

Low-Cost, Power-On Reset and Watchdog Controllers

General Description

The MAX698/MAX699 monitor the +5V supply in micro-processor (μ P) and digital systems. They supply a $\overline{\text{RESET}}$ pulse of at least 140ms duration on power-up, power-down, and during low-voltage brownout conditions. Circuit reliability is increased at reduced cost by eliminating all external components and adjustments.

The MAX699 includes all features of the MAX698, but also provides a watchdog input to monitor microprocessor activity. The $\overline{\text{RESET}}$ output goes low if the watchdog input (WDI) is not toggled within 1 second. The watchdog feature can be disabled by leaving WDI open.

Both parts are supplied in 8-lead PDIP and 16-lead 0.3in wide small outline (SO) packages and are specified from 0°C to +70°C for C grade devices and -40°C to +85°C for E devices. The SO versions, with more pins than the 8-lead PDIP, have additional outputs not available in DIP packages. These are $\overline{\text{RESET}}$ (without inversion) and watchdog output (WDO).

Input Voltage (with respect to GND)
WDI, WDO, RESET, $\overline{\text{RESET}}$ -0.3V to V_{CC}
Operating Temperature Range
C Suffix.....0°C to +70°C
E Suffix.....-40°C to +85°C
Rate of Rise, V_{CC}100V/ μ s

Power Dissipation (T_A = +70°C)
8-Pin PDIP (derated 5mW/°C above +70°C).....400mW
16-Pin SO (derated 7mW/°C above +70°C)600mW
Storage Temperature Range-65°C to +150°C
Lead Temperature (soldering, 10s)+300°C

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Pin Description

PIN		NAME	FUNCTION
SO	PDIP		
1, 4, 9	3, 4, 8	GND	Chip Power Ground
2, 3	1, 2	V _{CC}	+5V Sense Input and MAX698/MAX699 Chip Power
5–8, 10–14	5, 6	N.C.	No Connection
11	6	WDI (MAX699 Only)	(MAX699 Only.) A three-level input. If WDI remains high or low for more than the watchdog timeout period, RESET pulses low (WDO also goes low on the MAX699 SO package). If WDI is unconnected, the watchdog circuit is disabled.
14	—	WDO (MAX699 Only)	(MAX699 Only.) Goes low when WDI remains high or low for more than the watchdog timeout period. WDO is set high at the next WDI transition. If WDI is unconnected or at midsupply, WDO remains high. WDO also remains high when V _{CC} falls below 4.4V.
15	7	RESET	Goes low when V _{CC} falls below internally set threshold (see the <i>Electrical Characteristics</i> table).
16	—	RESET	Goes high when V _{CC} falls below internally set threshold.
