Description

The JANTX2N5796U is a hermetically sealed, ceramic surface-mount device, consisting of two individual silicon PNP transistors. The six pin ceramic package is ideal for designs where board space and device weight are important design considerations.

Typical screening and lot acceptance tests are provided on page 13-4. The burn-in condition is $V_{CB} = 30$ V, $P_D = 300$ mW each transistor, $T_A = 25^\circ C$. Refer to MIL-PRF-19500/496 for complete requirements.

When ordering parts without processing, do not use a JAN prefix.
