

DS90LV012A /DS90LT012A 3V LVDS Single CMOS Differential Line Receiver

Check for Samples: [DS90LT012A](#), [DS90LV012A](#)

FEATURES

- Compatible with ANSI TIA/EIA-644-A Standard
- >400 Mbps (200 MHz) switching rates
- 100 ps differential skew (typical)
- 3.5 ns maximum propagation delay
- Integrated line termination resistor (102Ω typical)
- Single 3.3V power supply design (2.7V to 3.6V range)
- Power down high impedance on LVDS inputs
- Accepts small swing (350 mV typical) differential signal levels
- LVDS receiver inputs accept LVDS/BLVDS/LVPECL inputs
- Supports open, short and terminated input fail-safe
- Pinout simplifies PCB layout
- Low Power Dissipation (10mW typical@ 3.3V static)
- SOT-23 5-lead package
- Leadless WSON-8 package (3x3 mm body size)
- Electrically similar to the DS90LV018A
- Fabricated with advanced CMOS process technology
- Industrial temperature operating range (–40°C to +85°C)

DESCRIPTION

The DS90LV012A and DS90LT012A are single CMOS differential line receivers designed for applications requiring ultra low power dissipation, low noise, and high data rates. The devices are designed to support data rates in excess of 400 Mbps (200 MHz) utilizing Low Voltage Differential Swing (LVDS) technology

The DS90LV012A and DS90LT012A accept low voltage (350 mV typical) differential input signals and translates them to 3V CMOS output levels. The receivers also support open, shorted, and terminated (100Ω) input fail-safe. The receiver output will be HIGH for all fail-safe conditions. The DS90LV012A has a pinout designed for easy PCB layout. The DS90LT012A includes an input line termination resistor for point-to-point applications.

The DS90LV012A and DS90LT012A, and companion LVDS line driver provide a new alternative to high power PECL/ECL devices for high speed interface applications.

Truth Table

INPUTS	OUTPUT
[IN+] – [IN-]	TTL OUT
$V_{ID} \geq 0V$	H
$V_{ID} \leq -0.1V$	L
Full Fail-safe OPEN/SHORT or Terminated	H

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

Absolute Maximum Ratings ⁽¹⁾

Supply Voltage (V_{DD})	–0.3V to +4V
Input Voltage ($IN+$, $IN-$)	–0.3V to +3.9V
Output Voltage (TTL OUT)	–0.3V to ($V_{DD} + 0.3V$)
Output Short Circuit Current	–100mA
Maximum Package Power Dissipation @ +25°C	
NGK Package	2.26 W
Derate NGK Package	18.1 mW/°C above +25°C
Thermal resistance (θ_{JA})	55.3°C/W
DBV Package	902mW
Derate DBV Package	7.22 mW/°C above +25°C
Thermal resistance (θ_{JA})	138.5°C/W
Storage Temperature Range	–65°C to +150°C
Lead Temperature Range Soldering (4 sec.)	+260°C
Maximum Junction Temperature	+150°C
ESD Ratings ⁽²⁾	

- (1) “Absolute Maximum Ratings” are those values beyond which the safety of the device cannot be ensured. They are not meant to imply that the devices should be operated at these limits. [Electrical Characteristics](#) specifies conditions of device operation.
- (2) ESD Ratings:
- (a) DS90LV012A:
 - (a) HBM (1.5 k Ω , 100 pF) $\geq$ 2kV
 - (b) EIAJ (0 Ω , 200 pF) $\geq$ 900V
 - (c) CDM $\geq$ 2000V
 - (d) IEC direct (330 Ω , 150 pF) $\geq$ 5kV
 - (b) DS90LT012A:
 - (a) HBM (1.5 k Ω , 100 pF) $\geq$ 2kV
 - (b) EIAJ (0 Ω , 200 pF) $\geq$ 700V
 - (c) CDM $\geq$ 2000V
 - (d) IEC direct (330 Ω , 150 pF) $\geq$ 7kV

Recommended Operating Conditions

	Min	Typ	Max	Units
Supply Voltage (V_{DD})	+2.7	+3.3	+3.6	V
Operating Free Air Temperature (T_A)	–40	25	+85	°C

Electrical Characteristics

Over Supply Voltage and Operating Temperature ranges, unless otherwise specified. ⁽¹⁾ ⁽²⁾

- (1) Current into device pins is defined as positive. Current out of device pins is defined as negative. All voltages are referenced to ground unless otherwise specified (such as V_{ID}).
- (2) All typicals are given for: $V_{DD} = +3.3V$ and $T_A = +25^\circ C$.

Electrical Characteristics (continued)

Over Supply Voltage and Operating Temperature ranges, unless otherwise specified. ⁽¹⁾ ⁽²⁾

Symbol	Parameter	Conditions		Pin	Min	Typ	Max	Units
V _{TH}	Differential Input High Threshold	V _{CM} dependant on V _{DD} ⁽³⁾		IN+, IN-		-30	0	mV
V _{TL}	Differential Input Low Threshold				-100	-30		mV
V _{CM}	Common-Mode Voltage	V _{DD} = 2.7V, V _{ID} = 100mV			0.05		2.35	V
		V _{DD} = 3.0V to 3.6V, V _{ID} = 100mV			0.05		V _{DD} - 0.3V	V
I _{IN}	Input Current (DS90LV012A)	V _{IN} = +2.8V	V _{DD} = 3.6V or 0V		-10	±1	+10	µA
		V _{IN} = 0V			-10	±1	+10	µA
		V _{IN} = +3.6V	V _{DD} = 0V		-20		+20	µA
ΔI _{IN}	Change in Magnitude of I _{IN}	V _{IN} = +2.8V	V _{DD} = 3.6V or 0V			4		µA
		V _{IN} = 0V				4		µA
		V _{IN} = +3.6V	V _{DD} = 0V			4		µA
I _{IND}	Differential Input Current	V _{IN+} = +0.4V, V _{IN-} = +0V		3	3.9	4.4	mA	
	(DS90LT012A)	V _{IN+} = +2.4V, V _{IN-} = +2.0V						
R _T	Integrated Termination Resistor (DS90LT012A)				102		Ω	
C _{IN}	Input Capacitance	IN+ = IN- = GND			3		pF	
V _{OH}	Output High Voltage	I _{OH} = -0.4 mA, V _{ID} = +200 mV		TTL OUT	2.4	3.1		V
		I _{OH} = -0.4 mA, Inputs terminated			2.4	3.1		V
		I _{OH} = -0.4 mA, Inputs shorted			2.4	3.1		V
V _{OL}	Output Low Voltage	I _{OL} = 2 mA, V _{ID} = -200 mV			0.3	0.5	V	
I _{OS}	Output Short Circuit Current	V _{OUT} = 0V ⁽⁴⁾			-15	-50	-100	mA
V _{CL}	Input Clamp Voltage	I _{CL} = -18 mA			-1.5	-0.7		V
I _{DD}	No Load Supply Current	Inputs Open		V _{DD}		5.4	9	mA

(3) V_{DD} is always higher than IN+ and IN- voltage. IN+ and IN- are allowed to have voltage range -0.05V to +2.35V when V_{DD} = 2.7V and |V_{ID}| / 2 to V_{DD} - 0.3V when V_{DD} = 3.0V to 3.6V. V_{ID} is not allowed to be greater than 100 mV when V_{CM} = 0.05V to 2.35V when V_{DD} = 2.7V or when V_{CM} = |V_{ID}| / 2 to V_{DD} - 0.3V when V_{DD} = 3.0V to 3.6V.

(4) Output short circuit current (I_{OS}) is specified as magnitude only, minus sign indicates direction only. Only one output should be shorted at a time, do not exceed maximum junction temperature specification.

Switching Characteristics

Over Supply Voltage and Operating Temperature ranges, unless otherwise specified. ⁽¹⁾ ⁽²⁾

Symbol	Parameter	Conditions	Min	Typ	Max	Units
t_{PHLD}	Differential Propagation Delay High to Low	$C_L = 15 \text{ pF}$ $V_{ID} = 200 \text{ mV}$ (Figure 5 and Figure 6)	1.0	1.8	3.5	ns
t_{PLHD}	Differential Propagation Delay Low to High		1.0	1.7	3.5	ns
t_{SKD1}	Differential Pulse Skew $ t_{PHLD} - t_{PLHD} $ ⁽³⁾		0	100	400	ps
t_{SKD3}	Differential Part to Part Skew ⁽⁴⁾		0	0.3	1.0	ns
t_{SKD4}	Differential Part to Part Skew ⁽⁵⁾		0	0.4	1.5	ns
t_{TLH}	Rise Time			350	800	ps
t_{THL}	Fall Time			175	800	ps
f_{MAX}	Maximum Operating Frequency ⁽⁶⁾		200	250		MHz

(1) C_L includes probe and jig capacitance.

(2) Generator waveform for all tests unless otherwise specified: $f = 1 \text{ MHz}$, $Z_O = 50\Omega$, t_r and t_f (0% to 100%) $\leq 3 \text{ ns}$ for $IN_{\pm}$.

(3) t_{SKD1} is the magnitude difference in differential propagation delay time between the positive-going-edge and the negative-going-edge of the same channel.

(4) t_{SKD3} , part to part skew, is the differential channel-to-channel skew of any event between devices. This specification applies to devices at the same V_{DD} and within 5°C of each other within the operating temperature range.

(5) t_{SKD4} , part to part skew, is the differential channel-to-channel skew of any event between devices. This specification applies to devices over the recommended operating temperature and voltage ranges, and across process distribution. t_{SKD4} is defined as $|Max - Min|$ differential propagation delay.

(6) f_{MAX} generator input conditions: $t_r = t_f < 1 \text{ ns}$ (0% to 100%), 50% duty cycle, differential (1.05V to 1.35 peak to peak). Output criteria: 60%/40% duty cycle, V_{OL} (max 0.4V), V_{OH} (min 2.4V), load = 15 pF (stray plus probes). The parameter is ensured by design. The limit is based on the statistical analysis of the device over the PVT range by the transition times (t_{TLH} and t_{THL}).

TYPICAL APPLICATIONS

Balanced System

Figure 7. Point-to-Point Application (DS90LV012A)

Balanced System

Figure 8. Point-to-Point Application (DS90LT012A)

APPLICATION INFORMATION

General application guidelines and hints for LVDS drivers and receivers may be found in the following application notes: LVDS Owner's Manual ([SNLA187](#)), AN-808 ([SNLA028](#)), AN-977 ([SNLA166](#)), AN-971 ([SNLA165](#)), AN-916 ([SNLA219](#)), AN-805 ([SNOA233](#)), AN-903 ([SNLA034](#)).

LVDS drivers and receivers are intended to be primarily used in an uncomplicated point-to-point configuration as is shown in [Figure 7](#). This configuration provides a clean signaling environment for the fast edge rates of the drivers. The receiver is connected to the driver through a balanced media which may be a standard twisted pair cable, a parallel pair cable, or simply PCB traces. Typically the characteristic impedance of the media is in the range of 100Ω. A termination resistor of 100Ω should be selected to match the media, and is located as close to the receiver input pins as possible. The termination resistor converts the driver output (current mode) into a voltage that is detected by the receiver. Other configurations are possible such as a multi-receiver configuration, but the effects of a mid-stream connector(s), cable stub(s), and other impedance discontinuities as well as ground shifting, noise margin limits, and total termination loading must be taken into account.

The DS90LV012A and DS90LT012A differential line receivers are capable of detecting signals as low as 100 mV, over a ±1V common-mode range centered around +1.2V. This is related to the driver offset voltage which is typically +1.2V. The driven signal is centered around this voltage and may shift ±1V around this center point. The ±1V shifting may be the result of a ground potential difference between the driver's ground reference and the receiver's ground reference, the common-mode effects of coupled noise, or a combination of the two. The AC parameters of both receiver input pins are optimized for a recommended operating input voltage range of 0V to +2.4V (measured from each pin to ground). The device will operate for receiver input voltages up to V_{DD} , but exceeding V_{DD} will turn on the ESD protection circuitry which will clamp the bus voltages.

POWER DECOUPLING RECOMMENDATIONS

Bypass capacitors must be used on power pins. Use high frequency ceramic (surface mount is recommended) 0.1μF and 0.001μF capacitors in parallel at the power supply pin with the smallest value capacitor closest to the device supply pin. Additional scattered capacitors over the printed circuit board will improve decoupling. Multiple vias should be used to connect the decoupling capacitors to the power planes. A 10μF (35V) or greater solid tantalum capacitor should be connected at the power entry point on the printed circuit board between the supply and ground.

PC BOARD CONSIDERATIONS

Use at least 4 PCB board layers (top to bottom): LVDS signals, ground, power, TTL signals.

Isolate TTL signals from LVDS signals, otherwise the TTL signals may couple onto the LVDS lines. It is best to put TTL and LVDS signals on different layers which are isolated by a power/ground plane(s).

Keep drivers and receivers as close to the (LVDS port side) connectors as possible.

For PC board considerations for the WSON package, please refer to application note AN-1187 "Leadless Leadframe Package" ([SNOA401](#)). It is important to note that to optimize signal integrity (minimize jitter and noise coupling), the WSON thermal land pad, which is a metal (normally copper) rectangular region located under the package, should be attached to ground and match the dimensions of the exposed pad on the PCB (1:1 ratio).

DIFFERENTIAL TRACES

Use controlled impedance traces which match the differential impedance of your transmission medium (ie. cable) and termination resistor. Run the differential pair trace lines as close together as possible as soon as they leave the IC (stubs should be < 10mm long). This will help eliminate reflections and ensure noise is coupled as common-mode. In fact, we have seen that differential signals which are 1mm apart radiate far less noise than traces 3mm apart since magnetic field cancellation is much better with the closer traces. In addition, noise induced on the differential lines is much more likely to appear as common-mode which is rejected by the receiver.

Match electrical lengths between traces to reduce skew. Skew between the signals of a pair means a phase difference between signals which destroys the magnetic field cancellation benefits of differential signals and EMI will result! (Note that the velocity of propagation, $v = c/E_r$, where c (the speed of light) = 0.2997mm/ps or 0.0118 in/ps). Do not rely solely on the autoroute function for differential traces. Carefully review dimensions to match differential impedance and provide isolation for the differential lines. Minimize the number of vias and other discontinuities on the line.

Avoid 90° turns (these cause impedance discontinuities). Use arcs or 45° bevels.

Within a pair of traces, the distance between the two traces should be minimized to maintain common-mode rejection of the receivers. On the printed circuit board, this distance should remain constant to avoid discontinuities in differential impedance. Minor violations at connection points are allowable.

TERMINATION

DS90LV012A:

Use a termination resistor which best matches the differential impedance or your transmission line. The resistor should be between 90Ω and 130Ω. Remember that the current mode outputs need the termination resistor to generate the differential voltage. LVDS will not work without resistor termination. Typically, connecting a single resistor across the pair at the receiver end will suffice.

Surface mount 1% - 2% resistors are the best. PCB stubs, component lead, and the distance from the termination to the receiver inputs should be minimized. The distance between the termination resistor and the receiver should be < 10mm (12mm MAX).

DS90LT012A:

The DS90LT012A integrates the terminating resistor for point-to-point applications. The resistor value will be between 90Ω and 133Ω.

THRESHOLD

The LVDS Standard (ANSI/TIA/EIA-644-A) specifies a maximum threshold of ±100mV for the LVDS receiver. The DS90LV012A and DS90LT012A support an enhanced threshold region of -100mV to 0V. This is useful for fail-safe biasing. The threshold region is shown in the Voltage Transfer Curve (VTC) in Figure 9. The typical DS90LV012A or DS90LT012A LVDS receiver switches at about -30mV. Note that with $V_{ID} = 0V$, the output will be in a HIGH state. With an external fail-safe bias of +25mV applied, the typical differential noise margin is now the difference from the switch point to the bias point. In the example below, this would be 55mV of Differential Noise Margin (+25mV - (-30mV)). With the enhanced threshold region of -100mV to 0V, this small external fail-safe biasing of +25mV (with respect to 0V) gives a DNM of a comfortable 55mV. With the standard threshold region of ±100mV, the external fail-safe biasing would need to be +25mV with respect to +100mV or +125mV, giving a DNM of 155mV which is stronger fail-safe biasing than is necessary for the DS90LV012A or DS90LT012A. If more DNM is required, then a stronger fail-safe bias point can be set by changing resistor values.

Figure 9. VTC of the DS90LV012A and DS90LT012A LVDS Receivers

FAIL-SAFE FEATURE

The LVDS receiver is a high gain, high speed device that amplifies a small differential signal (20mV) to CMOS logic levels. Due to the high gain and tight threshold of the receiver, care should be taken to prevent noise from appearing as a valid signal.

The receiver's internal fail-safe circuitry is designed to source/sink a small amount of current, providing fail-safe protection (a stable known state of HIGH output voltage) for floating, terminated or shorted receiver inputs.

1. **Open Input Pins.** The DS90LV012A and DS90LT012A are single receiver devices. It is not required to tie the receiver inputs to ground or any supply voltage. Internal failsafe circuitry will ensure a HIGH, stable output state for open inputs.
2. **Terminated Input.** If the driver is disconnected (cable unplugged), or if the driver is in a power-off condition, the receiver output will again be in a HIGH state, even with the end of cable 100 Ω termination resistor across the input pins. The unplugged cable can become a floating antenna which can pick up noise. If the cable picks up more than 10mV of differential noise, the receiver may see the noise as a valid signal and switch. To insure that any noise is seen as common-mode and not differential, a balanced interconnect should be used. Twisted pair cable will offer better balance than flat ribbon cable.
3. **Shorted Inputs.** If a fault condition occurs that shorts the receiver inputs together, thus resulting in a 0V differential input voltage, the receiver output will remain in a HIGH state. Shorted input fail-safe is not supported across the common-mode range of the device (GND to 2.4V). It is only supported with inputs shorted and no external common-mode voltage applied.

External lower value pull up and pull down resistors (for a stronger bias) may be used to boost fail-safe in the presence of higher noise levels. The pull up and pull down resistors should be in the 5k Ω to 15k Ω range to minimize loading and waveform distortion to the driver. The common-mode bias point should be set to approximately 1.2V (less than 1.75V) to be compatible with the internal circuitry.

The DS90LV012A and DS90LT012A are compliant to the original ANSI EIA/TIA-644 specification and is also compliant to the new ANSI EIA/TIA-644-A specification with the exception the newly added ΔI_{IN} specification. Due to the internal fail-safe circuitry, ΔI_{IN} cannot meet the 6 μ A maximum specified. This exception will not be relevant unless more than 10 receivers are used.

Additional information on fail-safe biasing of LVDS devices may be found in AN-1194 ([SNLA051](#)).

PROBING LVDS TRANSMISSION LINES

Always use high impedance (> 100k Ω), low capacitance (< 2 pF) scope probes with a wide bandwidth (1 GHz) scope. Improper probing will give deceiving results.

CABLES AND CONNECTORS, GENERAL COMMENTS

When choosing cable and connectors for LVDS it is important to remember:

Use controlled impedance media. The cables and connectors you use should have a matched differential impedance of about 100 Ω . They should not introduce major impedance discontinuities.

Balanced cables (e.g. twisted pair) are usually better than unbalanced cables (ribbon cable, simple coax) for noise reduction and signal quality. Balanced cables tend to generate less EMI due to field canceling effects and also tend to pick up electromagnetic radiation a common-mode (not differential mode) noise which is rejected by the receiver.

For cable distances < 0.5M, most cables can be made to work effectively. For distances $0.5M \leq d \leq 10M$, CAT 3 (category 3) twisted pair cable works well, is readily available and relatively inexpensive.

Pin Functions

Pin Descriptions

Package Pin Number		Pin Name	Description
SOT-23	WSON		
4	1	IN–	Inverting receiver input pin
3	3	IN+	Non-inverting receiver input pin
5	8	TTL OUT	Receiver output pin
1	6	V _{DD}	Power supply pin, +3.3V ± 0.3V
2	2, 7	GND	Ground pin
	4, 5	NC	No connect

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSELETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

- A. All linear dimensions are in millimeters.
 - B. This drawing is subject to change without notice.
 - C. Body dimensions do not include mold flash or protrusion. Mold flash and protrusion shall not exceed 0.15 per side.
 - D. Falls within JEDEC MO-178 Variation AA.

DBV (R-PDSO-G5)

PLASTIC SMALL OUTLINE

- NOTES:
- A. All linear dimensions are in millimeters.
 - B. This drawing is subject to change without notice.
 - C. Customers should place a note on the circuit board fabrication drawing not to alter the center solder mask defined pad.
 - D. Publication IPC-7351 is recommended for alternate designs.
 - E. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Example stencil design based on a 50% volumetric metal load solder paste. Refer to IPC-7525 for other stencil recommendations.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
