Eight Port Managed Industrial Ethernet Switches

User Manual

FCC

This Equipment has been tested and found to comply with the limits for a Class-A digital device, pursuant to Part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

CE

This is a Class-A product. In a domestic environment this product may cause radio interference in which case the user may be required to take adequate measures.

Overview

Introduction

This managed industrial switch comes equipped with a proprietary redundant network protocol—X-Ring which provides an easy way to establish a redundant Ethernet network. With ultra high-speed recovery time (less than 300 ms) and a long MTBF (Mean Time Between Failures) the industrial switch will continue to operate until a Gigabit network infrastructure has been established, without requiring extra upgrade costs.

In addition to 10/100/1000Base-TX fast Ethernet ports, the switch has SFP (mini-GBIC) ports. Traditional RJ-45 ports can be used for up linking short distance (less than 100 m) wide-band paths, while the SFP slots can be used for the application of wideband uploading and long distance transmissions adding flexibility.

Features

- 10/100/1000Base-T Mbps Ethernet ports
- SFP (mini-GBIC) ports (support 100/1000 Dual Mode)
- Full/half duplex flow control
- Auto-negotiation
- MDI/MDI-X auto-crossover
- Packet Buffer up to 1Mbits
- MAC Address up to 8Kbytes
- Surge (EFT) protection (3,000 VDC for power line)
- Ethernet EDS protection (4,000 VDC)
- Power Supply
 - Wide-range Redundant Power Design
 - Reverse Polarity Protection
 - Overload Current Protection
- Case/Installation
 - IP-30 Protection
 - DIN Rail and Panel Mount Design
- Spanning Tree
 - IEEE802.1d Spanning Tree
 - IEEE802.1w Rapid Spanning Tree
- VLAN
 - Port Based VLAN
 - 802.1 Q Tag VLAN
 - GVRP
- X-Ring
 - X-Ring, Dual Homing, Couple Ring and Dual Ring Topology
 - Provide redundant backup feature and the recovery time below 300ms
- Port Trunk with LACP
- QoS (Quality of Service)
 - IEEE 802.1p Class of Service
 - 4 Priority queues per port
 - Port Base, Tag Base and Type of Service Priority
- Bandwidth Control
 - Ingress Packet Filter and Egress Rate Limit
 - Broadcast/Multicast Packet Filter Control
- Port Mirror: Monitor traffic in switched networks.
 - TX Packet only
 - RX Packet only

- Both of TX and RX Packet
- System Event Log
 - System Log Server/Client
 - SMTP e-mail Alert
 - Relay Alarm Output System Events
- Security
 - Port Security: MAC address entries/filter
 - IP Security: IP address security management to prevent intrusion.
 - Login Security: IEEE802.1X/RADIUS
- SNMP Trap
 - Cold Start
 - Power Status
 - Authentication Failure
 - X-Ring topology Change
 - Link up / Link down
- IGMP with Query mode for Multi Media Application
- TFTP Firmware Update and System Configure Restore and Backup

Packing List

- 1 x Managed Industrial Switch
- 1 x RS-232 DB9 to RJ-45 adapter
- 1 x CD Rom with this user manual
- 2 x Mounting Bracket and Screws

Hardware Description

Physical Dimensions (W x H x D)

2.7 x 4.2 x 6.4 in (7.4 x 10.7 x 16.3 cm)

Front Panel

Top View

Wiring the Power Inputs

Insert the positive and negative leads into the V+ and V- contacts on the terminal block connector.

Tighten the wire-clamp screws

Note

Use 12 to 14 AWG wire

Wiring the Fault Alarm Contact

[NOTE] Use 12 to 24 AWG wire.

[NOTE] Relay contacts are normally closed.

[NOTE] The Relay Alarm also requires software configuration. Refer to the Web Based Management Fault Relay Alarm Section.

LED Indicators

LED	Status	Meaning
PWR	Green	The switch is on
	Off	No power available
PWR1	Green	Power Source 1 available
	Off	Power Source 1 unavailable
PWR2	Green	Power Source 2 available
	Off	Power Source 2 unavailable
Fault	Red	Power failure or port failure
	Off	Normal Operation
R.M.	Green	The switch is the master of the X-Ring group
	Off	The switch is not a ring master in the X-Ring group
LNK/ACT (for P9, P10 SFP)	Green	SFP port is linked
	Blinks	Networking is active
	Off	No device attached
P9, P10 (RJ-45)	Green (Upper LED)	Network device detected
	Blinking (Upper LED)	Network is active
	Off (Upper LED)	No device detected
	Green (Lower LED)	The port is operating at speed of 1000M

	Off (lower LED)	The port is disconnected or not operating at speed of 1000M
P1 ~ P8	Green (Upper LED)	Network device detected
	Blinking (Upper LED)	Network is active
	Off (Upper LED)	No device attached
	Yellow (Lower LED)	The port is operating in full-duplex mode
	Blinking (Lower LED)	Data packet collision
	Off (Lower LED)	The port is in half-duplex mode or no device attached

Ports

RJ-45 ports (Auto MDI/MDIX): The RJ-45 ports are auto-sensing for 10Base-T, 100Base-TX or 1000Base-T devices connections and Auto MDI/MDIX.

■ RJ-45 Pin Assignments

Pin Number	Assignment
1	Tx+
2	Tx-
3	Rx+
6	Rx-

All ports on this industrial switch support automatic MDI/MDI-X operation. You can use straight-through cables (See Figure below) for all network connections to PCs or servers, or to other switches or hubs. In straight-through cable, pins 1, 2, 3, and 6, at one end of the cable, are connected straight through to pins 1, 2, 3 and 6 at the other end of the cable. The 10BASE-T/100BASE-TX/1000BASE-T MDI and MDI-X port pin outs are as tabled below.

Pin MDI-X	Signal Name	MDI Signal Name
1	Receive Data plus (RD+)	Transmit Data plus (TD+)
2	Receive Data minus (RD-)	Transmit Data minus (TD-)
3	Transmit Data plus (TD+)	Receive Data plus (RD+)
6	Transmit Data minus (TD-)	Receive Data minus (RD-)

Cabling

Use the four twisted-pair, Category 5e or above cabling for RJ-45 port connection. The cable between the switch and the link partner (switch, hub, workstation, etc.) must be less than 100 meters (328 ft.) long.

The small form-factor pluggable (SFP) is a compact optical transceiver used in optical communications for both telecommunication and data communication applications.

Follow these steps to connect the transceiver and LC Cable:

First, insert the transceiver into the SFP module. A triangle is marked on the bottom of the module.

Transceiver to the SFP module

Transceiver Inserted

Second, insert the fiber cable of LC connector into the transceiver.

LC connector to the transceiver

To remove the LC connector from the transceiver, follow the steps shown below:

First, press the upper side of the LC connector from the transceiver and pull it out to release.

Remove LC connector

Second, push down the metal loop and pull the transceiver out by the plastic part.

Pull out from the SFP module

Mounting Installation

DIN-Rail Mounting

Rear Side

DIN-Rail

1. First, insert the top of DIN-Rail into the track.

2. Then, lightly push the button of DIN-Rail into the track.

3. Ensure the DIN-Rail is tightly on the track.
4. To remove the industrial switch from the track, reverse the steps above.

Panel Mounting

Follow the steps as below to mount the industrial switch with wall mount plate.

1. Remove the DIN-Rail from the industrial switch.
2. Place the panel mount plate on the rear panel.
3. Use the screws to attach the panel mount.
4. Use the hook holes at the corners of the plate to mount the switch to the.
5. To remove the wall mount plate, reverse steps above.

Hardware Installation

Installation Steps

1. Unpack the Industrial switch.
 2. Ensure the DIN-Rail is tightly screwed to the Industrial switch. If not, refer to **DIN-Rail Mounting** section for DIN-Rail installation. To panel mount the Industrial switch, refer to **Panel Mounting** section.
 3. Apply power to the switch (refer to the **Wiring the Power Inputs** section). The power LED will light.
 4. Connect CAT 5 cables to the Industrial switch's RJ-45 ports and to the network devices.
- [NOTE]** If the network devices do not support MID/MDIX, a crossover cable may be required.

5. Connect the fiber optic cables to the industrial switch and network device. Ensure that the switch's fiber optic transmitter is connected to the network devices receiver and vice versa.
6. Connect the fiber optic cables.
7. When all the connections are made and the LEDs show normal indications, the installation is complete.

X-Ring Application

This switch incorporates the X-Ring Protocol to ensure network reliability and system restoration within 300 ms in the event of a connection failure. The X-Ring algorithm is similar to the spanning tree protocol (STP) algorithm but it has faster recovery time. The following figure below is an example of an X-Ring application.

Coupling Ring Application

If the network has more than one X-Ring group, the coupling ring function is used to connect them and add redundancy. This ensures that transmissions between the two ring groups will not fail. The figure below is an example of the coupling ring application.

Dual Homing Application

The Dual Homing function is used to prevent a connection loss between the X-Ring group and the upper level/core switch. Assign a port in each X-ring group to be the Dual Homing ports. The Dual Homing function can only be used when the X-Ring function is active. Each X-Ring group can have one Dual Homing port. Note: The upper level switches must have RSTP enabled.

Console Management

Connecting to the Console Port

Attach the DB9 end to a PC or terminal and the RJ-45 end to the console port on the switch. The PC must have support a terminal emulation program.

Pin Assignment

DB9 Connector	RJ-45 Connector
NC	1 Orange/White
2	2 Orange
3	3 Green/White
NC	4 Blue
5	5 Blue/White
NC	6 Green
NC	7 Brown/White
NC	8 Brown

Login in the Console Interface

When the connection between Switch and PC is ready, turn on the PC, run a terminal emulation program or Hyper Terminal, and configure the following communication parameters:

Baud Rate: 9600 bps

Data Bits: 8

Parity: none

Stop Bit: 1

Flow control: None

The settings of communication parameters

After entering the parameter, click '**OK**'. When the blank screen shows up, press Enter on the PC keyboard. A login screen will be displayed. Enter '**root**' for the User name and Password.

Console login interface

CLI Management

After you login to the system, you will see a command prompt. To enter CLI management interface, type '**enable**' and press enter.

```
switch>enable  
switch#_
```

CLI command interface

Commands Level

Modes	Access Method	Prompt	Exit Method	About This Mode1
User EXEC	Begin a session with your switch.	switch>	Enter logout or quit.	The user commands available at the user level are a subset of those available at the privileged level. Use this mode to <ul style="list-style-type: none"> • Perform basic tests. • Displays system information.
Privileged EXEC	Enter the enable command while in user EXEC mode.	switch#	Enter disable to exit.	The privileged command is advance mode Privileged this mode to <ul style="list-style-type: none"> • Displays advance function status • Save configures
Global Configuration	Enter the configure command while in privileged EXEC mode.	switch (config)#	To exit to privileged EXEC mode, enter exit or end	Use this mode to configure parameters that apply to your switch as a whole.
VLAN database	Enter the vlan database command while in privileged EXEC mode.	switch (vlan)#	To exit to user EXEC mode, enter exit.	Use this mode to configure VLAN-specific parameters.
Interface configuration	Enter the interface of fast Ethernet	switch (config-if)#	To exit to global configuration	Use this mode to configure parameters for the switch and

	command (with a specific interface) while in global configuration mode		n mode, enter exit. To exist to privileged EXEC mode, or end.	Ethernet ports.

Commands Set List

System Commands Set

Commands	Level	Description	Example
show config	E	Show switch configuration	switch> show config
show terminal	P	Show console information	switch# show terminal
write memory	P	Save user configuration into permanent memory (flash ROM)	switch# write memory
system name [System Name]	G	Configure system name	switch(config)# system name xxx
system location [System Location]	G	Set switch system location string	switch(config)# system location xxx
system description [System Description]	G	Set switch system description string	switch(config)# system description xxx
system contact [System Contact]	G	Set switch system contact window string	switch(config)# system contact xxx
show system-info	E	Show system information	switch> show system-info
ip address [Ip-address] [Subnet-mask]	G	Configure the IP address of switch	switch(config)# ip address 192.168.16.1 255.255.255.0 192.168.16.254

[Gateway]			
ip dhcp	G	Enable DHCP client function of switch	switch(config)# ip dhcp
show ip	P	Show IP information of switch	switch# show ip
no ip dhcp	G	Disable DHCP client function of switch	switch(config)# no ip dhcp
reload	G	Halt and perform a cold restart	switch(config)# reload
default	G	Restore to default	switch(config)# default
admin username [Username]	G	Changes a login username. (maximum 10 words)	switch(config)# admin username xxxxxx
admin password [Password]	G	Specifies a password (maximum 10 words)	switch(config)# admin password xxxxxx
show admin	P	Show administrator information	switch# show admin
dhcpserver enable	G	Enable DHCP Server	switch(config)# dhcpserver enable
Dhcpserver disable	G	Disable DHCP Server	switch(config)# no dhcpserver
dhcpserver lowip [Low IP]	G	Configure low IP address for IP pool	switch(config)# dhcpserver lowip 192.168.1.100
dhcpserver highip [High IP]	G	Configure high IP address for IP pool	switch(config)# dhcpserver highip 192.168.1.200
dhcpserver subnetmask [Subnet mask]	G	Configure subnet mask for DHCP clients	switch(config)# dhcpserver subnetmask 255.255.255.0
dhcpserver gateway [Gateway]	G	Configure gateway for DHCP clients	switch(config)# dhcpserver gateway 192.168.1.254
dhcpserver dnsip [DNS IP]	G	Configure DNS IP for DHCP clients	switch(config)# dhcpserver dnsip 192.168.1.1
dhcpserver leasetime [Hours]	G	Configure lease time (in hour)	switch(config)# dhcpserver leasetime 1
dhcpserver ipbinding [IP address]	I	Set static IP for DHCP clients by port	switch(config)# interface fastEthernet 2 switch(config)# dhcpserver ipbinding 192.168.1.1

show dhcpserver configuration	P	Show configuration of DHCP server	switch# show dhcpserver configuration
show dhcpserver clients	P	Show client entries of DHCP server	switch# show dhcpserver clients
show dhcpserver ip-binding	P	Show IP-Binding information of DHCP server	switch# show dhcpserver ip-binding
no dhcpserver	G	Disable DHCP server function	switch(config)# no dhcpserver
security enable	G	Enable IP security function	switch(config)# security enable
security http	G	Enable IP security of HTTP server	switch(config)# security http
security telnet	G	Enable IP security of telnet server	switch(config)# security telnet
security ip [Index(1..10)] [IP Address]	G	Set the IP security list	switch(config)# security ip 1 192.168.1.55
show security	P	Show the information of IP security	switch# show security
no security	G	Disable IP security function	switch(config)# no security
no security http	G	Disable IP security of HTTP server	switch(config)# no security http
no security telnet	G	Disable IP security of telnet server	switch(config)# no security telnet

Port Commands Set

Commands	Level	Description	Example
interface fastEthernet [Portid]	G	Choose the port for modification.	switch(config)# interface fastEthernet 2
duplex [full half]	I	Use the duplex configuration command to specify the duplex mode of operation for Fast Ethernet.	switch(config)# interface fastEthernet 2 switch(config-if)# duplex full
speed [10 100 1000 auto]	I	Use the speed configuration command to specify the speed mode of operation for Fast Ethernet., the speed can't be set to 1000 if the port isn't a giga port.	switch(config)# interface fastEthernet 2 switch(config-if)# speed 100
no flowcontrol	I	Disable flow control of interface	switch(config-if)# no flowcontrol
security enable	I	Enable security of interface	switch(config)# interface fastEthernet 2 switch(config-if)# security enable
no security	I	Disable security of interface	switch(config)# interface fastEthernet 2 switch(config-if)# no security
bandwidth type all	I	Set interface ingress limit frame type to 'accept all frame'	switch(config)# interface fastEthernet 2 switch(config-if)# bandwidth type all

bandwidth type broadcast-multicast-flooded-unicast	I	Set interface ingress limit frame type to 'accept broadcast, multicast, and flooded unicast frame'	switch(config)#interface fastEthernet 2 switch(config-if)#bandwidth type broadcast-multicast-flooded-unicast
bandwidth type broadcast-multicast	I	Set interface ingress limit frame type to 'accept broadcast and multicast frame'	switch(config)#interface fastEthernet 2 switch(config-if)#bandwidth type broadcast-multicast
bandwidth type broadcast-only	I	Set interface ingress limit frame type to 'only accept broadcast frame'	switch(config)#interface fastEthernet 2 switch(config-if)#bandwidth type broadcast-only
bandwidth in [Value]	I	Set interface input bandwidth. Rate Range is from 100 kbps to 102400 kbps or to 256000 kbps for giga ports, and zero means no limit.	switch(config)#interface fastEthernet 2 switch(config-if)#bandwidth in 100
bandwidth out [Value]		Set interface output bandwidth. Rate Range is from 100 kbps to 102400 kbps or to 256000 kbps for giga ports, and zero means no limit.	switch(config)#interface fastEthernet 2 switch(config-if)#bandwidth out 100
show bandwidth	I	Show interfaces bandwidth control	switch(config)#interface fastEthernet 2 switch(config-if)#show bandwidth
state	I	Use the state interface	switch(config)#interface

[Enable Disable]		configuration command to specify the state mode of operation for Ethernet ports. Use the disable form of this command to disable the port.	fastEthernet 2 (config-if)# state Disable
show interface configuration	I	show interface configuration status	switch(config)# interface fastEthernet 2 switch(config-if)# show interface configuration
show interface status	I	show interface actual status	switch(config)# interface fastEthernet 2 (config-if)# show interface status
show interface accounting	I	show interface statistic counter	switch(config)# interface fastEthernet 2 (config-if)# show interface accounting
no accounting	I	Clear interface accounting information	switch(config)# interface fastEthernet 2 switch(config-if)# no accounting

Trunk Commands Set

Commands	Level	Description	Example
aggregator priority [1~65535]	G	Set port group system priority	switch(config)# aggregator priority 22
aggregator activityport [Group ID] [Port Numbers]	G	Set activity port	switch(config)# aggregator activityport 2
aggregator group [GroupID] [Port-list] lacp workp [Workport]	G	Assign a trunk group with LACP active. [GroupID] :1~4 [Port-list]:Member port list, This parameter	switch(config)# aggregator group 1 1-4 lacp workp 2 or switch(config)# aggregator group 2 1,4,3 lacp workp 3

		could be a port range(ex.1-4) or a port list separate by a comma(ex.2, 3, 6) [Workport]: The amount of work ports, this value could not be less than zero or be large than the amount of member ports.	
aggregator group [GroupID] [Port-list] nolacp	G	Assign a static trunk group. [GroupID] :1~4 [Port-list]:Member port list, This parameter could be a port range(ex.1-4) or a port list separate by a comma(ex.2, 3, 6)	switch(config)# aggregator group 1 2-4 nolacp or switch(config)# aggregator group 1 3,1,2 nolacp
show aggregator	P	Show the information of trunk group	switch# show aggregator 1 or switch# show aggregator 2 or switch# show aggregator 3
no aggregator lacp [GroupID]	G	Disable the LACP function of trunk group	switch(config)# no aggregator lacp 1
no aggregator group [GroupID]	G	Remove a trunk group	switch(config)# no aggregator group 2

VLAN Commands Set

Commands	Level	Description	Example
vlan database	P	Enter VLAN configure mode	switch# vlan database

vlanmode [portbase] 802.1q gvrp]	V	To set switch VLAN mode.	switch(vlan)# vlanmode portbase or switch(vlan)# vlanmode 802.1q or switch(vlan)# vlanmode gvrp
no vlan	V	No VLAN	Switch(vlan)# no vlan
Ported based VLAN configuration			
vlan port-based grpname [Group Name] grpid [GroupID] port [PortNumbers]	V	Add new port based VLAN	switch(vlan)# vlan port-based grpname test grpid 2 port 2-4 or switch(vlan)# vlan port-based grpname test grpid 2 port 2,3,4
show vlan [GroupID] or show vlan	V	Show VLAN information	switch(vlan)# show vlan 23
no vlan group [GroupID]	V	Delete port base group ID	switch(vlan)# no vlan group 2
IEEE 802.1Q VLAN			
vlan 8021q name [GroupName] vid [VID]	V	Change the name of VLAN group, if the group didn't exist, this command can't be applied.	switch(vlan)# vlan 8021q name test vid 22
vlan 8021q port [PortNumber] access-link untag [UntaggedVID]	V	Assign a access link for VLAN by port, if the port belong to a trunk group, this command can't be applied.	switch(vlan)# vlan 8021q port 3 access-link untag 33
vlan 8021q port [PortNumber] trunk-link tag [TaggedVID List]	V	Assign a trunk link for VLAN by port, if the port belong to a trunk group, this command can't be applied.	switch(vlan)# vlan 8021q port 3 trunk-link tag 2,3,6,99 or switch(vlan)# vlan 8021q port 3 trunk-link tag 3-20

vlan 8021q port [PortNumber] hybrid-link untag [UntaggedVID] tag [TaggedVID List]	V	Assign a hybrid link for VLAN by port, if the port belong to a trunk group, this command can't be applied.	switch(vlan)# vlan 8021q port 3 hybrid-link untag 4 tag 3,6,8 or switch(vlan)# vlan 8021q port 3 hybrid-link untag 5 tag 6-8
vlan 8021q trunk [PortNumber] access-link untag [UntaggedVID]	V	Assign a access link for VLAN by trunk group	switch(vlan)# vlan 8021q trunk 3 access-link untag 33
vlan 8021q trunk [PortNumber] trunk-link tag [TaggedVID List]	V	Assign a trunk link for VLAN by trunk group	switch(vlan)# vlan 8021q trunk 3 trunk-link tag 2,3,6,99 or switch(vlan)# vlan 8021q trunk 3 trunk-link tag 3-20
vlan 8021q trunk [PortNumber] hybrid-link untag [UntaggedVID] tag [TaggedVID List]	V	Assign a hybrid link for VLAN by trunk group	switch(vlan)# vlan 8021q trunk 3 hybrid-link untag 4 tag 3,6,8 or switch(vlan)# vlan 8021q trunk 3 hybrid-link untag 5 tag 6-8
show vlan [GroupID] or show vlan	V	Show VLAN information	switch(vlan)# show vlan 23
no vlan group [GroupID]	V	Delete port base group ID	switch(vlan)# no vlan group 2

Spanning Tree Commands Set

Commands	Level	Description	Example
spanning-tree enable	G	Enable spanning tree	switch(config)# spanning-tree enable
spanning-tree priority [0~61440]	G	Configure spanning tree priority parameter	switch(config)# spanning-tree priority 32767
spanning-tree max-age [seconds]	G	Use the spanning-tree max-age global configuration command to change	switch(config)# spanning-tree max-age 15

		the interval between messages the spanning tree receives from the root switch. If a switch does not receive a bridge protocol data unit (BPDU) message from the root switch within this interval, it recomputes the Spanning Tree Protocol (STP) topology.	
spanning-tree hello-time [seconds]	G	Use the spanning-tree hello-time global configuration command to specify the interval between hello bridge protocol data units (BPDUs).	switch(config)# spanning-tree hello-time 3
spanning-tree forward-time [seconds]	G	Use the spanning-tree forward-time global configuration command to set the forwarding-time for the specified spanning-tree instances. The forwarding time determines how long each of the listening and learning states last before the port begins	switch(config)# spanning-tree forward-time 20

		forwarding.	
stp-path-cost [1~200000000]	I	Use the spanning-tree cost interface configuration command to set the path cost for Spanning Tree Protocol (STP) calculations. In the event of a loop, spanning tree considers the path cost when selecting an interface to place into the forwarding state.	switch(config)#interface fastEthernet 2 switch(config-if)# stp-path-cost 20
stp-path-priority [Port Priority]	I	Use the spanning-tree port-priority interface configuration command to configure a port priority that is used when two switches tie for position as the root switch.	switch(config)#interface fastEthernet 2 switch(config-if)# stp-path-priority 128
stp-admin-p2p [Auto True False]	I	Admin P2P of STP priority on this interface.	switch(config)#interface fastEthernet 2 switch(config-if)# stp-admin-p2p Auto
stp-admin-edge [True False]	I	Admin Edge of STP priority on this interface.	switch(config)#interface fastEthernet 2 switch(config-if)# stp-admin-edge True

stp-admin-non-stp [True False]	I	Admin NonSTP of STP priority on this interface.	switch(config)# interface fastEthernet 2 switch(config-if)# stp-admin-non-stp False
show spanning-tree	E	Displays a summary of the spanning-tree states.	switch> show spanning-tree
no spanning-tree	G	Disable spanning-tree.	switch(config)# no spanning-tree

QOS Commands Set

Commands	Level	Description	Example
qos policy [weighted-fair strict]	G	Select QOS policy scheduling	switch(config)# qos policy weighted-fair
qos prioritytype [port-based cos-only tos -only cos-first tos-first]	G	Setting of QOS priority type	switch(config)# qos prioritytype
qos priority portbased [Port] [lowest low middle high]	G	Configure Port-based Priority	switch(config)# qos priority portbased 1 low
qos priority cos [Priority][lowest low middle high]	G	Configure COS Priority	switch(config)# qos priority cos 0 middle
qos priority tos [Priority][lowest low middle high]	G	Configure TOS Priority	switch(config)# qos priority tos 3 high
show qos	P	Displays the information of QoS configuration	Switch# show qos
no qos	G	Disable QoS function	switch(config)# no qos

IGMP Commands Set

Commands	Level	Description	Example
igmp enable	G	Enable IGMP snooping function	switch(config)# igmp enable
lgmp-query auto	G	Set IGMP query to	switch(config)# lgmp-query auto

		auto mode	
igmp-query force	G	Set IGMP query to force mode	switch(config)# igmp-query force
show igmp configuration	P	Displays the details of an IGMP configuration.	switch# show igmp configuration
show igmp multi	P	Displays the details of an IGMP snooping entries.	switch# show igmp multi
no igmp	G	Disable IGMP snooping function	switch(config)# no igmp
no igmp-query	G	Disable IGMP query	switch# no igmp-query

Mac / Filter Table Commands Set

Commands	Level	Description	Example
mac-address-table static hwaddr [MAC]	I	Configure MAC address table of interface (static).	switch(config)# interface fastEthernet 2 switch(config-if)# mac-address-table static hwaddr 000012345678
mac-address-table filter hwaddr [MAC]	G	Configure MAC address table(filter)	switch(config)# mac-address-table filter hwaddr 000012348678
show mac-address-table	P	Show all MAC address table	switch# show mac-address-table
show mac-address-table static	P	Show static MAC address table	switch# show mac-address-table static
show mac-address-table filter	P	Show filter MAC address table.	switch# show mac-address-table filter
no mac-address-table static hwaddr [MAC]	I	Remove an entry of MAC address table of interface (static)	switch(config)# interface fastEthernet 2 switch(config-if)# no mac-address-table static hwaddr

			000012345678
no mac-address-table filter hwaddr [MAC]	G	Remove an entry of MAC address table (filter)	switch(config)# no mac-address-table filter hwaddr 000012348678
no mac-address-table	G	Remove dynamic entry of MAC address table	switch(config)# no mac-address-table

SNMP Commands Set

Commands	Level	Description	Example
snmp system-name [System Name]	G	Set SNMP agent system name	switch(config)# snmp system-name I2switch
snmp system-location [System Location]	G	Set SNMP agent system location	switch(config)# snmp system-location lab
snmp system-contact [System Contact]	G	Set SNMP agent system contact	switch(config)# snmp system-contact where
snmp agent-mode [v1v2c v3 v1v2cv3]	G	Select the agent mode of SNMP	switch(config)# snmp agent-mode v1v2cv3
snmp community-strings [Community] right [RO/RW]	G	Add SNMP community string.	switch(config)# snmp community-strings public right rw
snmp-server host [IP address] community [Community-string] trap-version [v1 v2c]	G	Configure SNMP server host information and community string	switch(config)# snmp-server host 192.168.1.50 community public trap-version v1 (remove) Switch(config)# no snmp-server host 192.168.1.50
snmpv3 context-name [Context Name]	G	Configure the context name	switch(config)# snmpv3 context-name Test
snmpv3 user [User Name] group	G	Configure the userprofile for SNMPV3 agent.	switch(config)# snmpv3 user test01 group G1 password AuthPW PrivPW

[Group Name] password [Authentication Password] [Privacy Password]		Privacy password could be empty.	
snmpv3 access context-name [Context Name] group [Group Name] security-level [NoAuthNoPriv AuthNoP riv AuthPriv] match-rule [Exact Prefix] views [Read View Name] [Write View Name] [Notify View Name]	G	Configure the access table of SNMPV3 agent	switch(config)# snmpv3 access context-name Test group G1 security-level AuthPriv match-rule Exact views V1 V1 V1
snmpv3 mibview view [View Name] type [Excluded Included] sub-oid [OID]	G	Configure the mibview table of SNMPV3 agent	switch(config)# snmpv3 mibview view V1 type Excluded sub-oid 1.3.6.1
show snmp	P	Show SNMP configuration	switch# show snmp
no snmp community-strings [Community]	G	Remove the specified community.	switch(config)# no snmp community-strings public
no snmp-server host [Host-address]	G	Remove the SNMP server host.	switch(config)# no snmp-server 192.168.1.50
no snmpv3 user	G	Remove specified user	switch(config)# no snmpv3 user

[User Name]		of SNMPv3 agent.	Test
no snmpv3 access context-name [Context Name] group [Group Name] security-level [NoAuthNoPriv AuthNoP riv AuthPriv] match-rule [Exact Prefix] views [Read View Name] [Write View Name] [Notify View Name]	G	Remove specified access table of SNMPv3 agent.	switch(config)# no snmpv3 access context-name Test group G1 security-level AuthPriv match-rule Exact views V1 V1 V1
no snmpv3 mibview view [View Name] type [Excluded Included] sub-oid [OID]	G	Remove specified mibview table of SNMPV3 agent.	switch(config)# no snmpv3 mibview view V1 type Excluded sub-oid 1.3.6.1

Port Mirroring Commands Set

Commands	Level	Description	Example
monitor rx	G	Set RX destination port of monitor function	switch(config)# monitor rx
monitor tx	G	Set TX destination port of monitor function	switch(config)# monitor tx
show monitor	P	Show port monitor information	switch# show monitor
monitor [RX TX Both]	I	Configure source port of monitor function	switch(config)# interface fastEthernet 2 switch(config-if)# monitor RX

show monitor	I	Show port monitor information	switch(config)# interface fastEthernet 2 switch(config-if)# show monitor
no monitor	I	Disable source port of monitor function	switch(config)# interface fastEthernet 2 switch(config-if)# no monitor

802.1x Commands Set

Commands	Level	Description	Example
8021x enable	G	Use the 802.1x global configuration command to enable 802.1x protocols.	switch(config)# 8021x enable
8021x system radiusip [IP address]	G	Use the 802.1x system radius IP global configuration command to change the radius server IP.	switch(config)# 8021x system radiusip 192.168.1.1
8021x system serverport [port ID]	G	Use the 802.1x system server port global configuration command to change the radius server port	switch(config)# 8021x system serverport 1815
8021x system accountport [port ID]	G	Use the 802.1x system account port global configuration command to change the accounting port	switch(config)# 8021x system accountport 1816
8021x system sharekey [ID]	G	Use the 802.1x system share key global configuration command to change the shared key value.	switch(config)# 8021x system sharekey 123456

8021x system nasid [words]	G	Use the 802.1x system nasid global configuration command to change the NAS ID	switch(config)# 8021x system nasid test1
8021x misc quietperiod [sec.]	G	Use the 802.1x misc quiet period global configuration command to specify the quiet period value of the switch.	switch(config)# 8021x misc quietperiod 10
8021x misc txperiod [sec.]	G	Use the 802.1x misc TX period global configuration command to set the TX period.	switch(config)# 8021x misc txperiod 5
8021x misc supporttimeout [sec.]	G	Use the 802.1x misc supp timeout global configuration command to set the supplicant timeout.	switch(config)# 8021x misc supporttimeout 20
8021x misc servertimeout [sec.]	G	Use the 802.1x misc server timeout global configuration command to set the server timeout.	switch(config)# 8021x misc servertimeout 20
8021x misc maxrequest [number]	G	Use the 802.1x misc max request global configuration command to set the MAX requests.	switch(config)# 8021x misc maxrequest 3
8021x misc reauthperiod [sec.]	G	Use the 802.1x misc reauth period global configuration	switch(config)# 8021x misc reauthperiod 3000

		command to set the reauth period.	
8021x portstate [disable reject accept authorize]	I	Use the 802.1x port state interface configuration command to set the state of the selected port.	switch(config)# interface fastethernet 3 switch(config-if)# 8021x portstate accept
show 8021x	E	Displays a summary of the 802.1x properties and also the port states.	switch> show 8021x
no 8021x	G	Disable 802.1x function	switch(config)# no 8021x

TFTP Commands Set

Commands	Level	Description	Defaults Example
backup flash:backup_cfg	G	Save configuration to TFTP and need to specify the IP of TFTP server and the file name of image.	switch(config)# backup flash:backup_cfg
restore flash:restore_cfg	G	Get configuration from TFTP server and need to specify the IP of TFTP server and the file name of image.	switch(config)# restore flash:restore_cfg
upgrade flash:upgrade_fw	G	Upgrade firmware by TFTP and need to specify the IP of TFTP server and the file name of image.	switch(config)# upgrade flash:upgrade_fw

SystemLog, SMTP and Event Commands Set

Commands	Level	Description	Example
systemlog ip [IP address]	G	Set System log server IP address.	switch(config)# systemlog ip 192.168.1.100
systemlog mode [client server both]	G	Specified the log mode	switch(config)# systemlog mode both
show systemlog	E	Displays system log.	Switch> show systemlog
show systemlog	P	Show system log client & server information	switch# show systemlog
no systemlog	G	Disable systemlog functon	switch(config)# no systemlog
smtp enable	G	Enable SMTP function	switch(config)# smtp enable
smtp serverip [IP address]	G	Configure SMTP server IP	switch(config)# smtp serverip 192.168.1.5
smtp authentication	G	Enable SMTP authentication	switch(config)# smtp authentication
smtp account [account]	G	Configure authentication account	switch(config)# smtp account User
smtp password [password]	G	Configure authentication password	switch(config)# smtp password
smtp rcptemail [Index] [Email address]	G	Configure Rcpt e-mail Address	switch(config)# smtp rcptemail 1 Alert@test.com
show smtp	P	Show the information of SMTP	switch# show smtp
no smtp	G	Disable SMTP function	switch(config)# no smtp
event device-cold-start [Systemlog SMTP Both]	G	Set cold start event type	switch(config)# event device-cold-start both
event authentication-failure [Systemlog SMTP Both]	G	Set Authentication failure event type	switch(config)# event authentication-failure both
event X-ring-topology-change	G	Set X-ring topology changed event type	switch(config)# event X-ring-topology-change both

[Systemlog SMTP Both]			
event systemlog [Link-UP Link-Down Both] h]	I	Set port event for system log	switch(config)#interface fastethernet 3 switch(config-if)# event systemlog both
event smtp [Link-UP Link-Down Both] h]	I	Set port event for SMTP	switch(config)#interface fastethernet 3 switch(config-if)# event smtp both
show event	P	Show event selection	switch# show event
no event device-cold-start	G	Disable cold start event type	switch(config)# no event device-cold-start
no event authentication-failure	G	Disable Authentication failure event typ	switch(config)# no event authentication-failure
no event X-ring-topology-change	G	Disable X-ring topology changed event type	switch(config)# no event X-ring-topology-change
no event systemlog	I	Disable port event for system log	switch(config)#interface fastethernet 3 switch(config-if)# no event systemlog
no event smpt	I	Disable port event for SMTP	switch(config)#interface fastethernet 3 switch(config-if)# no event smtp
show systemlog	P	Show system log client & server information	switch# show systemlog

SNTP Commands Set

Commands	Level	Description	Example
sntp enable	G	Enable SNTP function	switch(config)# sntp enable
sntp daylight	G	Enable daylight saving time, if SNTP function is inactive, this command can't be	switch(config)# sntp daylight

		applied.	
sntp daylight-period [Start time] [End time]	G	Set period of daylight saving time, if SNTP function is inactive, this command can't be applied. Parameter format: [yyyymmdd-hh:mm]	switch(config)# sntp daylight-period 20060101-01:01 20060202-01-01
sntp daylight-offset [Minute]	G	Set offset of daylight saving time, if SNTP function is inactive, this command can't be applied.	switch(config)#sntp daylight-offset 3
sntp ip [IP]	G	Set SNTP server IP, if SNTP function is inactive, this command can't be applied.	switch(config)# sntp ip 192.169.1.1
sntp timezone [Timezone]	G	Set timezone index, use 'show sntp timzeone' command to get more information of index number	switch(config)# sntp timezone 22
show sntp	P	Show SNTP information	switch# show sntp
show sntp timezone	P	Show index number of time zone list	switch# show sntp timezone
no sntp	G	Disable SNTP function	switch(config)# no sntp
no sntp daylight	G	Disable daylight saving time	switch(config)# no sntp daylight

X-ring Commands Set

Commands	Level	Description	Example
----------	-------	-------------	---------

Xring enable	G	Enable X-ring	switch(config)# Xring enable
Xring master	G	Enable ring master	switch(config)# Xring master
Xring couplering	G	Enable couple ring	switch(config)# Xring couplering
Xring dualhomming	G	Enable dual homing	switch(config)# Xring dualhomming
Xring ringport [1st Ring Port] [2nd Ring Port]	G	Configure 1st/2nd Ring Port	switch(config)# Xring ringport 7 8
Xring couplingport [Coupling Port]	G	Configure Coupling Port	switch(config)# Xring couplingport 1
Xring controlport [Control Port]	G	Configure Control Port	switch(config)# Xring controlport 2
Xring homingport [Dual Homing Port]	G	Configure Dual Homing Port	switch(config)# Xring homingport 3
show Xring	P	Show the information of X - Ring	switch# show Xring
no Xring	G	Disable X-ring	switch(config)# no X ring
no Xring master	G	Disable ring master	switch(config)# no Xring master
no Xring couplering	G	Disable couple ring	switch(config)# no Xring couplering
no Xring dualhomming	G	Disable dual homing	switch(config)# no Xring dualhomming

Web-Based Management

About Web-based Management

The switch has an embedded HTML web site residing in flash memory. This site offers advanced management features and allows the switch to be configured from anywhere on the network.

The web site is designed for Internet Explorer 6.0 and uses Java Applets to reduce bandwidth consumption, enhance access speed, and present an intuitive user interface.

Preparing for Web Management

Before using web management, install the industrial switch on the network and verify that a PC on the local network can connect with the switch through the web browser. The default IP Address, Subnet Mask, Username and Password is listed below:

- IP Address: **192.168.16.1**
- Subnet Mask: **255.255.255.0**
- Default Gateway: **192.168.16.254**
- User Name: **root**
- Password: **root**

System Login

1. Launch the Internet Explorer on the PC
2. Key in ‘[http:// + the IP address of the switch](http://192.168.16.1/)’, and then Press ‘Enter’.

3. The login screen will appear
4. Enter the user name and password. The default user name and password are '**root**'.
5. Press '**Enter**' or '**OK**', and then the home screen will appear.

Login screen

Main interface

- [Port](#)
- [Protocol](#)
- [Security](#)
- [Factory Default](#)
- [Save Configuration](#)
- [System Reboot](#)

Main interface

System Information

- **System Name:** A name (64 bytes max) can be assigned to the switch.
- **System Description:** Displays the description of switch. Read only cannot be modified
- **System Location:** A physical location (64 bytes max) can be assigned to the switch.
- **System Contact:** Enter the name of contact person or organization
- **Firmware Version:** Displays the switch's firmware version
- **Kernel Version:** Displays the kernel software version
- **MAC Address:** Displays the unique hardware address assigned by manufacturer (default)

IP Configuration

Configure the IP Settings and DHCP client function

- **DHCP Client:** Used to enable or disable the DHCP client function. When enabled, the switch's IP address is assigned by the network DHCP server. **The default IP address will be replace by the DHCP server assigned IP address.** After clicking the 'Apply' button, a popup dialog will indicate that the current IP will be lost and the new IP address must be retrieved from the DHCP server.
- **IP Address:** A static IP Address may be assigned. The default IP is 192.168.16.1.
- **Subnet Mask:** Assign the subnet mask of the IP address. This does not have to be done if the DHCP client function is enabled.
- **Gateway:** Assign the network gateway. The default gateway is 192.168.16.254.
- **DNS1:** Assign the primary DNS IP address.
- **DNS2:** Assign the secondary DNS IP address.
- Click

IP Configuration

DHCP Client :

IP Address	192.168.16.1
Subnet Mask	255.255.255.0
Gateway	192.168.16.254
DNS1	0.0.0.0
DNS2	0.0.0.0

IP configuration interface

DHCP Server – System configuration

The switch can function as a DHCP server.

- **DHCP Server:** Enable or Disable the DHCP Server function.
- **Low IP Address:** the dynamic IP assign range. Low IP address is the beginning of the dynamic IP assignment range.
- **High IP Address:** the dynamic IP assign range. High IP address is the end of the dynamic IP assignment range.
- **Subnet Mask:** The subnet mask.
- **Gateway:** The network gateway.
- **DNS:** Network Domain Name Server IP Address.
- **Lease Time (sec):** The time interval at which that system will reset the dynamic IP assignment.
- Click

DHCP Server - System Configuration

DHCP Server - Client Entries

System Configuration		Client Entries		Port and IP Binding	
IP addr	Client ID	Type	Status	Lease	

DHCP Client Entries interface

DHCP Server - Port and IP Bindings

You can assign a specific IP address that is in the dynamic IP assignment range to the specific port. When the device is connected to the port and asks for an assignment, the system will assign this IP address.

DHCP Server - Port and IP Binding

System Configuration		Client Entries		Port and IP Binding	
Port	IP	Port	IP	Port	IP
Port.01	0.0.0.0	Port.02	0.0.0.0	Port.03	0.0.0.0
Port.04	0.0.0.0	Port.05	0.0.0.0	Port.06	0.0.0.0
Port.07	0.0.0.0	Port.08	0.0.0.0	Port.09	0.0.0.0
Port.10	0.0.0.0				

Port and IP Bindings interface

TFTP - Update Firmware

Provides the ability to update the switch's firmware. Before updating, ensure you the TFTP server is ready and the firmware image is on the TFTP server.

1. **TFTP Server IP Address:** Enter the TFTP server IP.
2. **Firmware File Name:** Enter the name of firmware image.
3. Click .

TFTP - Update Firmware

Update Firmware		Restore Configuration		Backup Configuration	
TFTP Server IP Address	192.168.16.2	Firmware File Name	image.bin	Apply	Help

Update Firmware interface

TFTP – Restore Configuration

If the EEPROM image is stored on the TFTP server, you can restore it to flash memory.

1. **TFTP Server IP Address:** Enter the TFTP server IP.
2. **Restore File Name:** Enter the restore file name.
3. Click .

TFTP - Restore Configuration

Syslog Configuration interface

System Event Log - SMTP Configuration

Set up the mail server IP, mail account, account password, and email account for receiving event alerts.

1. **Email Alert:** enable or disable the email alert function.
2. **SMTP Server IP:** set up the mail server IP address.
3. **Sender:** Enter the email address, e.g. switch102@123.com, to identify where the event log came from.
4. **Authentication:** Mark the check box to enable and configure the email account and password for authentication.
5. **Mail Account:** set up the email account, e.g. [johnadmin](#) for the switch. It must be an existing email account on the mail server.
6. **Password:** The email account password.
7. **Confirm Password:** reconfirm the password.
8. **Rcpt e-mail Address 1 through 6:** Enter up to six email addresses to receive the event log.
9. Click .

Digital Input/Output

The EIR610-3SFP-T Managed Industrial Switch contains two digital outputs and two digital inputs. Outputs are open-collector transistor switches that may be controlled by the host computer. They provide messages, which can be applied to heaters, pumps, and other electrical equipment. The digital inputs may be read by the host computer and used to sense the state of a remote digital signal.

- The **Digital Input/Output** function must software enabled to be available. This is accomplished via a pull down box on the web interface.
- **Digital Input:** Choose the transition type to trigger it.
 - **Low→High:** DI0/DI1 will report the status when the external device's voltage changes from low to high.
 - **High→Low:** DI0/DI1 will report the status when the external device's voltage changes from high to low.
- **Event description:** User defined description for the event.
- **Action:** Check boxes to reoirt the events via Syslog, SMTP, or SNMP Trap.

Port Statistics

Provides port status.

- **Port:** The port number.
- **Type:** Displays the connection speed.
- **Link:** Displays link status —‘Up’ or ‘Down’.
- **State:** Enabled or Disabled.
- **Tx Good Packet:** Displays the number of good packets transmitted.
- **Tx Bad Packet:** Displays the number of bad packets transmitted.
- **Rx Good Packet:** Displays the number of good packets received.
- **Rx Bad Packet:** Displays the number of bad packets received.
- **Tx Abort Packet:** Displays the number of aborted transmit packets.
- **Packet Collision:** Displays the number of packet collisions.
- **Packet Dropped:** Displays the number of dropped packets.
- **Rx Bcast Packet:** Displays the number of broadcast packets.
- **Rx Mcast Packet:** Displays the number of multicast packets.
- Click to reset the numbers.

Port Control interface

Port Trunk

The Link Aggregation Control Protocol (LACP) provides a standardized method for exchanging information between Partner Systems on a link. This allows their Link Aggregation Control instances to reach an agreement on the identity of the Link Aggregation Group, move the link to that Link Aggregation Group, and enable its transmission and reception functions in an orderly manner. Link aggregation lets you group up to four consecutive ports into two dedicated connections. This feature expands bandwidth to a device on the network. **LACP operation requires full-duplex mode.**

Aggregator setting

1. **System Priority:** a value used to identify the active LACP. The switch with the lowest value has the highest priority. It is selected as the active LACP.
2. **Group ID:** There are three trunk groups available to configure. Choose the '**Group ID**' and click .
3. **LACP:** If enabled, the group is an LACP static trunk group. If disabled, the group is local static trunk group. All ports support LACP dynamic trunk. If connected to a device that also supports LACP, the LACP dynamic trunk group is automatically created.
4. **Work ports:** A maximum of four ports can be aggregated at the same time. With LACP static trunk group, any excess ports are considered standby and can be aggregated if a work port fails. If it is local static trunk group, the number of ports must be the same as the group member ports.
5. Select the ports add to the trunk group. Click  button to add the port. To remove unwanted ports, select the port and click  button.
6. When LACP is enabled, you can configure LACP Active/Passive status for each port on the State Activity page.
7. Click .

8. Use  button to delete Trunk Group.

Port Trunk - Aggregator Setting

The screenshot shows the 'Port Trunk—Aggregator Setting' interface. At the top, there are three tabs: 'Aggregator Setting' (selected), 'Aggregator Information', and 'State Activity'. Below the tabs is a 'System Priority' section with a text input field containing '1'. The main area contains a table with columns for 'Group ID', 'Lacp', and 'Work Ports'. The 'Group ID' row has a dropdown set to 'Trunk.1' and a 'Select' button. The 'Lacp' row has a dropdown set to 'Disable'. The 'Work Ports' row has a text input field containing '0'. To the right of the table is a vertical list of ports: Port.01, Port.02, Port.03, Port.04, Port.05, Port.06, Port.07, Port.08, and Port.09. Below the table are three buttons: 'Apply', 'Delete', and 'Help'.

Port Trunk—Aggregator Setting interface

Aggregator Information

Displays static trunk group information.

Port Trunk - Aggregator Information

The screenshot shows the 'Port Trunk – Aggregator Information' interface. At the top, there are three tabs: 'Aggregator Setting' (selected), 'Aggregator Information' (selected), and 'State Activity'. Below the tabs is a table titled 'Static Trunking Group' with two rows: 'Group Key' (value '1') and 'Port Member' (value '7 8').

Port Trunk – Aggregator Information interface

State Activity

After setting up the LACP aggregator, port state activity can be configured.

Mark the port and click **Apply**. The port state activity will change to **Active** or **Passive** depending on its previous state.

- **Active:** The port automatically sends LACP protocol packets.
- **Passive:** The port responds only if it receives LACP protocol packets from the opposite device.

- Note**
1. *A link having either two active LACP ports or one active port can perform dynamic LACP trunk.*
 2. *A link, which has two passive LACP ports, will not perform dynamic LACP trunk because both ports are waiting for an LACP protocol packet from the opposite device.*

Port Trunk - State Activity

Aggregator Setting		Aggregator Information		State Activity	
Port	LACP State Activity	Port	LACP State Activity	Port	LACP State Activity
1	<input checked="" type="checkbox"/> Active	2	N/A	3	N/A
3	N/A	4	N/A	5	N/A
5	N/A	6	N/A	7	N/A
7	N/A	8	N/A	9	N/A
9	N/A	10	N/A		

Apply **Help**

Port Trunk – State Activity interface

Port Mirroring

Port mirroring is a method to monitor traffic in switched networks. Traffic flowing through the indicated ports can be monitored by a specified port.

- **Destination Port:** Only one port can be selected as the destination (mirror) port for monitoring both RX and TX traffic from the source port. Two ports may be configured to monitor RX and TX traffic separately. A LAN analyzer can be connected to the mirror port.
- **Source Port:** Select the ports to monitor. All monitored port traffic will be sent to the mirror (destination) port. Multiple source ports by can be selected by checking the **RX** or **TX** check boxes.
- Click 

Port Mirroring

	Destination Port		Source Port	
	RX	TX	RX	TX
Port.01	<input checked="" type="radio"/>	<input checked="" type="radio"/>	<input type="checkbox"/>	<input type="checkbox"/>
Port.02	<input type="radio"/>	<input type="radio"/>	<input type="checkbox"/>	<input type="checkbox"/>
Port.03	<input type="radio"/>	<input type="radio"/>	<input type="checkbox"/>	<input type="checkbox"/>
Port.04	<input type="radio"/>	<input type="radio"/>	<input type="checkbox"/>	<input type="checkbox"/>
Port.05	<input type="radio"/>	<input type="radio"/>	<input type="checkbox"/>	<input type="checkbox"/>
Port.06	<input type="radio"/>	<input type="radio"/>	<input type="checkbox"/>	<input type="checkbox"/>
Port.07	<input type="radio"/>	<input type="radio"/>	<input type="checkbox"/>	<input type="checkbox"/>

Port Trunk – Port Mirroring interface

Rate Limiting

Set up each port's bandwidth rate and frame limitation type.

- **Ingress Limit Frame type:** Select the frame type to filter. There are four options: All, Broadcast/Multicast/Flooded Unicast, Broadcast/Multicast and Broadcast only.
- **Egress Limit:** The egress rate limit is ALL.

Rate Limiting

	Ingress Limit Frame Type	Ingress	Egress
Port.01	All	0 kbps	0 kbps
Port.02	All	0 kbps	0 kbps
Port.03	All	0 kbps	0 kbps
Port.04	All	0 kbps	0 kbps
Port.05	All	0 kbps	0 kbps
Port.06	All	0 kbps	0 kbps
Port.07	All	0 kbps	0 kbps
Port.08	All	0 kbps	0 kbps
Port.09	All	0 kbps	0 kbps
Port.10	All	0 kbps	0 kbps

Rate Range is from 100 kbps to 102400 kbps or to 256000 kbps for giga ports, and zero means no limit.

Rate Limiting interface

- All the ports support port ingress and egress rate control. For example, assume port 1 is 10Mbps, users can set its effective egress rate to 1Mbps, and ingress rate is 500Kbps. The switch performs the ingress rate limiting using a packet counter to meet the specified rate
 - **Ingress:** Enter the port effective ingress rate(The default value is '0')
 - **Egress:** Enter the port effective egress rate(The default value is '0')
- Click

VLAN configuration

A Virtual LAN (VLAN) can be thought of as a broadcast domain that exists within a switch or a defined set of switches. By grouping switch ports into VLANs, traffic flooding is limited since devices can only communicate directly with devices belonging to the VLAN. Creating a VLAN from a switch is the logical equivalent of reconnecting a group of devices to another Layer 2 switch. However, the network devices retain their same physical connection. The switch supports port-based and 802.1Q (tagged-based) VLAN. In the default configuration, the VLAN option is disabled.

VLAN NOT ENABLE

VLAN Configuration interface

VLAN configuration - Port-based VLAN

With port-based VLAN, the port is assigned to a VLAN. Therefore, all devices attached to a given port should be members of the same VLAN. As with other VLAN configurations, the packets forwarded using this method do not leak into other VLAN domains on the network. After the port has been assigned to a VLAN, devices on the port cannot send to or receive from devices in other VLANs without the intervention of another layer 3 device or the ability to tag the data packet with a specific PVID.

- Use button to modify an existing VLAN group.

Note *If the configuration is not saved, it will be lost when the switch is powered off.*

802.1Q VLAN

Tagged-based VLAN is an IEEE 802.1Q specification, which allows VLANs to be created across devices from different vendors. IEEE 802.1Q VLAN uses a technique to insert a “tag” into the Ethernet frame. The tag contains a VLAN Identifier (VID).

When the 802.1Q VLAN is enabled, all ports on the switch belong to a default VLAN (VID 1). The default VLAN cannot be deleted. Up to 64 VLAN groups are supported.

Rapid Spanning Tree

The Rapid Spanning Tree Protocol (RSTP) is an evolution of Spanning Tree Protocol (STP). It provides a faster spanning tree convergence after a topology change. The switch will auto detect a device that is running STP or RSTP protocol.

RSTP - System Configuration

- RSTP state can be modified. After modification, click .
- **RSTP mode:** Enable or disable the RSTP.
- **Priority (0-61440):** a value used to identify the root bridge. The bridge with the lowest value has the highest priority and is selected as the root. If the value changes, the switch must be rebooted. The value must be multiple of 4096.
- **Max Age (6-40):** The number of seconds a bridge waits without receiving Spanning-tree Protocol configuration messages before attempting a reconfiguration. Enter a value between 6 through 40

- **Hello Time (1-10):** The time that controls when the switch sends out the BPDU packet to check RSTP status. Enter a value between 1 and 10.
- **Forward Delay Time (4-30):** the number of seconds a port waits before changing from its Rapid Spanning Tree Protocol learning and listening state to the forwarding state. Enter a value between 4 and 30.

Note *Follow this rule to configure the MAX Age, Hello Time, and Forward Delay Time.*

$2 \times (\text{Forward Delay Time value} - 1) \geq \text{Max Age value} \geq 2 \times (\text{Hello Time value} + 1)$

RSTP - System Configuration

RSTP System Configuration interface

RSTP - Port Configuration

Configure path cost and priority of each port.

1. Select the port in Port column.
1. **Path Cost:** The cost of the path to the other bridge from this transmitting bridge at the specified port. Enter a number 1 through 200000000.
2. **Priority:** Network priority. Enter a number between 0 and 240. The value must be a multiple of 16.
3. **P2P:** Some of the rapid state transactions that are possible within RSTP are dependent upon whether the port concerned can only be connected to exactly one other bridge (i.e. it is served by a point-to-point LAN segment), or can be connected to two or more bridges (i.e. it is served by a shared medium LAN segment). This function allows the P2P status of the link to be manipulated administratively. True is P2P enabled. False is P2P disabled.
4. **Edge:** The port directly connected to the end stations cannot create a bridging loop in the network. To configure the port as an edge port, set the port to '**True**' status.
5. **Non STP:** Set **True** to disable STP mathematic calculation. Set **False** to including the STP mathematic calculation.
6. Click .

RSTP - Port Configuration

SNMP Configuration

Simple Network Management Protocol (SNMP) is the protocol developed to manage nodes (servers, workstations, routers, switches, hubs, etc.) on an IP network. SNMP enables network administrators to manage network performance, find and solve network problems, and plan for network growth. Network management systems learn of problems by receiving traps or change notices from network devices implementing SNMP.

System Configuration

■ Community Strings

Define and remove community strings.

1. **String:** Enter the name of the string.
2. **RO:** Read only. Enables requests accompanied by this string to display MIB-object information.
3. **RW:** Read write. Enables requests accompanied by this string to display MIB-object information and to set MIB objects.

1. Click .

- To remove the community string, select the community string and click **Remove**. The default community string cannot be edited.

- Agent Mode:** Select the SNMP version that you want to use and click **Change**

SNMP - System Configuration

The screenshot shows the 'System Configuration' tab selected in the top navigation bar. Below it, two main sections are displayed: 'Community Strings' and 'Agent Mode'.

Community Strings: This section contains a table with two columns. The left column, 'Current Strings:', lists 'public_RO' and 'private_RW'. The right column, 'New Community String:', has fields for 'String:' (containing 'public') and 'RO' or 'RW' access levels. A 'Remove' button is located above the current strings table, and an 'Add' button is located above the new string table.

Agent Mode: This section shows the current mode as 'SNMP v1/v2c only' in red text. It includes three radio button options: 'SNMP V1/V2C only', 'SNMP V3 only', and 'SNMP V1/V2C/V3'. A 'Change' button is located at the bottom of this section.

SNMP System Configuration interface

Trap Configuration

A trap manager is a management station that receives traps (the system alerts generated by the switch). If the trap manager is not defined, traps will not be issued. Create a trap manager by entering the IP address of the station and a community string.

- IP Address:** Enter the IP address of the trap manager.
- Community:** Enter the community string.
- Trap Version:** Select the SNMP trap version type (v1 or v2c).
- Click **Add**.
- To remove the community string, select the community string and click **Remove**. You cannot edit the name of the default community string.

Note:

Any modification of SNMPv3 tables might cause MIB accessing rejection. Please take notice of the causality between the tables before you modify these tables.

SNMP V3 configuration interface

Group Table

Configure SNMP v3 group table.

- **Security Name (User ID):** Assign the user name that was set up in the user table.
- **Group Name:** Enter the group name.
- Click  **Add**
- Click  **Remove** to remove an unwanted context name.

Access Table

Configure SNMP v3 access table.

- **Context Prefix:** Enter the context name.
- **Group Name:** Enter the group.
- **Security Level:** Enter the access level.
- **Context Match Rule:** Select the context match rule.
- **Read View Name:** Set up the read view.
- **Write View Name:** Set up the write view.
- **Notify View Name:** Set up the notify view.
- Click  **Add**
- Click  **Remove** to remove an unwanted context name.

MIBview Table

Configure MIB view table.

- **ViewName:** Set up the name.
- **Sub-Oid Tree:** Fill the Sub OID.
- **Type:** Select the type – exclude or included.
- Click  **Add**
- Click  **Remove** to remove an unwanted context name.

QoS Configuration

QoS Policy and Priority Type

- **QoS Policy:** select the QoS policy rule.
 - **Use an 8,4,2,1 weighted fair queuing scheme:** The switch will follow 8:4:2:1 rate to process the priority queue from the highest to the lowest queue. For example, when processing, 1 frame of the lowest queue, 2 frames of the low queue, 4 frames of the middle queue, and 8 frames of the high queue will be processed at the same time.
 - **Use the strict priority scheme:** The highest queue will always be processed first.
- **Priority Type:** there are five priority selections available.
- **Port-base:** the port priority will follow the assigned **Port-base** – High, middle, low, or lowest.
 - **COS Only:** the port priority will only follow the **COS priority** assigned.
 - **TOS only:** the port priority will only follow the **TOS priority** assigned.
 - **COS first:** the port priority will follow the COS priority first, and then the other priority rule.
 - **TOS first:** the port priority will follow the TOS priority first, and then the other priority rule.
- Click .

	Lowest <input type="button"/>							

QoS Configuration interface

Port Base Priority

- **Port:** Each port has four priority levels – High, Middle, Low, and Lowest.
- Click .

COS Configuration

Set up the COS priority level.

- **COS priority:** Set up the COS priority level 0 to 7 –High, Middle, Low, Lowest.

- Click .

TOS Configuration

- **TOS priority:** the system provides 0 to 63 TOS priority levels. Each level has four types of priority – high, middle, low, and lowest. The default value is ‘Lowest’. When an IP packet is received, the system will check the TOS level value in the IP packet. For example, if the TOS level 25 is high and the port is following the TOS priority policy only, when a packet is received, the system will check the TOS value of the received IP packet. If the TOS value of received IP packet is 25(priority = high), then the packet will have highest priority.

- Click .

IGMP Configuration

The Internet Group Management Protocol (IGMP) is an internal protocol of the Internet Protocol (IP) suite. IP manages multicast traffic by using switches, routers, and hosts that support IGMP. Enabling IGMP allows the ports to detect IGMP queries and report packets and manage IP multicast traffic through the switch. IGMP has three fundamental types of message.

Message	Description
Query	A message sent from the querier (IGMP router or switch) asking for a response from each host belonging to the multicast group.
Report	A message sent by a host to the querier to indicate that the host wants to be or is a member of a given group indicated in the report message.
Leave Group	A message sent by a host to the querier to indicate that the host has quit being a member of a specific multicast group.

Enable IGMP protocol on the web management switch setting advanced page. IP multicast addresses range from 224.0.0.0 through 239.255.255.255.

- **IGMP Protocol:** Enable or disable the IGMP protocol.
- **IGMP Query:** Select the IGMP query function (Enable or Auto) to set the switch as a querier for an IGMP version 2 multicast network.
- Click **Apply**.

IGMP Configuration

IP Address _____	VLAN ID _____	Member Port _____

<input type="button" value="Apply"/> <input type="button" value="Help"/>		

IGMP Configuration interface

X-Ring

X-Ring provides network redundancy similar to the Spanning Tree and Rapid Spanning Tree Protocols. However, recovery time is greatly reduced when the X-Ring protocol is used. The protocol identifies one switch as the Ring Master. Packets are blocked from the redundant path unless a ring member becomes disconnected from the rest of the network. When this happens, the protocol automatically restores connectivity using the redundant path.

In the X-Ring topology, every switch should enable X-Ring function and assign two member ports to the ring. Only one switch in the X-Ring group would be set as the backup switch. Other switches are called working switches and their two member ports are called working ports. If a network connection failure occurs, the backup port will automatically become a working port to recover.

The switch can be set in the ring master or slave mode. The ring master negotiates and places commands to the other switches in the X-Ring group. If there are two or more switches in the master mode, the software will select the switch with lowest MAC address number as the ring master. The X-Ring master mode is enabled using the X-Ring configuration interface. The Ring Master can also be identified using the R.M. LED on the front of the switch.

The switch also supports coupling ring to connect two or more X-Ring groups for redundant backup. The dual homing function is used to prevent a connection lose between the X-Ring group and the upper level/core switch.

- **Enable X-Ring:** Mark the check box to enable the X-Ring function.
- **Enable Ring Master:** Mark the check box to set the switch as the Ring Master.
- **1st & 2nd Ring Ports:** Assign two ports as the member ports. **1st Ring Port** is the working port and **2nd Ring Port** is the backup port. When **1st**

Ring Port fails, the system will automatically upgrade the **2nd Ring Port** to be the working port.

- **Enable Coupling Ring:** Mark the check box to enable the coupling ring function.
- **Coupling port:** Assign the member port.
- **Control port:** Set the switch as the master switch in the coupling ring.
- **Enable Dual Homing:** Set up one of port on the switch to be the Dual Homing port. In an X-Ring group, only one port can be the Dual Homing port. Dual Homing only works when the X-Ring function is enabled.
- Click

X-Ring Configuration

<input type="checkbox"/> Enable Ring				
<input type="checkbox"/> Enable Ring Master				
1st Ring Port	Port.01			
2nd Ring Port	Port.02			
<input type="checkbox"/> Enable Couple Ring

<input type="button" value="Apply"/> <input type="button" value="Help"/>				

X-ring Interface

Note

1. When X-Ring function is enabled, disable the RSTP function. X-Ring and RSTP cannot exist at the same time.
2. If the configuration is not saved, it will be lost when the switch is powered off.

Security

In this section, you can configure 802.1x and MAC address table.

802.1X/Radius Configuration

802.1x is an IEEE authentication specification that allows a client to connect to a wireless access point or wired switch but prevents the client from gaining access to the Internet until it proves authority by providing a user name and password, which is verified by a separate server.

System Configuration

1. **IEEE 802.1x Protocol:** Enable or disable 802.1x protocol.
2. **Radius Server IP:** Enter the Radius Server IP address.
3. **Server Port:** Enter the UDP destination port for authentication requests to the Radius Server.
4. **Accounting Port:** Enter the UDP destination port for accounting requests to the Radius Server.
5. **Shared Key:** Enter an encryption key for use during authentication sessions. This key must match the encryption key used on the Radius Server.
6. **NAS, Identifier:** Enter the identifier of the radius client.
7. Click .

802.1x/Radius - System Configuration

System Configuration		Port Configuration	Misc Configuration

MAC Address Table

Uses the MAC address table to ensure the port security.

Static MAC Address

You can add a static MAC address. This address remains in the switch's address table, regardless of whether the device is physically connected to the switch. Therefore, the switch does not have to re-learn a device's MAC address when the disconnected or powered-off device reconnects to the network. You can add / modify / delete a static MAC address.

■ Add the Static MAC Address

1. **MAC Address:** Enter the MAC address of the port that should permanently forward traffic, regardless of the device network activity.
2. **Port No.:** pull down the port number.
3. Click **Add**.
4. If you want to delete the MAC address from the filtering table, select the

MAC address and click .

Trouble shooting

- Verify that 12 to 48VDC power is available. Do not exceed 48VDC.
- Select the proper cable to construct your network. Use unshielded twisted-pair (UTP) or shield twisted-pair (STP) cable for RJ-45 connections:
100Ω Category 3, 4, or 5 cable for 10Mbps connections, 100Ω Category 5 cable for 100Mbps, or 100Ω Category 5e/above cable for 1000Mbps connections. Ensure that the length of any twisted-pair connection does not exceed 100 meters (328 feet).
- **LED Indicators:** The LEDs can be used to diagnose system problems.
