

TSH70,71,72,73,74,75

Rail-to-Rail, Wide-Band, Low-Power Operational Amplifiers

- 3V, 5V, $\pm 5V$ specifications
- 3dB bandwidth: 90MHz
- Gain bandwidth product: 70MHz
- Slew rate: 100V/ms
- Output current: up to 55mA
- Input single supply voltage
- Output rail-to-rail
- Specified for 150 Ω loads
- Low distortion, THD: 0.1%
- SOT23-5, TSSOP and SO packages

Description

The TSH7x series offers single, dual, triple and quad operational amplifiers featuring high video performances with large bandwidth, low distortion and excellent supply voltage rejection.

Running with a single supply voltage from 3V to 12V, these amplifiers feature a large output voltage swing and high output current capable of driving standard 150 Ω loads. A low operating voltage makes TSH7x amplifiers ideal for use in portable equipment.

The TSH71, TSH73 and TSH75 also feature standby inputs, each of which allows the op-amp to be put into a standby mode with low power consumption and high output impedance. This function allows power saving or signal switching/multiplexing for high-speed applications and video applications.

To economize both board space and weight, the TSH7x series is proposed in SOT23-5, TSSOP and SO packages.

Applications

- Video buffers
- ADC driver
- Hi-fi applications

Pin Connections (top view)

1 Order Codes

Part Number	Temperature Range	Package	Packing	Marking
TSH70CLT	0°C to 70°C	SOT23-5	Tape & Reel	K301
TSH70CD/CDT		SO-8	Tube or Tape & Reel	70C
TSH71CD/CDT		SO-8	Tube or Tape & Reel	71C
TSH71CPT		TSSOP8 (Thin Shrink Outline Package)	Tape & Reel	71C
TSH72CD/CDT		SO-8	Tube or Tape & Reel	72C
TSH72CPT		TSSOP8 (Thin Shrink Outline Package)	Tape & Reel	72C
TSH73CD/CDT		SO-14	Tube or Tape & Reel	73C
TSH73CPT		TSSOP14 (Thin Shrink Outline Package)	Tape & Reel	73C
TSH74CD/CDT		SO-14	Tube or Tape & Reel	74C
TSH74CPT		TSSOP14 (Thin Shrink Outline Package)	Tape & Reel	74C
TSH75CD/CDT		SO-16	Tube or Tape & Reel	75C
TSH75CPT		TSSOP16 (Thin Shrink Outline Package)	Tape & Reel	75C

2 Typical Application: Video Driver

A typical application for the TSH7x family is that of video driver for driving STi7xxx DAC outputs on 75-ohm lines.

Figure 1 show the benefits of the TSH7x family as single supply drivers.

Figure 1. Benefits of TSH7x family: +3V or +5V single supply solution

3 Absolute Maximum Ratings & Operating Conditions

Table 1. Absolute maximum ratings (AMR)

Symbol	Parameter	Value	Unit
V_{CC}	Supply Voltage ⁽¹⁾	14	V
V_{id}	Differential Input Voltage ⁽²⁾	± 2	V
V_i	Input Voltage ⁽³⁾	± 6	V
T_{oper}	Operating Free Air Temperature Range	0 to +70	°C
T_{stg}	Storage Temperature	-65 to +150	°C
T_j	Maximum Junction Temperature	150	°C
R_{thjc}	Thermal resistance junction to case ⁽⁴⁾ SOT23-5 SO-8 SO-14 SO-16 TSSOP08 TSSOP14 TSSOP16	80 28 22 35 37 32 35	°C/W
R_{thja}	Thermal resistance junction to ambient area SOT23-5 SO-8 SO-14 SO-16 TSSOP08 TSSOP14 TSSOP16	250 157 125 110 130 110 110	°C/W
ESD	Human Body Model	2	kV

1. All voltages values, except differential voltage are with respect to network ground terminal
2. Differential voltages are non-inverting input terminal with respect to the inverting terminal
3. The magnitude of input and output must never exceed $V_{CC} + 0.3V$
4. Short-circuits can cause excessive heating

Table 2. Operating conditions

Symbol	Parameter	Value	Unit
V_{CC}	Supply Voltage	3 to 12	V
V_{IC}	Common Mode Input Voltage Range	V_{CC}^- to $(V_{CC}^+ - 1.1)$	V
Standby		(V_{CC}^-) to (V_{CC}^+)	V

4 Electrical Characteristics

5 Testing Conditions

5.1 Layout precautions

To use the TSH7X circuits in the best manner at high frequencies, some precautions have to be taken for power supplies:

- First of all, the implementation of a proper ground plane in both sides of the PCB is mandatory for high speed circuit applications to provide low inductance and low resistance common return.
- Power supply bypass capacitors (4.7uF and ceramic 100pF) should be placed as close as possible to the IC pins in order to improve high frequency bypassing and reduce harmonic distortion. The power supply capacitors must be incorporated for both the negative and the positive pins.
- Proper termination of all inputs and outputs must be in accordance with output termination resistors; in this way, the amplifier load will be resistive only, and the stability of the amplifier will be improved.
- All leads must be wide and as short as possible (especially for op-amp inputs and outputs) in order to decrease parasitic capacitance and inductance.
- For lower gain applications, care should be taken to avoid large feedback resistance (>1kΩ) in order to reduce the time constant of parasitic capacitances.
- Choose component sizes as small as possible (SMD).
- Finally, on output, the load capacitance must be negligible to maintain good stability. You can put a serial resistance as close as possible to the output pin to minimize capacitance.

5.2 Maximum input level

Figure 47. CCIR330 video line

The input level must not exceed the following values:

- negative peak: must be greater than $-V_{CC}+400\text{mV}$.
- positive peak value: must be lower than $+V_{CC}-400\text{mV}$.

The electrical characteristics show the influence of the load on this parameter.

5.3 Video capabilities

To characterize the differential phase and differential gain, a CCIR330 video line is used.

The video line contains 5 (flat) levels of luma on which is superimposed chroma signal. The first level contains no luma. The luma gives various amplitudes which define the saturation of the signal. The chrominance gives various phases which define the color of the signal.

Differential phase (respectively differential gain) distortion is present if a signal chrominance phase (gain) is affected by luminance level. They represent the ability to uniformly process the high frequency information at all luminance levels.

When differential gain is present, color saturation is not correctly reproduced.

The input generator is the Rohde & Schwarz CCVS. The output measurement was done by the Rohde and Schwarz VSA.

Figure 48. Measurement on Rohde and Schwarz VSA

Table 7. Video results

Parameter	Value $V_{CC} = \pm 2.5V$	Value $V_{CC} = \pm 5V$	Unit
Lum NL	0.1	0.3	%
Lum NL Step 1	100	100	%
Lum NL Step 2	100	99.9	%
Lum NL Step 3	99.9	99.8	%
Lum NL Step 4	99.9	99.9	%
Lum NL Step 5	99.9	99.7	%
Diff Gain pos	0	0	%
Diff Gain neg	-0.7	-0.6	%
Diff Gain pp	0.7	0.6	%

Table 7. Video results

Parameter	Value $V_{CC} = \pm 2.5V$	Value $V_{CC} = \pm 5V$	Unit
Diff Gain Step1	-0.5	-0.3	%
Diff Gain Step2	-0.7	-0.6	%
Diff Gain Step3	-0.3	-0.5	%
Diff Gain Step4	-0.1	-0.3	%
Diff Gain Step5	-0.4	-0.5	%
Diff Phase pos	0	0.1	deg
Diff Phase neg	-0.2	-0.4	deg
Diff Phase pp	0.2	0.5	deg
Diff Phase Step1	-0.2	-0.4	deg
Diff Phase Step2	-0.1	-0.4	deg
Diff Phase Step3	-0.1	-0.3	deg
Diff Phase Step4	0	0.1	deg
Diff Phase Step5	-0.2	-0.1	deg

5.4 Precautions when operating on an asymmetrical supply

The TSH7X can be used with either a dual or a single supply. If a single supply is used, the inputs are biased to the mid-supply voltage ($+V_{CC}/2$). This bias network must be carefully designed, in order to reject any noise present on the supply rail.

As the bias current is 15uA, you must carefully choose the resistance R1 so as not to introduce an offset mismatch at the amplifier inputs.

Figure 49. Schematic of asymmetrical (single) supply

$R1 = 10K\Omega$ is a typical and convenient value. $C1$, $C2$, $C3$ are bypass capacitors that filter perturbations on V_{CC} , as well as for the input and output signals. We choose $C1 = 100nF$ and $C2 = C3 = 100\mu F$.

$R2$, $R3$ are such that the current through them must be greater than 100 times the bias current. Therefore, we set $R2 = R3 = 4.7K\Omega$.

C_{in} , as C_{out} , is chosen to filter the DC signal by the low-pass filters ($R1, C_{in}$ and R_{out}, C_{out}). By taking $R1 = 10K\Omega$, $R_L = 150\Omega$, and $C_{in} = 2\mu F$, $C_{out} = 220\mu F$ we provide a cut-off frequency below 10Hz.

Figure 50. Use of the TSH7x in gain = -1 configuration

Some precautions must be taken, especially for low-power supply applications.

A feedback capacitance, C_f , should be added for better stability. [Table 8](#) summarizes the impact of the capacitance C_f on the phase margin of the circuit.

Table 8. Impact capacitance C_f

Parameter	C_f (pF)	$V_{CC} = \pm 1.5V$	$V_{CC} = \pm 2.5V$	$V_{CC} = \pm 5V$	Unit
Phase Margin	0	28	43	56	deg
f-3dB		40	39.3	38.3	MHz
Phase Margin	5.6	30	43	56	deg
f-3dB		40	39.3	38.3	MHz
Phase Margin	22	37	52	67	deg
f-3dB		37	34	32	MHz
Phase Margin	33	48	65	78	deg
f-3dB		33.7	30.7	27.6	MHz

6 Package Mechanical Data

In order to meet environmental requirements, ST offers these devices in ECOPACK[®] packages. These packages have a Lead-free second level interconnect. The category of second level interconnect is marked on the package and on the inner box label, in compliance with JEDEC Standard JESD97. The maximum ratings related to soldering conditions are also marked on the inner box label. ECOPACK is an ST trademark. ECOPACK specifications are available at: www.st.com.

6.1 SO-8 Package

6.2 TSSOP8 Package

6.3 SO-14 Package

6.4 TSSOP14 Package

6.5 SO-16 Package

6.6 TSSOP16 Package

6.7 SOT23-5 Package

SOT23-5L MECHANICAL DATA						
DIM.	mm.			mils		
	MIN.	TYP	MAX.	MIN.	TYP.	MAX.
A	0.90		1.45	35.4		57.1
A1	0.00		0.15	0.0		5.9

The diagram illustrates the mechanical dimensions of the SOT23-5L package. The left view is a side profile showing dimensions A (total width), A1 (lead thickness), A2 (lead width), C (lead thickness at base), and L (lead height). The right view is a top-down perspective showing dimensions D (package width), E (package height), E1 (package height excluding leads), b (lead width), e (lead pitch), and e1 (lead pitch between mounting pads).

7 Revision History

Table 9. Document revision history

Date	Revision	Changes
Nov. 2000	1	First Release.
Aug. 2002	2	Limit min. of I_{sink} from 24mA to 20mA (only on 3V power supply). Reason: yield improvement.
May 2006	3	Improvement of VOL max. at 3V and 5V power supply on 150-ohm load connected to GND (pages 6 and 8). Reason: TSH7x can drive video signals from DACs to lines in single supply (3V or 5V) without any DC level change of the video signals. Grammatical and typographical changes throughout. Package mechanical data updated.
