

High Speed LDO Regulators, Low ESR Cap. Compatible, ON/OFF Switch

■ GENERAL DESCRIPTION

The XC6219/XC6211 series are highly accurate, low noise, CMOS LDO Voltage Regulators. Offering low output noise, high ripple rejection ratio, low dropout and very fast turn-on times, the XC6219/6211 series is ideal for today's cutting edge mobile phone.

Internally the XC6219/6211 includes a reference voltage source, error amplifiers, driver transistors, current limiters and phase compensators. The XC6219/6211's current limiters' foldback circuit also operates as a short protect for the output current limiter and the output pin. The output voltage is set by laser trimming. Voltages are selectable in 50mV steps within a range of 0.9V to 5.0V. The XC6219/6211 series is also fully compatible with low ESR ceramic capacitors, reducing cost and improving output stability. This high level of output stability is maintained even during frequent load fluctuations, due to the excellent transient response performance and high PSRR achieved across a broad range of frequencies.

The CE function allows the output of regulator to be turned off, resulting in greatly reduced power consumption.

■ APPLICATIONS

- Mobile phones
- Cordless phones, radio communication equipment
- Portable games
- Cameras, Video cameras
- Reference voltage sources
- Battery powered equipment

■ FEATURES

- Maximum Output Current** : 150mA ($V_{OUT} < 1.75V$, A~D type)
: 240mA ($V_{OUT} \geq 1.8V$, A~D type)
: 300mA ($V_{OUT} \geq 1.3V$, E~H type)
- Dropout Voltage** : 200mV @ 100mA
- Operating Voltage Range** : 2.0V ~ 6.0V
- Output Voltage Range** : 0.9V ~ 5.0V (0.05V steps)
- Highly Accuracy** : $\pm 2\%$ ($V_{OUT} > 1.5V$)
: $\pm 30mV$ ($V_{OUT} \leq 1.5V$)
: $\pm 1\%$ ($V_{OUT} \geq 3.0V$)
- Low Power Consumption** : 25 μA (TYP.)
- Standby Current** : Less than 0.1 μA (TYP.)
- High Ripple Rejection** : 65dB @ 10kHz
- Operating Temperature Range** : -40°C ~ 85°C
- Low ESR Capacitor** : Ceramic capacitor compatible
- Ultra Small Packages** : SOT-25
: SOT-89-5 (for XC6219 only)
: USP-6B (for XC6219 only)
- Environmentally Friendly** : EU RoHS Compliant, Pb Free

■ PRODUCT CLASSIFICATION

● Selection Guide

The following options for the CE pin logic and internal pull-up/down are available:

High Active + no pull-down resistor built-in (standard)

High Active + 2.0M Ω pull-down resistor built-in <between CE-Vss> (semi-custom)

Low Active + no pull-up resistor built-in (semi-custom)

Low Active + 2.0M Ω pull-up resistor built-in <between VIN-CE> (semi-custom)

Note: *With the pull-up resistor or pull-down resistor built-in types, the supply current during operation will increase by $V_{IN} / 2.0M\Omega$ (TYP.)

● Ordering Information

XC6219 ①②③④⑤⑥-⑦^(*) (Standard pin layout versions)

XC6211 ①②③④⑤⑥-⑦^(*) (Different pin layout version in SOT-25)

DESIGNATOR	DESCRIPTION	SYMBOL	DESCRIPTION
① (*)	CE Pin Logic	A / E	High Active, pull-down resistor built in (Semi-custom)
		B / F	High Active, no pull-down resistor built in (Standard)
		C / G	Low Active, pull-up resistor built in (Semi-custom)
		D / H	Low Active, no pull-up resistor built in (Semi-custom)
②③	Output Voltage	09~50	e.g. ②=3, ③=0, → 3.0V
④	Output Voltage Accuracy	1 / 2	0.1V increments, $\pm 2\%$ accuracy e.g. ③=2, ③=8, ④=2 → 2.80V, $\pm 2\%$
		1 (*)	0.1V increments, $\pm 1\%$ accuracy e.g. ②=3, ③=0, ④=1 → 3.00V, $\pm 1\%$
		A	0.05V increments, $\pm 2\%$ accuracy e.g. ②=2, ③=8, ④=A → 2.85V, $\pm 2\%$
		B (*)	0.05V increments, $\pm 1\%$ accuracy e.g. ②=3, ③=0, ④=B → 3.05V, $\pm 1\%$
⑤⑥-⑦	Packages Taping Type ^(*)	MR	SOT-25 (SOT-23-5)
		MR-G	SOT-25 (SOT-23-5)
		PR	SOT-89-5 (for XC6219 only)
		PR-G	SOT-89-5 (for XC6219 only)
		DR	USP-6B (for XC6219 only)
		DR-G	USP-6B (for XC6219 only)

NOTE :

*1 : Maximum output current of XC6219/6211 E to H series is 300mA.

*2 : Output voltage of the $\pm 1\%$ accuracy product is 3.0V or more.

^(*) The "-G" suffix indicates that the products are Halogen and Antimony free as well as being fully RoHS compliant.

^(*) The device orientation is fixed in its embossed tape pocket. For reverse orientation, please contact your local Torex sales office or representative. (Standard orientation: ⑤R-⑦, Reverse orientation: ⑤L-⑦)

Circuit ②

Circuit ③

Circuit ④

■ OPERATIONAL EXPLANATION

<Output Voltage Control>

The voltage divided by resistors R1 & R2 is compared with the internal reference voltage by the error amplifier. The P-channel MOSFET, which is connected to the V_{OUT} pin, is then driven by the subsequent output signal. The output voltage at the V_{OUT} pin is controlled and stabilized by a system of negative feedback. The current limit circuit and short protect circuit operate in relation to the level of output current. Further, the IC's internal circuitry can be shutdown via the CE pin's signal

<Low ESR Capacitors>

With the XC6219/6211 series, a stable output voltage is achievable even if used with low ESR capacitors as a phase compensation circuit is built-in. In order to ensure the effectiveness of the phase compensation, we suggest that an output capacitor (C_L) is connected as close as possible to the output pin (V_{OUT}) and the V_{SS} pin. Please use an output capacitor with a capacitance value of at least 1.0 μ F. Also, please connect an input capacitor (C_{IN}) of 1.0 μ F between the V_{IN} pin and the V_{SS} pin in order to ensure a stable power input.

Stable phase compensation may not be ensured if the capacitor runs out capacitance when depending on bias and temperature. In case the capacitor depends on the bias and temperature, please make sure the capacitor can ensure the actual capacitance.

<Current Limiter, Short-Circuit Protection>

The XC6219/6211 series includes a combination of a fixed current limiter circuit & a foldback circuit, which aid the operations of the current limiter and circuit protection. When the load current reaches the current limit level, the fixed current limiter circuit operates and output voltage drops. As a result of this drop in output voltage, the foldback circuit operates, output voltage drops further and output current decreases. When the output pin is shorted, a current of about 50mA flows.

<CE Pin>

The IC's internal circuitry can be shutdown via the signal from the CE pin with the XC6219/6211 series. In shutdown mode, output at the V_{OUT} pin will be pulled down to the V_{SS} level via R1 & R2. The operational logic of the IC's CE pin is selectable (please refer to the selection guide). Note that as the standard XC6219/6211B type's regulator 1 and 2 are both 'High Active/No Pull-Down', operations will become unstable with the CE pin open. Although the CE pin is equal to an inverter input with CMOS hysteresis, with either the pull-up or pull-down options, the CE pin input current will increase when the IC is in operation. We suggest that you use this IC with either a V_{IN} voltage or a V_{SS} voltage input at the CE pin. If this IC is used with the correct specifications for the CE pin, the operational logic is fixed and the IC will operate normally. However, supply current may increase as a result of through current in the IC's internal circuitry.

■ NOTES ON USE

1. Please use this IC within the stated absolute maximum ratings. The IC is liable to malfunction should the ratings be exceeded.
2. Where wiring impedance is high, operations may become unstable due to noise and/or phase lag depending on output current. Please keep the resistance low between V_{IN} and V_{SS} wiring in particular.
3. Please wire the input capacitor (C_{IN}) and the output capacitor (C_L) as close to the IC as possible.
