plate by using a cable tie through any combination of the available slots.

Application

Many applications require each cable run to be firmly held in place but separately from adjacent cable runs (example - control cabinets, machinery and military systems). The MP series of mounts help achieve this.

Cable Fixing Accessory TM1SF

Features and Benefits

The TM1SF mount is ideal for applications with restricted access, or where space-saving is required. The arrowhead simply pushes into a pre-drilled or pre-punched hole giving a very secure fixing.

TM1SF Fixing Base

SFC Arrowhead Cradle

Features and Benefits

Arrowhead fixing for use in pre-drilled or punched holes. Provides secure cradle for use with HellermannTyton cable ties. SFC and SFC2 for ties up to 4.8mm width. SFC3 will accept ties up to 8mm width.

Application

Offering simple and easy methods of securing cables or pipes these fixing accessories have many applications within a wide range of industries.

Cable Fixing Accessories Tape Clip, TC and CH Series

Features and Benefits

Various TapeClips have been developed especially for banding of cables and cable looms. The cable looms are fastened onto the winding bar by means of twine, adhesive tape or cable ties.

The various fixing types allow the use in a wide variety of metal plates and hole diameters. The base of the CHA holder can be moved along the axis in order to equalise tolerances. The TapeClip CHDP66 is noted for its vertical winder bar, which means that 2 leads or cable bundles can be run in parallel.

Application

Originally designed for the Automotive industry, these clips offer simple and easy methods of securing cable hoses or pipes. They have many applications within a wide range of industries.

Cable Fixing Accessories Tape Clip, COW Series and CH Series

Features and Benefits

The COW clips can be used as a conventional tape-on clip or assembled with a cable tie to fix the harness in place. They can be purchased separately or ready assembled.

Application

Originally designed for the Automotive industry, these clips offer simple and easy methods of securing cable hoses or pipes. They have many applications within a wide range of industries.

Cable Fixing Accessories EdgeClip

Features and Benefits

Edge Clip mounting solutions stand out for the ease with which they can be fitted. They are installed simply by pressing onto a plastic or metal edge. EC7 cables and leads can be located by simply laying them into the holder. EC14 to EC17 cables can be fastened to the cable bundle by using a cable tie or adhesive tape.

Application

Edge Clips are used in the automotive industries and electrical industries and when it is impossible to drill holes or no other fixing points are available.

Cables and leads can be fastened with a cable tie or adhesive tape to the bars of the mounting element.

TY5 Rivet Mount

Features and Benefits

Quick installation is one of the key features of the TY mounts. Consisting of a two piece 'wedge' the fixing is easily inserted using special tools. The special 'diagonal' design of the fixing guarantees a secure installation at all times.

Once installed the TY mounts offer a firm fixing for a wide variety of cable ties.

Application

The TY Fixings are ideal for use where a high pull out force is required (eg. in the aircraft industry). The two piece 'wedge' ensures that once installed the mounts will not come away from the panel. Particularly designed for areas with restricted access.

Dual Swivel Saddle Spacer DSWS4

Features and Benefits

These saddle spacers are installed between two bundles (such as wires, cables, hoses, tubing, conduit, etc.) to separate them and prevent chafing and wear. The mounts can be easily rotated by hand, allowing the bundles to be crossed and rotated at any angle. Cable ties, which secure the bundles, are used with the mounts. The dual swivel saddle spacers accommodate cable ties up to 12.7mm wide.

The "H" profile of the saddles allows for broad surface contact with the bundle, minimizing pinching and crushing of the bundle, and it accepts a wide range of bundle diameters from 6mm to 76mm.

The DSWS4 Dual Swivel Saddle Spacer provides a 17.8 millimeter separation between bundles. Friction tabs in the tie slots help hold the cable ties in place during assembly.

The DSWS4 is two-shot molded with polyacetal and polyamide 6.6 heat stabilized materials.

This product is designed for use with HellermannTyton's T50 - T250 Series cable ties.

Application

Primarily designed for use in the automotive/truck industry, these parts can be used in a wide variety of industries and applications where bundles need a standoff mounting position.

Material Data

Dual Swivel Saddle Mounts

DSWS5

Features and Benefits

These saddle spacers are installed between two bundles (such as wires, cables, hoses, tubing, conduit, etc.) to separate them and prevent chafing and wear. The spacers can be easily rotated by hand, allowing the bundles to be crossed and rotated at any angle. Cable ties, which secure the bundles, are used with the spacers.

The DSWS5 accepts bundle diameters ranging from 16mm to 152mm and provides a 23.6 mm separation between bundles. The dual swivel saddle spacers accommodate cable ties up to 12.7mm wide.

Application

Primarily designed for use in the automotive/ truck industry, these parts can be used in a wide variety of industries and applications where bundles need separation from each other.

The spacers can be easily rotated by hand, allowing the bundles to be crossed and rotated at any angle.

Heavy Duty Mounts

Features and Benefits

The heavy-duty mount, when used with a cable tie, eliminates the need to carry multiple sizes of fixed bundle diameter clamps, which reduces inventory and purchasing costs while simplifying the assembly process. The mount and cable tie combination makes it easy to service bundles in the field. Simply remove the cable tie, leave the mount in place, and replace the cable tie. They contain a small tab inside the mounting hole to temporarily engage the threads, which allows assemblers to pre-install the mount on a stud before securing with a washer and a nut.

The arched "H" profile of the saddle surface allows for a broad surface contact with the bundle, minimizing pinching and crushing of the bundles, and adjusts to a wide variety of bundle diameters.

U.S. Patent Number 5,820,083

The heavy-duty mounts are designed for use with HellermannTyton's heavy duty T250, T255 and wide strap cable ties to harness wires and hoses.

Application

Primarily designed for use in the automotive/truck industry, these parts can be used in a wide variety of industries and applications where bundles need mounting.

Material Data

Medium Torque Mounts

High Torque Mounts

Features and Benefits

This mount is designed for use with power-assisted impact wrenches and is moulded with a metal bushing to withstand the forces required to tighten high torque bolts. The high torque double mount secures the bundle directly over the mounting fastener. The cable ties are held in place during assembly with friction tabs inside the cable tie slots.

The mount and cable tie combination makes it easy to service bundles in the field. Simply remove the cable tie, leave the mount in place, and replace the cable tie. The arched "H" profile of the saddle surface allows for a broad surface contact with the bundle, minimizing pinching and crushing of the bundles, and accommodates a wide variety of bundle diameters.

Application

Primarily designed for use in the automotive/truck industry, these parts can be used in a wide variety of industries and applications where bundles need mounting.
