

FEATURES

- TI AM3359 Application Processor
 - Up to 720MHz ARM Cortex A8 MPU
 - NEON SIMD Coprocessor
 - 32 KB L1 Program Cache
 - 32 KB L1 Data Cache
 - 256 KB L2 Cache
 - 64 KB RAM
 - 176 KB boot ROM
 - JTAG Emulation/Debug
- 256 MB DDR2 CPU RAM
- 256 MB Parallel NAND FLASH
- 8 MB Serial NOR FLASH
- 2 Programmable Real-time Units (PRUs)
- Integrated Power Management
- Standard DDR3 SO-DIMM-204 Interface
 - 2 10/100/1000 Mbps EMACs
 - 24-bit WXGA LCD Interface
 - Touch Screen Controller
 - 8 Channel, 12-bit SAR ADC
 - 2 CAN Interfaces
 - 6 UARTs
 - 2 USB Ports
 - 2 4-Channel McASPs
 - 3 MMC/SD/SDIO
 - 2 SPI, 3 I2C, GPIO
 - eHRPWM, eQEP
 - Single 3.3V to 5.0V Input Power Supply
- SGX530 3D Graphics Accelerator
- Watchdog Timer
- Real-time clock
- Power Reset and Clock Management (PRCM)
- Crypto Hardware Accelerators (AES, SHA, PKA, RNG)
- Environmental Testing
 - MIL-STD-810F

APPLICATIONS

- Embedded Instrumentation
- Industrial Automation
- Industrial Instrumentation
- Medical Instrumentation
- Weighing Scales
- Closed Loop Motor Control

BENEFITS

- Rapid Development / Deployment
- Multiple Connectivity and Interface Options
- Rich User Interfaces
- High System Integration
- High Level OS Support
 - Linux Kernel
 - QNX
 - Windows CE Ready

DESCRIPTION

The MityARM-3359 is a highly configurable, small form-factor processor card that features a Texas Instruments Sitara AM3359 Processor. The module includes NAND FLASH and DDR2 RAM memory subsystems. The MityARM-3359 provides a complete and flexible CPU infrastructure for highly integrated embedded systems.

The onboard AM3359 processor provides Cortex-A8 32-bit RISC processor with a NEON SIMD coprocessor. This MPU is capable of running a rich set of real-time operating systems containing software applications programming interfaces (APIs) expected by modern system designers. The ARM architecture supports several operating systems, including Linux, QNX, and Windows CE.

In addition to the Cortex-A8, the AM3359 also includes dual Programmable Real-Time Units (PRUs). These PRUs are 200MHz RISC processors that run independently of the main Cortex-A8 CPU and have access to all the on-chip peripherals as well as all external memory. These can be used for any purpose; typical applications include the implementation of custom, industrial serial or Ethernet protocols such as PROFIBUS or EtherCAT. In addition, the PRUs can continue to run while the core CPU is in sleep mode in order to monitor for system wakeup events.

Figure 1 MityARM-3359 Block Diagram

Figure 1 provides a top level block diagram of the MityARM-3359 processor card. As shown in the figure, the primary interface to the MityARM-3359 is through a standard DDR3 SO-DIMM-204 card edge interface. The interface provides power, synchronous serial connectivity, and many other interfaces provided by the Sitara processor. Details of the SO-DIMM-204 connector interface are included in the SO-DIMM-204 Interface Description, below.

MityARM-3359 Onboard Storage

DDR2 Memory

The AM3359 includes one dedicated 16 bit DDR2 SDRAM memory interface. The MityARM-3359 includes 256 MB of DDR2 RAM integrated on board the module. The memory bus interface is capable of burst transfer rates of 800 MB / second.

NAND FLASH

256 MB of on-board NAND FLASH memory is connected to the AM3359 using the general purpose memory controller (GPMC) bus. The FLASH memory is 8 bits wide and is connected to the first chip select line of the GPMC (CE0). The FLASH memory is typically used to store the following types of data:

- Bootloaders
- ARM linux / windows XP / QNX embedded root file-system
- runtime ARM software
- runtime application data (non-volatile storage)

The GPMC bus is also accessible on the SO-DIMM-204 connector. It can be used to access external memories such as SDRAM, SRAM, NOR flash, NAND flash, or memory-mapped ASICs and FPGAs. The interface is a maximum of 16-bits wide, but can also be used for 8-bit access.

NOR FLASH

8 MB of on-board NOR FLASH memory is connected to the AM3359 using a Serial Peripheral Interface (SPI). The AM3359 provides up to 2 SPI interfaces with both interfaces available on the SO-DIMM connector.

Configuration EEPROM

The MityARM-3359 contains a 256 x 8-bit EEPROM that is used to hold configuration data for the module. The EEPROM is connected to the AM3359 using one of the three I2C interfaces available on AM3359.

External Interfaces

The AM3359 makes extensive use of functional pin multiplexing to provide a highly configurable device that can be tailored to a multitude of applications. A list of the interfaces/functions that are available to the user is provided below.

- 2 Universal Serial Bus (USB) 2.0 High-Speed On the Go ports
- 2 Controller-Area Network (CAN) ports
- 2 Multichannel Audio Serial Ports (McASP)
- 2 Industrial Gigabit Ethernet MAC's (10/100/1000 Mbps)
- 3 MMC/SD/SDIO ports
- 8 input, 12 bit A/D Converter
- LCD Controller
- 3 Enhanced Capture (eCAP) Modules
- 3 Enhanced High-Resolution PWM (eHRPWN) modules
- 3 32-bit Enhanced Quadrature Pulse Encoder (eQPE) modules
- 4 Timers
- 2 Serial Peripheral (SPI) ports
 - SPI Port 1 is also connected to the on-board NOR FLASH memory
- 6 Universal Asynchronous Receive/Transmit (UART) ports
- 2 Inter-Integrated Circuit (I2C) ports
 - I2C Port 1 is also connected to the on-board EEPROM and PMIC
- General Purpose Memory Controller (GPMC) interface
 - A subset of this interface is also connected to the on-board NAND FLASH
- JTAG/Debugger port

Additionally, most of the pin multiplexed signals can be configured as general purpose I/O signals with interrupt capability.

Software and Application Development Support

Users of the AM3359 are encouraged to develop applications using the MityARM-3359 software development kit provided by Critical Link LLC. The SDK is an expansion of the TI platform support package for the AM3359 and includes an implementation of an OpenEmbedded board support package providing an Angstrom based Linux root filesystem/distribution and compatible gcc compiler tool-chain with debugger.

Growth Options

The AM3359 has been designed to support several upgrade options. These options include various speed grades, memory configurations, and operating temperature specifications including commercial and industrial temperature ranges. The available options are listed in the section below containing ordering information. For additional ordering information and details regarding these options, or to inquire about a particular configuration not listed below, please contact a Critical Link sales representative.

ABSOLUTE MAXIMUM RATINGS

If Military/Aerospace specified cards are required, please contact the Critical Link Sales Office or unit Distributors for availability and specifications.

Maximum Supply Voltage, Vcc 5.2 V

Storage Temperature Range -65 to 80C

Environmental Testing	MIL-STD-810F
Commercial	0°C to 70°C
Temperature Range	
Industrial Temperature Range	-40°C to 85°C
Humidity	0 to 95%
	Non-condensing

OPERATING CONDITIONS

SO-DIMM-204 Interface Description

The primary interface connector for the MityARM-3359 is the SO-DIMM card edge interface which contains 4 classes of signals:

- Power (PWR)
- Dedicated signals mapped to the on-board Power Management device (PM)
- Dedicated signals mapped to the AM3359ZCZ device (335D)
- Multi-function signals mapped to the AM3359ZCZ device (335M)

Table 1 contains a summary of the MityARM-3359 pin mapping.

ELECTRICAL CHARACTERISTICS

Table 2: Electrical Characteristics

Symbol	Parameter	Conditions	Min	Typ	Max	Units
VIN	Voltage supply, volt input.		3.2	3.3	5.2	Volts
I33	Quiescent Current draw,	3.3 volt input		230	TBS	mA
I33-max	Max current draw,	3.3 volt input.		TBS	TBS	mA
FCPU	CPU internal clock Frequency (PLL output)		25	720	720	MHz
FEMIF	GPMC bus frequency		-	-	-	MHz
	1.	Power utilization of the MityARM-3359 is heavily dependent on end-user application. Major factors include: ARM CPU PLL configuration, CPU Utilization, and external DDR2 RAM utilization.				

ORDERING INFORMATION

The following table lists the orderable module configurations. For shipping status, availability, and lead time of these or other configurations please contact your Critical Link representative.

Table 3: Orderable Model Numbers

Model	ARM Speed	NAND Flash	RAM	Operating Temp
3359-EX-227-RC-X	720 MHz	256MB	256MB	0°C to 70°C
3359-GX-226-RC	720 MHz	256MB	256MB	0°C to 70°C
3359-EX-226-RI	600 MHz	256MB	256MB	-40°C to 85°C

Note: 3359-EX-227-RC-X model is manufactured with pre-production silicon from Texas Instruments and will be the first module to be available.

MECHANICAL INTERFACE

A mechanical outline of the MityARM-3359 is illustrated in Figure 2, below.

Figure 2 MityARM-3359 Mechanical Outline

REVISION HISTORY

Date	Change Description
1-NOV-2011	Draft Spec.
16-NOV-2011	Pre-release updates.
3-DEC-2011	Add mechanical outline.
7-DEC-2011	Supplemented pin descriptions. Added External interfaces. Added on board storage description New block diagram showing third I2C interface
13-DEC-2011	Corrected pin list (pins 30,32,34,52)
8-FEB-2012	Update photo, remove 3359-EX-227-RC from orderable parts list.
20-MAR-2012	Remove preliminary markings and update input voltage level.
10-JUL-2012	Part number correction and add MIL-STD-810F.
