

Evaluation board

DATASHEET

Main components

- STR730F processor running at up to 36MHz
- SPI EEPROM
- I²C EEPROM
- LCD display

Features

- Support for the following interfaces:
 - CAN
 - RS232
- LED displays
- Buzzer
- Test buttons
- JTAG connector
- Analog channel

Description

The STR730-EVAL board is a complete development platform for the STR73x series. The STR730-EVAL board is a cost effective, flexible and open design to demonstrate the capability of the STR730 series of flash micro-controllers and to enable rapid evaluation of the STR73x devices and available peripherals. It includes the high performance STR730F ARM7TDMI™ device that features a rich set of peripherals and serial communication interfaces, including CAN (controller area network).

The STR730-EVAL board integrates a 2 x 16 LCD, LEDs, UART, CAN interfaces, piezo buzzer and test buttons to create a versatile stand-alone test platform. A wide choice of third party development tools are readily available in addition to those available from STMicroelectronics.

Obsolete Product(s) - Obsolete Product(s)

1 Introduction

STMicroelectronics is a global independent semiconductor company that designs, develops, manufactures and markets a broad range of semiconductor integrated circuits and discrete devices used in a wide variety of applications.

The STR730-EVAL board is based on the STR730FZ2T7, a highly integrated microcontroller, running at up to 36 MHz that uses the popular ARM7TDMI™ 32-bit RISC CPU featuring on-chip high speed single voltage flash memory and high-speed RAM, clock generation via PLL, and numerous on-chip peripherals.

This board is intended as low cost development platform to demonstrate the capability of the STR730 series of flash micro-controllers and to enable rapid evaluation of the STR730 devices and available peripherals.

The STR730-EVAL board has 8 Kbit SPI EEPROM and 8 Kbits I²C EEPROM and supports CAN and RS232 interfaces. It includes a 2 x 16 programmable LCD display supported by select, next, back, previous and wake-up push buttons.

The hardware platform of the STR730F series is supported by an extensive software support package, including device drivers in ANSI C source form and demonstration software. It is flashed with a demonstration application that shows the basic features of the device. Development tools are readily available. This is complemented by a range of third party real-time OS and middleware.

Design schematics can also be supplied in electronic format to those customers with compatible design environments.

1.1 Processor and memory devices on this board

- STR730F ARM7TDMI™ processor running at up to 36 MHz, IC11:
 - 144-pin TQFP version,
 - 256 Kbytes flash program memory,
 - 16 Kbytes RAM,
 - embedded 1.8 V voltage regulator for core supply,
 - nested interrupt controller.
- Clocking is performed by a surface mounted 8 MHz quartz.
- Serial ROMs:
 - 8-kbit SPI EEPROM connected to the buffered serial peripheral interface (BSPI2): IC7,
 - I²C EEPROM: 8-kbit EEPROM connected to the I²C0 interface: IC8.

1.2 Board interface connections

Diagrams and wiring descriptions for these connectors are provided in [Chapter 4: Schematics on page 21](#). The following connections are supported by the board:

- CAN uses a single 9 D-type connector with microswitch selectable low or high speed transceiver: CN4
- UART0 (Rx and Tx only) connected to a 9-way male D-type RS232 connector: CN2
- UART1 (Rx and Tx only) connected to a 9-way male D-type RS232 connector: CN3
- JTAG, 20 pin IDC connector: CN1
- variable resistor, voltage range 0 to 4.5 V: R33
- LM35 temperature sensor: IC9
- prototype area: GD1
- test points, various test points are located throughout the board, for details see [Chapter 4: Schematics on page 21](#)
- main power supply: CN5

1.3 Push buttons

The following push buttons are provided:

- next (NEXT), programmable switch: SW12
- previous (PREV), programmable switch: SW13
- reset (RST), board reset: SW14
- select (SEL), programmable switch: SW15
- back (BACK), programmable switch: SW16
- wakeup (WAKE-UP), push button to bring processor out of low power mode: SW17

1.4 Displays

The following LCD and LEDs are provided:

- LCD display, 2x16 LCD display connected to a general purpose input/output LCD interface; green back light display: LCD1
- surface mount red, +5 V power indicator: LD19
- bi-color red/green: LD17, LD21, LD22, LD23, LD24, LD25
- low consumption LEDs red: LD1, LD2, LD3, LD4, LD5, LD6, LD7, LD8, LD9, LD10, LD11, LD12, LD13, LD14, LD15, LD16

2 Hardware

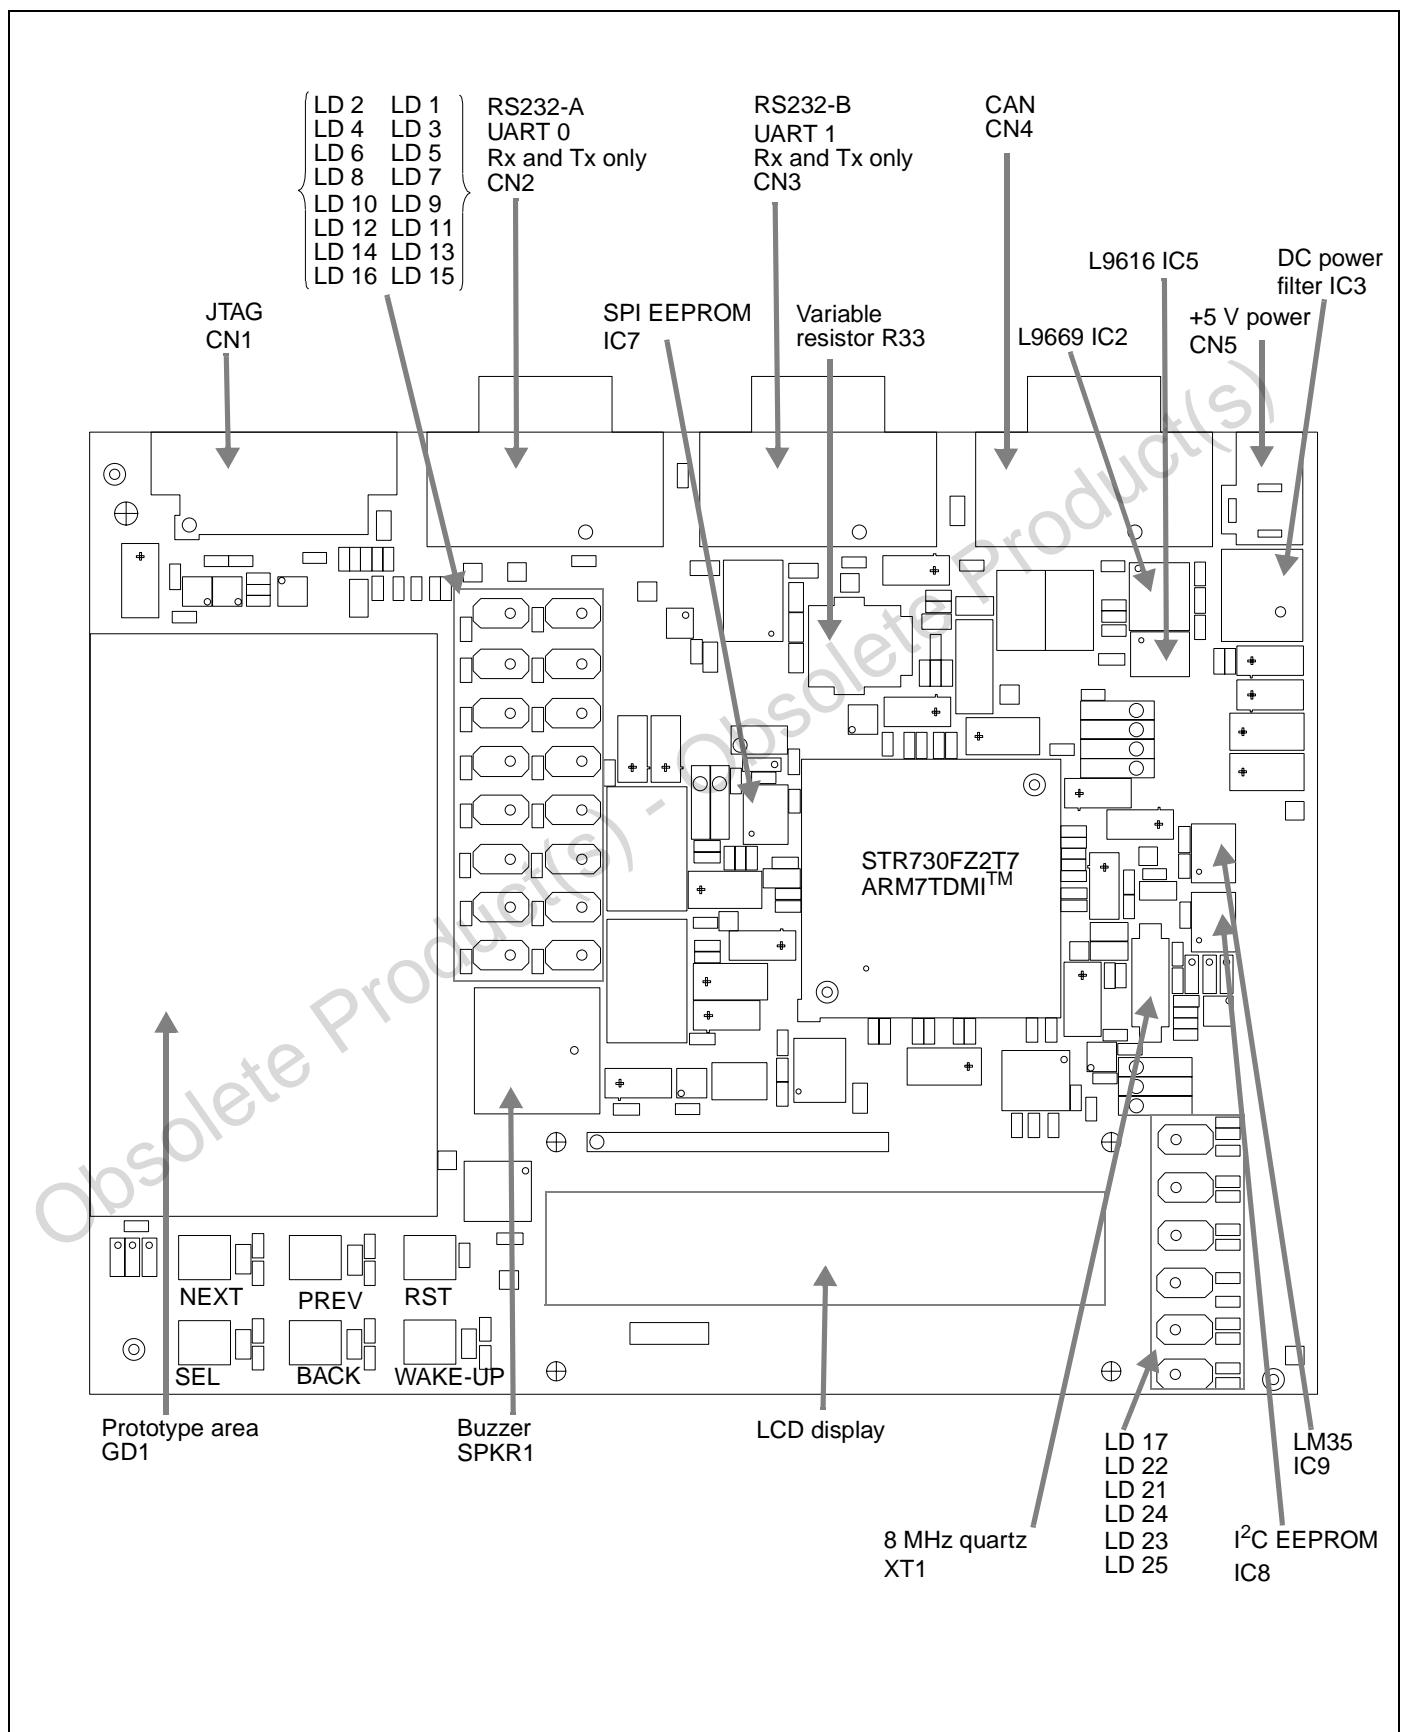

Figure 1: STR730-EVAL board layout block diagram

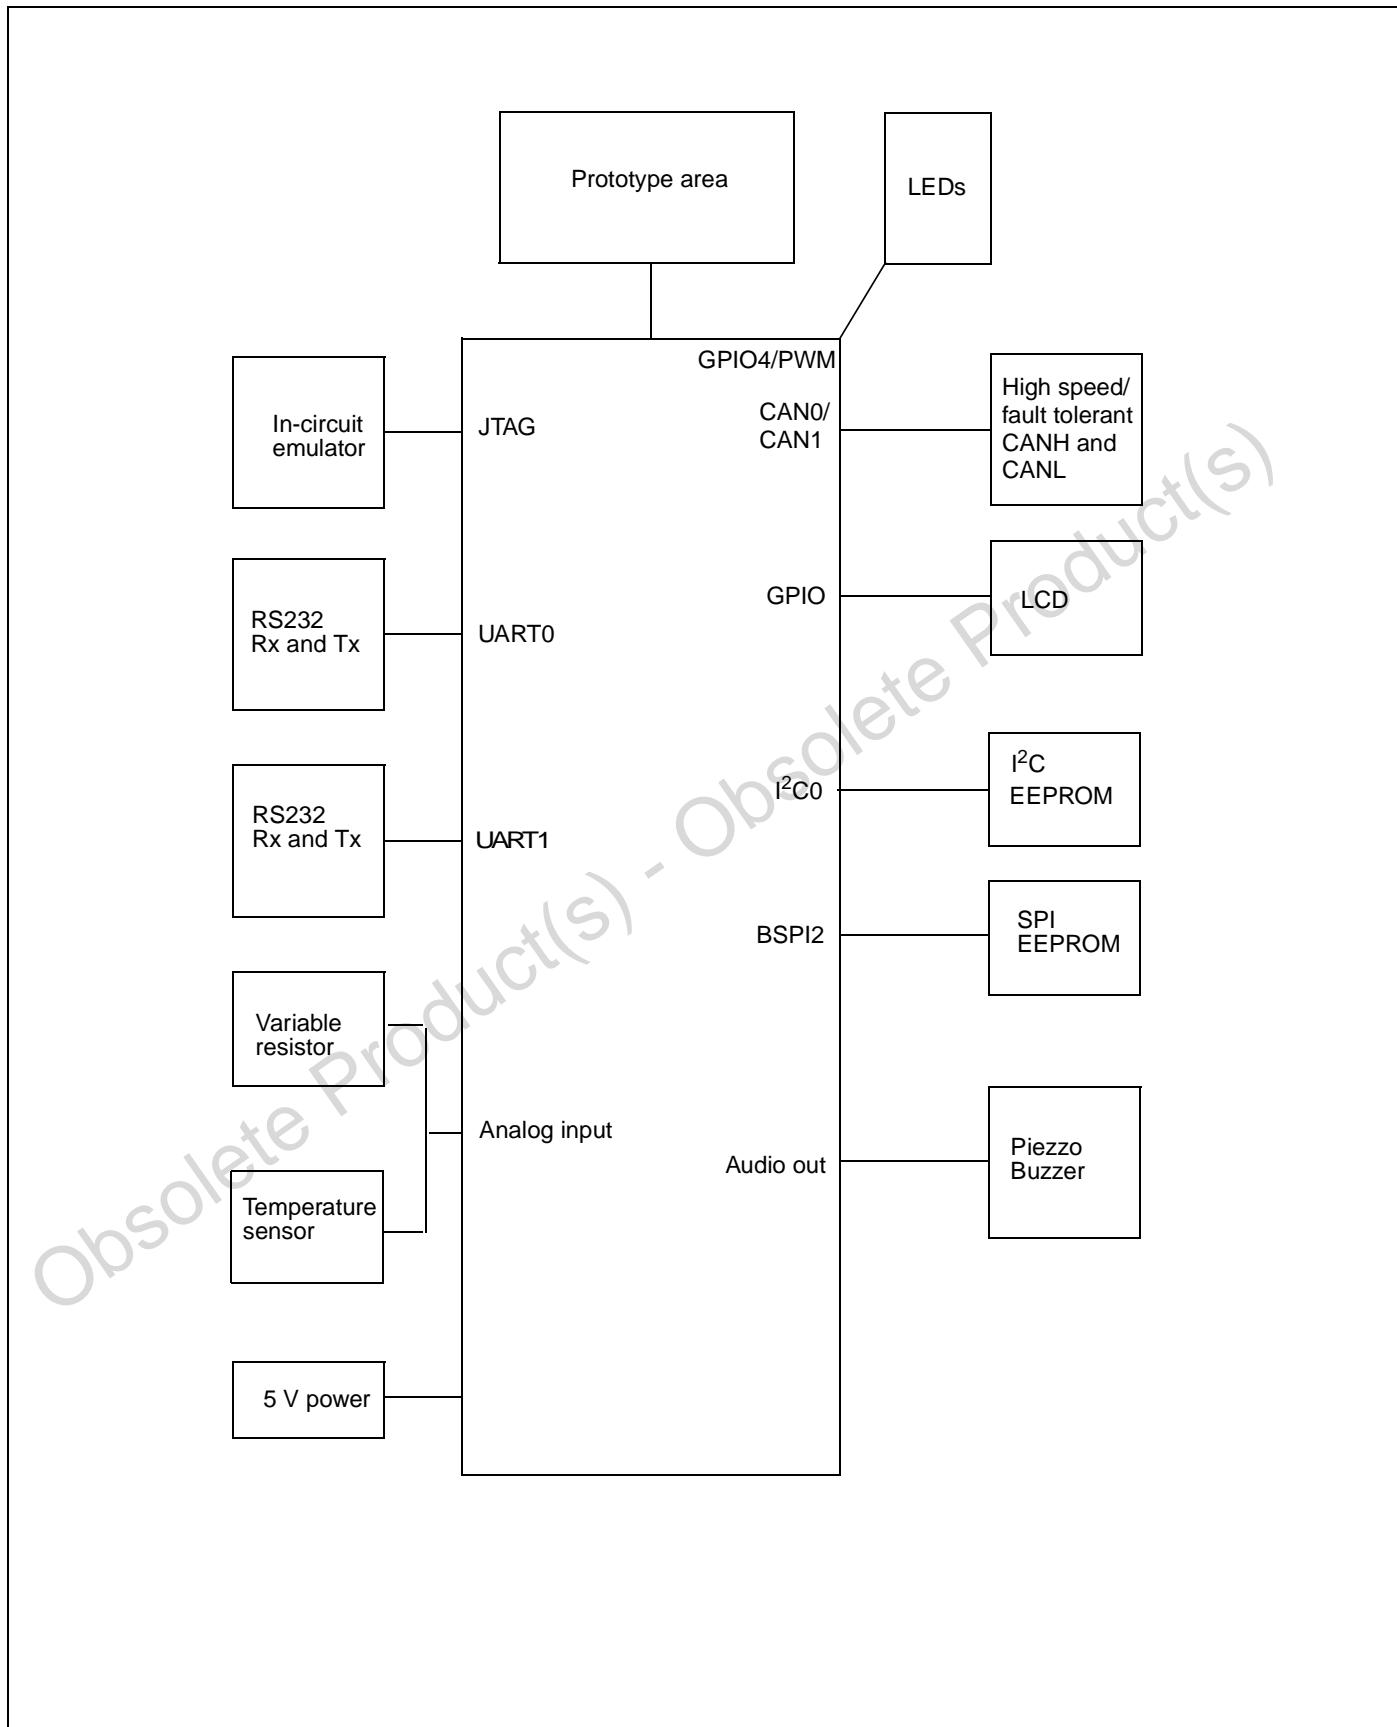

Figure 2: STR730-EVAL board system block diagram

2.1 Overview

The STR730-EVAL board is a general purpose evaluation platform with CAN (controller area network), and RS232 interfaces.

2.2 Processor

The board supports the STR730FZ2T7 ARM7TDMITM silicon - 144-pin TQFP version. This chip runs at a frequency of up to 36 MHz.

Boot modes and configuration options are set using microswitches.

2.3 Debug

Software debug uses a standard 20-pin JTAG connection. This may connect to a standard host to JTAG interface.

2.4 Prototype area

A 2.54 x 2.54 mm gridded area of 1mm holes is available for prototyping using wire wrap or similar prototyping techniques.

2.5 Reset

The Reset sources are:

- power on reset,
- push button reset,
- JTAG reset from an in-circuit emulator.

2.6 Power supplies

Power to the board is supplied using a lump in cord power supply providing 5 V to the board. All other required voltages are provided by on-board voltage regulators.

2.7 CAN interface

A general purpose, asynchronous serial I/O data port connected through a 9-pin D-type male connector with microswitch selectable low speed fault tolerant transceiver (L9669) or low or high speed selectable transceiver (L9616). See [Section 3.1: CAN bus connector on page 15](#).

The L9669 transceiver only works in normal mode, the wake-up functionality is not implemented.

2.8 RS232 serial interfaces

Two general purpose, asynchronous serial I/O data ports are connected through 9-pin D-type male connectors refer to [Section 3.2: RS232 serial data connector on page 15](#).

RS232-A connects directly to UART0, transmit and receive only. RS232-B connects to UART1, transmit and receive only.

RTS is shorted to CTS and DTR is shorted to DSR at the connector for both interfaces.

2.9 Analog input

The following analog inputs are provided, see the schematics [Section 4.1 on page 21](#):

- LM35 temperature sensor IC9 is connected to AIN1,
- variable resistor R33 is connected to AIN0.

2.10 LEDs

Software controlled LEDs

The LEDs in [Table 1](#) are software controlled by PIO pins.

LED	Connected to	Color	Schematic
