AVR32919: AT32UC3C-EK User Guide

Features

- **Kit Features Overview**
- **Kit Content**
- **Hardware Description**
- **Schematic**

1 Introduction

The Atmel® AT32UC3C-EK is an evaluation kit and development system for the Atmel AVR® UC3 AT32UC3C0512C microcontroller.

As a development system, the board notably provides on-board memory, a USB communication interface, CAN and LIN network interfaces and the JTAG programming and debugging interface. The AT32UC3C-EK also features expansion headers; one of these is the wireless expansion header (named WLESS header on the PCB).

Figure 1-1. The Atmel AT32UC3C-EK Evaluation Kit
2 Abbreviations

ASF: AVR Software Framework

**CAN**: Controlled Area Network

LIN: Local Interconnect Network

HMI: Human Machine Interface

3 Kit Overview

This section lists the features provided by the Atmel AT32UC3C-EK kit and describes the content of the kit.

Figure 3-1. Atmel AT32UC3C-EK Block Diagram

3.1 Features

This section lists the main components and interfaces of the Atmel AT32UC3C-EK kit:

- Main MCU: 32-bit Atmel AVR UC3 AT32UC3C0512C (TQFP144)
    - o 512 Kbytes internal Flash, 256 Kbytes internal RAM
    - o Up to 66 MHz operations
    - o Controller Area Network Interfaces
    - o Peripheral Event System
    - o FlashVault™ allows pre-programmed Secure library support for end-user applications
    - o DSP Floating Point Instructions.
- Powered through USB connector or through external power supply (header *J1* or *J2*).
- 16 MHz oscillator for the main clock, 1x RTC 32 kHz crystal and 1x free footprint for additional oscillator.
- JTAG and NEXUS Connectors for programming and debugging on the Atmel AT32UC3C0512C MCU.
- 4x LEDs.
- 2x pushbuttons.
- 1x reset pushbutton.
- 1x QTouch® (Atmel AT42QT1060) with 6x buttons connected through the TWI.
- 1x QVGA LCD display with resistive touch screen.
- 1x jack connector to output audio samples.
- 1x microphone input to record audio signal.
- 2x CAN Interfaces and 2x LIN Interfaces.
- 1x serial DataFlash 64 Mbits.
- 1x serial EEPROM 128 bits.
- 1x SD/MMC slot connector.
- 1x SDRAM 256 Mbits.
- Wireless Header (WLESS) for the wireless expansion header or for any SPI-based or TWI-based or USART-based external communication.
- Atmel AVRMC300 expansion headers to be able to manage motor control applications.
- *J27*: USB (2.0 mini A-B receptacle) connected to the 32-bit Atmel AVR UC3 AT32UC3B1256
    - o AT32UC3C0512C and Atmel AT32UC3B1256 are connected through 2 pins.
    - o The pre-loaded firmware on the AT32UC3B1256 acts as a UART-USB CDC Virtual Com Port gateway.
    - o the *J28* jumper can be used to set the AT32UC3B1256 in bootloader mode at power-up.
    - o JTAG connector for programming & debugging the AT32UC3B1256.
- *J21*: USB (2.0 mini A-B receptacle) connected to the 32-bit AVR UC3 AT32UC3C0512C to demonstrate USB feature of the product.

3.2 Kit Content

The Atmel AT32UC3C-EK toolbox contains the following items:

- 1x Atmel AVR Technical Library DVD,
- 1x Atmel AT32UC3C-EK Customer letter,
- 1x Atmel AT32UC3C-EK Getting Started Guide,
- 1x Atmel AT32UC3C-EK evaluation kit,
- 2x mini-B plug to std-A plug ~1.5m USB cable,
- 5x 2-pins cable,
- 1x 10-pins flat cable.

Figure 3-2. Unpacked Atmel AT32UC3C-EK Toolbox

4 Hardware Description

This section presents the hardware blocks of the Atmel AT32UC3C-EK hardware design. Each hardware block is described with:

- an overview of the hardware block,
- a location in the schematics document,
- AT32UC3C-specific information (when relevant),
- all possible hardware configurations of the block and available test points.
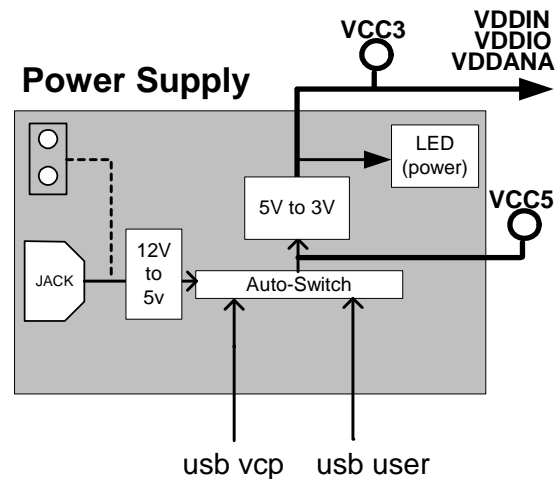

In each block description, the components reference and schematic can be found in The AT32UC3C-EK Schematics and Assembly bottom/ top view

4.1 Power Supply

The power supply block of the AT32UC3C-EK is in charge of distributing power to all components of the board.

4.1.1 Overview

Figure 4-1. AT32UC3C-EK Power Supply Logical View

The AT32UC3C-EK can be powered from 4 different sources: 2x USB mini AB plug (5V input): labeled "USB USER" (*J21*) and "USB VCP" (*J27*) and 2x external power supply *J1* jack connector or the *J2* 2-pins headers (DC 12V ±10%).

The AT32UC3C-EK will automatically switch to the more accurate power source if it senses voltage on it (external power supply is defined as the more accurate power source, then VBUS from "USB VCP" and the less accurate power source is VBUS from "USB USER").

These inputs go through an external 3.3V switch mode regulator which delivers supplies to the rest of the board with a 3.3V voltage.

The power indicator LED green *D3*, labeled "POWER", indicates if the 3.3V from the external regulator is present.

Refer to section 4.1.3.1 for a description of the possible hardware configurations of the Power Supply block.

**Figure 4-2.** Atmel AT32UC3C-EK Top View Power Supply Location

Figure 4-3. AT32UC3C-EK Bottom View Power Supply Location

4.1.2 UC3C-Specific Information

4.1.2.1 AT32UC3C0512C Power Supply Mode

Among the two power supply configurations supported by the Atmel AT32UC3C0512C, this board implements the **3.3V Single Supply Mode** configuration. Refer to the Figure "3.3V Single Supply mode" of the Power Considerations section in the AVR UC3 C0 Series datasheet for schematic diagram of this mode.

4.1.2.2 AT32UC3C0512C pinout for the Power Supply Block

Table 4-1. UC3C pinout for the Power Supply block

QFP144 pin	GPIO	GPIO alternate function	Feature
53	N.A.	N.A.	VDDIN5
54	N.A.	N.A.	VDDIN33
52	N.A.	N.A.	GNDPLL
55	N.A.	N.A.	VDDCORE
56	N.A	N.A	GNDCORE
37	N.A.	N.A.	GNDANA
34,35	N.A.	N.A.	ADCREFP/N
38	N.A.	N.A.	VDDANA
5,76,104,119	N.A.	N.A	GNDVDDIO
5,75,103,118	N.A.	N.A.	VDDIO

4.1.3 Configurations and Test Points

4.1.3.1 Hardware Configurations

The default hardware configuration of the Power Supply block implies that:

- The power supply source is one of the 2x USB plug –"USB USER" and "USB VCP"- or the jack header (ref. Figure 4-1 and Figure 3-1),
- The 2-pins header (J2) can also be used as a power supply source (not available by default).

Mount the 0 Ohm *R73* resistor (solder strap) and remove the 0 Ohm *R71* resistor, to enable the 2-pins header external entry (J2).

4.1.3.2 Test Points

A few test points covering the Power Supply block have been placed on the Atmel AT32UC3C-EK for the verification of important signals.

Table 4-2. Power Supply block Test Points

Designation	Feature
TP12-14	Input voltage level after *D1* when the *J1* external Power Supply is used
TP20-21	Input voltage level after *D2* when the *J2* external Power Supply is used
TP22-23	Input voltage for 3.3V regulator. 5V nominal
TP24-25	Input voltage for all board components. 3.3V nominal
TP28-31	Input voltage for all board components except Atmel AT32UC3C0512C and Atmel AT42QT1080. Should be 3.3V nominal
TP27-30	Input voltage for the AT32UC3C0512C VDDIO pin. Should be 3.3V nominal
TP26-29	Input voltage for the AT32UC3C0512C VDDIN pin. Should be 3.3V nominal
TP32-33	Input voltage for the AT32UC3C0512C VDDANA pin. Should be 3.3V nominal
TP13	GND

.

**4.1.4 Power Consumption Measurement**

To measure the power consumption of the overall board not including the AT32UC3C0512C, remove the 0 Ohm R24, 25, 26, 27 resistors and insert the amp meter in the 2-pins header J6 (not mounted by default).

To measure the power consumption on the AT32UC3C0512C VDDIO, remove the 0 Ohm R26 resistor and insert the amp meter in the 2-pins header J5 (not mounted by default).

To measure the power consumption on the AT32UC3C0512C VDDIN, remove the 0 Ohm R25 resistor and insert the amp meter in the 2-pins header J4 (not mounted by default).

To measure the power consumption on the AT32UC3C0512C VDDANA, remove the 0 Ohm R24 resistor and insert the amp meter in the 2-pins header J3 (not mounted by default).

Figure 4-4. Atmel AT32UC3C-EK Power Consumption Measurement Headers Location
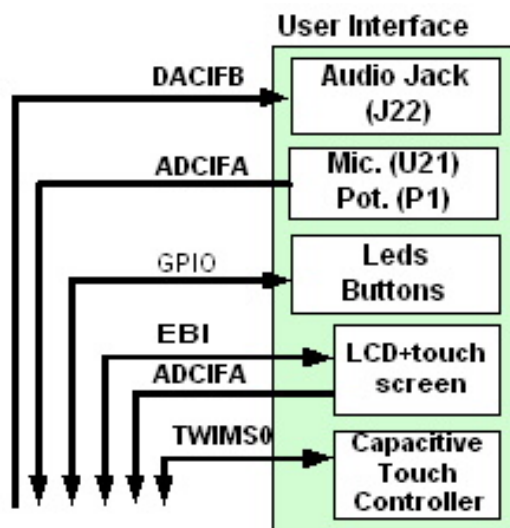

4.2 User Interface

The main User Interface block of the AT32UC3C-EK features all components providing a HMI (visual (output) or tactile (input)) to the user.

4.2.1 Overview

Figure 4-5. Atmel AT32UC3C-EK User Interface Logical View

The main User Interface offered by the kit is the touch user interface consisting of the:

- 6x button sensors interfaced through the TWI interface of the Atmel AT32UC3C0512C and a QVGA LCD display interfaced through the EBI interface of the AT32UC3C0512C with touch screen interfaced through the ADCIFA interface of the AT32UC3C0512C.
- 4x general purpose LEDs (labeled LED0, LED1, LED2, and LED3) connected to the AT32UC3C0512C.
- The 2x push-button labeled PB0 and PB1 used as general purpose push-button.
- The push-buttons labeled RST used to generate an external reset to the AT32UC3C0512C.
- An audio jack header is connected to one channel of the DACIFB IP of the AT32UC3C0512C.
- A microphone and a potentiometer each connected to one channel of the ADCIFA interface of the AT32UC3C0512C.

Note that there are other user interface components in the kit, these are related to:

- the USB Interface is presented in section 4.8 of this document,
- the Virtual Com Port Interface is presented in section 4.7 of this document.

4.2.3 Configuration & Test Points

4.2.3.1 Hardware Configuration

The default hardware configuration of the User Interface block connects the QVGA LCD Display is connected through parallel interface (with EBI). To switch to the serial interface (with SPI):

- Remove the 0 Ohm R44 and R52 resistors.
- Mount the 0 Ohm R48 and R54 resistors.

4.2.3.2 Test Points

A few test points covering the User Interface block have been placed on the Atmel AT32UC3C-EK for the verification of important signals.

Table 4-6. User Interface block Test Points

4.3 Networking

The networking block of the AT32UC3C-EK covers all components providing CAN and LIN bus interfaces through DB9 connectors and 3-pins headers.

4.3.1 Overview

Figure 4-8. Atmel AT32UC3C-EK Networking Logical View
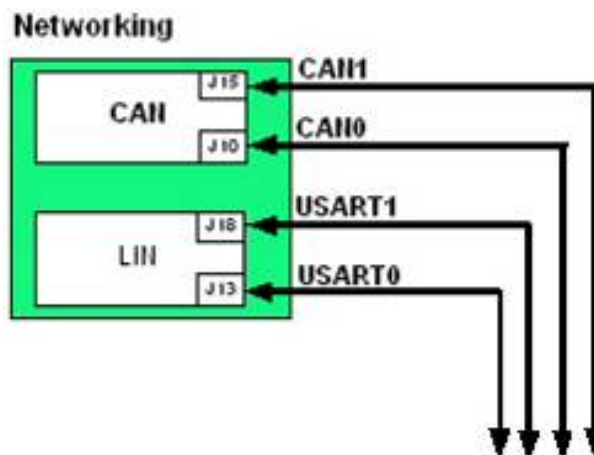

The networking block supports both CAN and LIN interface:

• The CAN transceivers are embedded on the UC3C-EK (U9 and U11) and termination resistors can be used as bus configuration through 2-pin headers (J9 and J14). See 4.1.3.1 section. The physical connections of CAN bus are accessible through DB9 connectors (J10 and J15).

• The LIN transceivers are embedded on the UC3C-EK (U10 and U12). The master/slave configurations are accessible through 2-pin headers (J12 and J17). The board supports also the capability to be powered-up by LIN bus through 2 pin headers (J11 and J16). See 4.1.3.1 section. The physical connections of LIN bus are accessible through 3-pins headers (J13 and J18).

88	PC15	RX LIN1	RX LIN
89	PC16	TX LIN1	TX LIN

4.3.3 Configuration

4.3.3.1 Hardware Configuration

- The terminal resistors are mounted by default. Remove jumpers on the 2-pins headers (J9 or J14) to suppress this termination.
- The default hardware configuration of the LIN block implies that 2 nodes are in master configuration. Only remove jumpers on the 2-pins headers (J12 or J17) to switch the node in slave configuration. Moreover, the board is by default powered
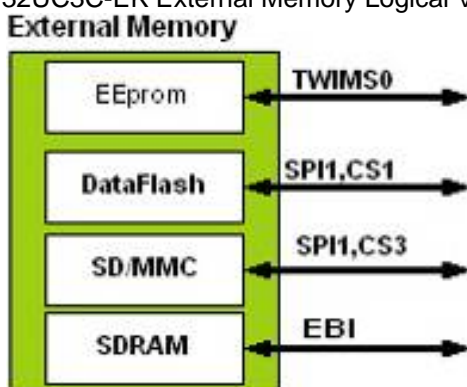

by the LIN bus. To suppress this feature, remove jumpers on the 2-pins headers (J11 or J16).

4.4 External Memory

The External Memory on the Atmel AT32UC3C-EK provides extra memory to the Atmel AT32UC3C0512C.

4.4.1 Overview

Figure 4-10. Atmel AT32UC3C-EK External Memory Logical View

The AT32UC3C-EK implements:

- a 128-bits Atmel EEPROM device (AT24C128) connected to the TWIMS0 interface of the Atmel AT32UC3C0512C and referenced as U8,

- a 64 Mbit Atmel Dataflash device (AT45DB642D-CNU) connected to the SPI1 interface (chip select 1) of the AT32UC3C0512C and referenced as U7,

- a SD/MMC slot connected to the SPI1 interface (chip select 3) of the AT32UC3C0512C and referenced as J7,

- a 256 Mbit SDRAM (MT48LC16M16A2) connected to the EBI interface of the AT32UC3C0512C and referenced as U6.

4.5 Programming & Debugging Interface

The Programming & Debugging Interface block of the Atmel AT32UC3C-EK provides the developer a mean to debug an application running on the Atmel AT32UC3C0512C.

4.5.1 Overview

Figure 4-12. Atmel AT32UC3C-EK Programming & Debugging Interface Logical View
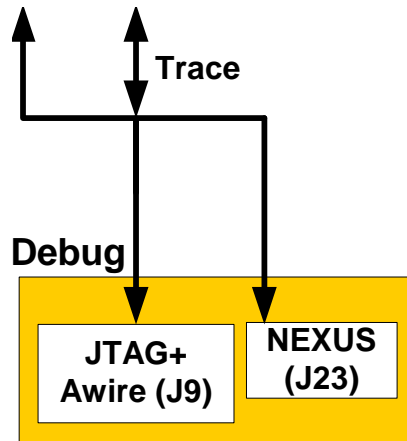

The main Programming and Debugging Interface of the AT32UC3C-EK is meant to program and debug the Atmel AT32UC3C0512C. There are two debug interfaces implemented in the AT32UC3C0512C: the JTAG interface accessible through the *J24* connector and the NEXUS interface accessible through the *J23* connector.

Figure 4-13. AT32UC3C-EK Top View Programming and Debugging Interface Location
4.5.2 UC3C-Specific Information

18	PB15	N.A.	MDO[4]
17	PB14	N.A.	MDO[3]
46	PA27	N.A.	MDO[2]
45	PA26	N.A.	MDO[1]
36	PA19	N.A.	MDO[0]
138	PD29	N.A.	EVTO_N
65	PB26	N.A.	MCKO
64	PB25	N.A.	MSEO[1]
57	PB18	N.A.	MSEO[0]

4.5.3 Configuration and Test Points

4.5.3.1 Special Considerations for the NEXUS pins

On the Atmel AVR UC3 C series, the NEXUS pins are multiplexed with I/O lines. While using these multiplexed NEXUS lines all normal peripheral activity on these lines is disabled. The user must make sure that no external peripheral is blocking the NEXUS lines while debugging.

Table 4-15 highlights the components of the Atmel AT32UC3C-EK that might interfere with the multiplexed NEXUS pins. These components must not be used while debugging with the NEXUS interface.

Table 4-15. Conflicts Conditions over the NEXUS Debugging Pins

QFP144 pin	GPIO	Conflict conditions
18	PB15	Nexus pin in conflict with Wireless (WLESS) CTS Signal
17	PB14	Nexus pin in conflict with Wireless (WLESS) RTS Signal
64	PB25	Nexus pin in conflict with Wireless (WLESS) CS Signal

To summarize, debugging on NEXUS will not work if:

• The WLESS connector is used.

4.5.3.2 Test Points

A few test points covering the Programming and Debugging Interface block have been placed on the AT32UC3C-EK for the verification of important signals.

Table 4-16. Programming and Debugging Interface block Test Points

Designation	Feature
TP57	JTAG.TCK
TP58	JTAG.TDO
TP59	JTAG.TMS
TP60	JTAG.TDI
TP61	GND
TP62	VCC3
TP63	RESET_N

4.5.3.3 Using the aWire

The Atmel AVR ONE! and JTAGICE mkII tools can interface with the Atmel AVR UC3 C series using the single-wire aWire interface available on J24. Check the documentation of these tools to know the recommended pinout to connect to an aWire target.
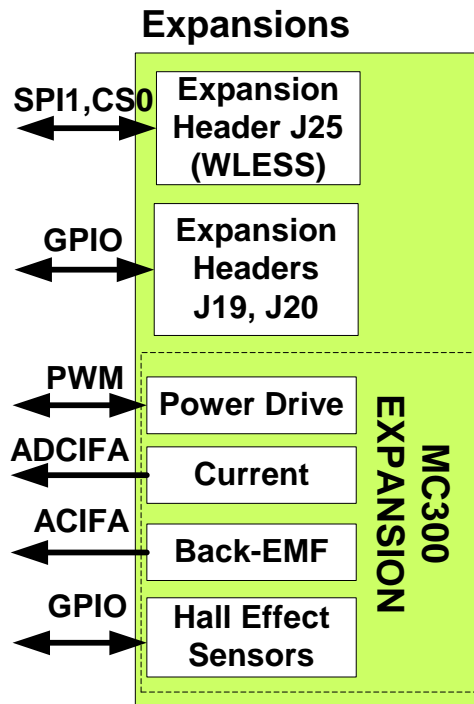

4.6 Expansions Interface

The Expansions interface on the AT32UC3C-EK offers the possibility to connect various external devices to the Atmel AT32UC3C0512C.

4.6.1 Overview

**Figure 4-14.** Atmel AT32UC3C-EK Expansions Interface Logical View

There are three expansion headers on the Atmel AT32UC3C-EK:

- The *J25* header (labeled WLESS) to connect the wireless extension board to provide wireless communication capabilities to the kit. Signals on *J25*.1 and *J25*.2 are configurable with the *J44* header. The Atmel AT32UC3C0512C modules available on *J25* are USART1 and SPI1; depending on the *J44* configuration, TWIMS0 is available too.

- The *J19* and *J20* headers provide access to several GPIOs of the AT32UC3C0512C and ground and VCC3.

- The Atmel AVRMC300 expansion offers the possibility to connect an AVRMC300 expansion motor control board:

    o The *J33* header provides access to the power driver control signals (PWM signals).

    o The *J38* header provides access to the current and back-EMF measurement (ADC and AC signals).

    o The *J41* header provides access to Hall-Effect sensors (GPIO signals).

    o The *J43* header provides access to quadrature decoder sensors (QDEC signals).

- Refer to section 3.4.4 for more detailed information.

4.6.3 Configuration and Test Points

4.6.3.1 Configuration

The J25.1 and J25.2 pins are configurable through the *J44* header. Refer to Table 4-17, for a description of the possible configurations.

4.6.3.2 AVRMC300 Configuration

The XL and XH signals are multiplexed with NEXUS signals. Due to that, 0 ohm resistors (*R160* and *R162*) are inserted between these signals and I/O signals. There are not mounted by default. It means NEXUS signals are functional. Just mount these resistors to activate XL and XH signals.

The differential measures and comparator detections are multiplexed. Due to that, 0 ohm resistors (*R157*, *R158*, *R159* and *R161*) are inserted. As there are mounted by default, differential measures and comparator detections are accessible.
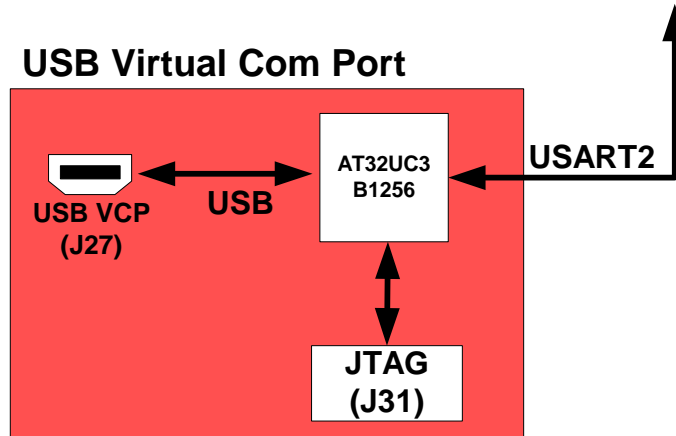

4.6.3.3 Test Points

None.

4.7 USB Virtual Com Port Interface

The USB Virtual Com Port interface on the Atmel AT32UC3C-EK offers USB CDC Serial Com Port communication capabilities to the Atmel AT32UC3C0512C through the on-board Atmel AT32UC3B1256 device.

4.7.1 Overview

Figure 4-16. Atmel AT32UC3C-EK USB Virtual Com Port Interface Logical View

The USB Virtual Com Port interface provides two features to the Atmel AT32UC3C-EK kit:

- USB communication,
- Power supply (see section 4.1 for a description of that feature).

The USB controller is the Atmel AT32UC3B1256.

The AT32UC3B1256 comes pre-loaded with several firmwares:

- A USB DFU Bootloader (accessible upon power-up when the J28 header is closed (see Figure 4-16 for the location of the J31 header)) to re-program the AT32UC3B1256.
- A USB CDC-USART bridge (aka a USB CDC Virtual Com Port) where every data character received from USB is sent to the Atmel AT32UC3C0512C's USART2 and every character received from the AT32UC3C0512C's USART2 is sent to USB.

The source code of these firmwares is available in the ASF (ref. section 3.4.6).

Warning note: programming the AT32UC3B1256 will overwrite the default firmware.

The AT32UC3B1256 can be debugged through the JTAG interface J31 header.

The AT32UC3B1256 is connected to the AT32UC3C0512C's USART2 TX and RX pins.

Figure 4-17. Atmel AT32UC3C-EK Top View USB Virtual Com Port Interface Location
4.7.2 UC3C-Specific Information

QFP144 pin	GPIO	GPIO alternate function	Feature
78	PC05	USART2.RXD	USART2 RX line
77	PC04	USART2.TXD	USART2 TX line

4.7.3 Configuration & Test Points

4.7.3.1 AT32UC3CB1256 Default Firmware Configuration

The default firmware pre-loaded on the Atmel AT32UC3B1256 is dynamically configurable upon power-up:

- The USB DFU Bootloader can be enabled by closing the *J28* jumper; use flip/batchisp to read/write resources on the AT32UC3B1256 through the bootloader.

Warning note: programming the AT32UC3B1256 will overwrite the default firmware.

4.7.3.2 Test Points

A few test points covering the USB Interface block have been placed on the Atmel AT32UC3C-EK for the verification of important signals.

Table 4-25. USB Interface block Test Points

Designation	Feature
TP64	VBUS
TP65	D-
TP66	D+
TP67	GND
TP68	JTAG.TCK.UC3B
TP69	JTAG.TDO.UC3B
TP70	JTAG.TMS.UC3B
TP71	JTAG.TDI.UC3B
TP72	RESET_N.UC3B

4.8 USB Interface

The USB interface on the AT32UC3C-EK demonstrates the USB device and embedded host communication capabilities of the Atmel AT32UC3C0512C.
4.8.1 Overview

Figure 4-18. AT32UC3C-EK USB Interface Logical View
The USB interface provides two features to the AT32UC3C-EK kit:

- USB communication.
- Power supply (see section 4.1 for a description of that feature) in USB device mode.

Figure 4-19. Atmel AT32UC3C-EK Top View USB Interface Location

4.8.2 UC3C-Specific Information

4.8.2.1 AT32UC3C0512C pinout for the USB Interface block

Table 4-26. UC3C pinout for the USB Interface block

71	PC00	GPIO[64]	USB ID
10	PB07	GPIO[39]	USB Over Current

4.8.3 Configuration

4.8.3.1 Bootloader

A USB DFU Bootloader is pre-loaded on the Atmel AT32UC3C0512C. To enter this bootloader mode, the PB0 push-button must be pressed upon reset, then released. It is then possible to program the AT32UC3C0512C through the USB DFU Bootloader (see App note http://www.atmel.com/dyn/products/app_notes.asp?family_id=607)

.

Figure 4-20. Atmel AT32UC3C-EK Top View USB Bootloader Interface Location
4.8.3.2 USB Over Current Detection

By default the overcurrent detection is not enabled. To enable this feature:

- Mount R85 resistor.

4.9 AT32UC3C0512C

The Atmel AT32UC3C0512C is the central point of the Atmel AT32UC3C-EK.

4.9.1 Overview

See Figure 3-1 for a logical view representing a logical view of the AT32UC3C0512C in the kit.

The AT32UC3C0512C is powered from the Power Supply block. For a detailed presentation of the Power Supply block, see section 4.1.

The AT32UC3C0512C is in charge of the main User Interface block:

- The touch sensors,
- The LEDs LED0-4,
- The 2x push-button,
- The RST push-button,
- The QVGA LCD Display,
- The microphone and audio jack.

For a detailed presentation of the User Interface block, see section 4.2.

The AT32UC3C0512C can be programmed and debugged through the Programming & Debugging Interface block that provides JTAG or aWire access. For a detailed presentation of the Programming & Debugging Interface block, see section

Programming & Debugging Interface.

The AT32UC3C0512C has access to:

- 1x external on-board Atmel DataFlash 64 Mbit memory.
- 1x external on-board Atmel EEPROM 128-bits memory.
- 1x external on-board SDRAM 256 Mbits memory.
- 1x external on-board SD/MMC slot.

For a detailed presentation of the External Memory block, see section 4.4.

4x networking interfaces available on AT32UC3C0512C are accessible:

- 2x CAN Interfaces.
- 2x LIN Interfaces.

For a detailed presentation of the networking block, see section 4.3.

The expansion interface offers the possibility to connect various external devices to the AT32UC3C0512C. The *J25* connector (labeled WLESS) is dedicated to interface to wireless extension board (obviously dedicated firmware must be running on the AT32UC3C0512C to support that feature). For a detailed presentation of the expansion Interface block, see section 4.6.

The AVRMC300 expansion headers offer the possibility to connect AVRMC300 additional board to the AT32UC3C0512C. For a detailed presentation of the AVRMC300 expansion Interface block, see section 4.6.3.2.

The USB communication capabilities of the Atmel AT32UC3C0512C interface is also demonstrated and accessible through a mini-B connector. For a detailed presentation of the USB Interface block, see section 4.8.

4.9.2.1 Configuration

A USB DFU Bootloader is pre-loaded on the Atmel AT32UC3C0512C. To enter this bootloader mode, the PB0 push-button must be pressed upon reset then released. It is then possible to program the AT32UC3C0512C through the USB DFU Bootloader.

5 EVALUATION BOARD/KIT – IMPORTANT NOTICE

This evaluation board/kit is intended for use for **FURTHER ENGINEERING, DEVELOPMENT, DEMONSTRATION, OR EVALUATION PURPOSES ONLY.** It is not a finished product and may not (yet) comply with some or any technical or legal requirements that are applicable to finished products, including, without limitation, directives regarding electromagnetic compatibility, recycling (WEEE), FCC, CE or UL (except as may be otherwise noted on the board/kit). Atmel supplied this board/kit "AS IS," without any warranties, with all faults, at the buyer's and further users' sole risk. The user assumes all responsibility and liability for proper and safe handling of the goods. Further, the user indemnifies Atmel from all claims arising from the handling or use of the goods. Due to the open construction of the product, it is the user's responsibility to take any and all appropriate precautions with regard to electrostatic discharge and any other technical or legal concerns.

EXCEPT TO THE EXTENT OF THE INDEMNITY SET FORTH ABOVE, NEITHER USER NOR ATMEL SHALL BE LIABLE TO EACH OTHER FOR ANY INDIRECT, SPECIAL, INCIDENTAL, OR CONSEQUENTIAL DAMAGES.

No license is granted under any patent right or other intellectual property right of Atmel covering or relating to any machine, process, or combination in which such Atmel products or services might be or are used.
