

ISOLATED 3.3-V HALF AND FULL-DUPLEX RS-485 TRANSCEIVERS

Check for Samples: [ISO15](#), [ISO35](#), [ISO15M](#), [ISO35M](#)

FEATURES

- 4000- V_{PK} V_{IOTM} , 560- V_{PK} V_{IORM} per IEC 60747-5-2 (VDE 0884, Rev 2)
- UL 1577, IEC 61010-1, IEC 60950-1 and CSA Approved
- 1/8 Unit Load – Up to 256 Nodes on a Bus
- Meets or Exceeds TIA/EIA RS-485 Requirements
- Signaling Rates up to 1 Mbps
- Thermal Shutdown Protection
- Low Bus Capacitance – 16 pF (Typ)
- 50 kV/ μ s Typical Transient Immunity
- Fail-safe Receiver for Bus Open, Short, Idle
- 3.3-V Inputs are 5-V Tolerant

APPLICATIONS

- Security Systems
- Chemical Production
- Factory Automation
- Motor/motion Control
- HVAC and Building Automation Networks
- Networked Security Stations

DESCRIPTION

The ISO15 is an isolated half-duplex differential line transceiver while the ISO35 is an isolated full-duplex differential line driver and receiver for TIA/EIA 485/422 applications. The ISO15M and ISO35M have extended ambient temperature ratings of -55°C to 125°C while the ISO15 and ISO35 are specified over -40°C to 85°C .

These devices are ideal for long transmission lines since the ground loop is broken to allow for a much larger common-mode voltage range. The symmetrical barrier of the device is tested to provide isolation of 4000 V_{PK} per VDE and 2500 V_{RMS} per UL and CSA between the bus-line transceiver and the logic-level interface.

Any cabled I/O can be subjected to electrical noise transients from various sources. These noise transients can cause damage to the transceiver and/or near-by sensitive circuitry if they are of sufficient magnitude and duration. These isolated devices can significantly increase protection and reduce the risk of damage to expensive control circuits.

PRODUCT	FOOTPRINT	TEMP RATING	MARKING
ISO15	Half Duplex	-40°C to 85°C	ISO15
ISO35	Full Duplex	-40°C to 85°C	ISO35
ISO15M	Half Duplex	-55°C to 125°C	ISO15M
ISO35M	Full Duplex	-55°C to 125°C	ISO35M

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

ABSOLUTE MAXIMUM RATINGS⁽¹⁾

				VALUE	UNIT	
V _{CC}	Input supply voltage. ⁽²⁾ V _{CC1} , V _{CC2}			–0.3 to 6	V	
V _O	Voltage at any bus I/O terminal			–9 to 14	V	
V _{IT}	Voltage input, transient pulse, A, B, Y, and Z (through 100Ω, see Figure 11)			–50 to 50	V	
V _I	Voltage input at any D, DE or $\overline{RE}$ terminal			–0.5 to 7	V	
I _O	Receiver output current			±10	mA	
ESD	Electrostatic discharge	Human Body Model	JEDEC Standard 22, Test Method A114-C.01	Bus pins and GND1	±6	kV
				Bus pins and GND2	±16	
				All pins	±4	
		Charged Device Model	JEDEC Standard 22, Test Method C101	All pins	±1	kV
		Machine Model			ANSI/ESDS5.2-1996	±200
T _J	Maximum junction temperature			170	°C	

- (1) Stresses beyond those listed under *absolute maximum ratings* may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions beyond those indicated under *recommended operating conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) All voltage values except differential I/O bus voltages are with respect to network ground terminal and are peak voltage values

RECOMMENDED OPERATING CONDITIONS

				MIN	TYP	MAX	UNIT
V _{CC}	Supply Voltage, V _{CC1} , V _{CC2}			3.15	3.3	3.6	V
V _{OC}	Voltage at either bus I/O terminal		A, B	−7		12	V
V _{IH}	High-level input voltage		D, DE, $\overline{RE}$	2		V _{CC}	V
V _{IL}	Low-level input voltage			0		0.8	
V _{ID}	Differential input voltage		A with respect to B	−12		12	V
R _L	Differential input resistance			54	60		Ω
I _O	Output current		Driver	−60		60	mA
			Receiver	−8		8	
1/t _{UI}	Signaling rate		ISO15x and ISO35x			1	Mbps
T _A	Ambient temperature		ISO15 and ISO35	−40		85	°C
			ISO15M and ISO35M	−55		125	
T _J	Operating junction temperature		ISO15 and ISO35	−40		150	°C
			ISO15M and ISO35M	−55		150	

SUPPLY CURRENT

over recommended operating condition (unless otherwise noted)

PARAMETER			TEST CONDITIONS		MIN	TYP	MAX	UNIT
I_{CC1}	Logic-side supply current	ISO35x and ISO15x	$\overline{RE}$ at 0 V or V_{CC} , DE at 0 V, No load (driver disabled)				8	mA
			$\overline{RE}$ at 0 V or V_{CC} , DE at V_{CC} , No Load (driver enabled)				8	
I_{CC2}	Bus-side supply current	ISO35x and ISO15x	$\overline{RE}$ at 0 V or V_{CC} , DE at 0 V, No load (driver disabled)				15	mA
			$\overline{RE}$ at 0 V or V_{CC} , DE at V_{CC} , No Load (driver enabled)				19	

DRIVER ELECTRICAL CHARACTERISTICS

PACKAGE CHARACTERISTICS

over recommended operating conditions (unless otherwise noted)

PARAMETER ⁽¹⁾		TEST CONDITIONS	MIN	TYP	MAX	UNIT
L(I01)	Minimum air gap (Clearance)	Shortest terminal to terminal distance through air	8.34			mm
L(I02)	Minimum external tracking (Creepage)	Shortest terminal to terminal distance across the package surface	8.1			mm
CTI	Tracking resistance (Comparative Tracking Index)	DIN IEC 60112 / VDE 0303 Part 1	≥400			V
	Minimum Internal Gap (Internal Clearance)	Distance through the insulation	0.008			mm
R _{IO}	Isolation resistance	Input to output, V _{IO} = 500 V, all pins on each side of the barrier tied together creating a two-terminal device		>10 ¹²		Ω
C _{IO}	Barrier capacitance Input to output	V _I = 0.4 sin (4E6πt)		2		pF
C _I	Input capacitance to ground	V _I = 0.4 sin (4E6πt)		2		pF

- (1) Creepage and clearance requirements should be applied according to the specific equipment isolation standards of an application. Care should be taken to maintain the creepage and clearance distance of a board design to ensure that the mounting pads of the isolator on the printed circuit board do not reduce this distance.

Creepage and clearance on a printed circuit board become equal according to the measurement techniques shown in the Isolation Glossary. Techniques such as inserting grooves and/or ribs on a printed circuit board are used to help increase these specifications.

IEC SAFETY LIMITING VALUES

Safety limiting intends to prevent potential damage to the isolation barrier upon failure of input or output circuitry. A failure of the IO can allow low resistance to ground or the supply and, without current limiting, dissipate sufficient power to overheat the die and damage the isolation barrier potentially leading to secondary system failures.

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT
I_S Safety input, output, or supply current	DW-16 $\theta_{JA} = 212^\circ\text{C/W}$, $V_I = 5.5\text{ V}$, $T_J = 170^\circ\text{C}$, $T_A = 25^\circ\text{C}$			210	mA
T_S Maximum case temperature	DW-16			150	$^\circ\text{C}$

The safety-limiting constraint is the absolute maximum junction temperature specified in the absolute maximum ratings table. The power dissipation and junction-to-air thermal impedance of the device installed in the application hardware determines the junction temperature. The assumed junction-to-air thermal resistance in the Thermal Characteristics table is that of a device installed in the JE5D51-3, Low Effective Thermal Conductivity Test Board for Leaded Surface Mount Packages and is conservative. The power is the recommended maximum input voltage times the current. The junction temperature is then the ambient temperature plus the power times the junction-to-air thermal resistance.

THERMAL CHARACTERISTICS

over recommended operating conditions (unless otherwise noted)

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT
θ_{JA} Junction-to-Air	Low-K Thermal Resistance ⁽¹⁾		168		$^\circ\text{C/W}$
	High-K Thermal Resistance		96.1		
θ_{JB} Junction-to-Board Thermal Resistance			61		$^\circ\text{C/W}$
θ_{JC} Junction-to-Case Thermal Resistance			48		$^\circ\text{C/W}$
P_D Device Power Dissipation	$V_{CC1} = V_{CC2} = 5.25\text{ V}$, $T_J = 150^\circ\text{C}$, $C_L = 15\text{ pF}$, Input a 20 MHz 50% duty cycle square wave			220	mW

(1) Tested in accordance with the Low-K or High-K thermal metric definitions of EIA/JESD51-3 for leaded surface mount packages.

APPLICATION INFORMATION

Transient Voltages

Isolation of a circuit insulates it from other circuits and earth so that noise develops across the insulation rather than circuit components. The most common noise threat to data-line circuits is voltage surges or electrical fast transients that occur after installation. The transient ratings of the ISO15 and ISO35 are sufficient for all but the most severe installations. However, some equipment manufacturers use their ESD generators to test transient susceptibility of their equipment, and can exceed insulation ratings. ESD generators simulate static discharges that may occur during device or equipment handling with low-energy but high voltage transients.

Figure 21 models the ISO15 and ISO35 bus IO connected to a noise generator. C_{IN} and R_{IN} is capacitance or resistance across the device and any other stray or added capacitance or resistance across the A or B pin to GND2. C_{ISO} and R_{ISO} is the capacitance and resistance between GND1 and GND2 of the ISO15 and ISO35 plus those of any other insulation (transformer, etc.). The stray inductance is assumed to be negligible. From this model, the voltage at the isolated bus return is,

$$V_{GND2} = V_N \frac{Z_{ISO}}{Z_{ISO} + Z_{IN}} \quad (1)$$

and will always be less than 16 V from V_N . If the ISO15 and ISO35 are tested as a stand-alone device, $R_{IN} = 6 \times 10^4 \Omega$, $C_{IN} = 16 \times 10^{-12} \text{ F}$, $R_{ISO} = 10^9 \Omega$ and $C_{ISO} = 10^{-12} \text{ F}$.

Note from Figure 21 that the resistor ratio determines the voltage ratio at low frequency and it is the inverse capacitance ratio at high frequency. In the stand-alone case and for low frequency,

$$\frac{V_{GND2}}{V_N} = \frac{R_{ISO}}{R_{ISO} + R_{IN}} = \frac{10^9}{10^9 + 6 \times 10^4} \quad (2)$$

or essentially all of noise appears across the barrier. At high frequency,

$$\frac{V_{GND2}}{V_N} = \frac{\frac{1}{C_{ISO}}}{\frac{1}{C_{ISO}} + \frac{1}{C_{IN}}} = \frac{1}{1 + \frac{C_{ISO}}{C_{IN}}} = \frac{1}{1 + \frac{1}{16}} = 0.94 \quad (3)$$

and 94% of V_N appears across the barrier. As long as R_{ISO} is greater than R_{IN} and C_{ISO} is less than C_{IN} , most of transient noise appears across the isolation barrier.

It is not recommend for the user to test equipment transient susceptibility with ESD generators, or consider product claims of ESD ratings above the barrier transient ratings of an isolated interface. ESD is best managed through recessing or covering connector pins in a conductive connector shell and installer training.

Figure 21. Noise Model

REVISION HISTORY

Changes from Original (May 2008) to Revision A	Page
- Changed L(101) Minimum air gap (Clearance) From 7.7mm To 8.34mm. - Deleted CSA information from the Regulatory Information Table. - Changed From 40014131 To 40016131	10 10 10
Changes from Revision A (June 2008) to Revision B	Page
- Changed From: 4000-Vpeak Isolation To: 4000-Vpeak Isolation, 560-Vpeak VIORM UL 1577, IEC 60747-5-2 (VDE 0884, Rev 2) - Changed Figure 13, Full-Duplex Common-Mode Transient Immunity Test Circuit	1 8
Changes from Revision B (July 2008) to Revision C	Page
- Added added IEC.....Approved - Added added CSA information column back in table	1 10
Changes from Revision C (December 2008) to Revision D	Page
Changed Propagation delay values From: μs To: ns in the DRIVER SWITCHING table	3
Changes from Revision D (March 2009) to Revision E	Page
- Added devices ISO15M and ISO35M to the data sheet - Changed Description - From: The ISO15 and ISO35 are qualified for use from -40°C to 85°C. To: The ISO15M and ISO35M have extended ambient temperature ratings of -55°C to 125°C while the ISO15 and ISO35 are specified over -40°C to 85°C. - Added the Product Information table - Added Added Ambient Temp information in the RECOMMENDED OPERATING CONDITIONS table - Added ISO15M and ISO35M to the Operating junction temperature in the RECOMMENDED OPERATING CONDITIONS table - Changed the DRIVER ELECTRICAL table, I_{OZ} High-impedance state output current - Test Condition V_Y or $V_Z = 12\text{ V}$, $V_{CC} = 0$ values From: TYP = -10 , MAX = - To: TYP = -, MAX = 90. - Changed the DRIVER ELECTRICAL table, I_{OZ} High-impedance state output current - Test Condition V_Y or $V_Z = -7\text{ V}$ values From: TYP = -, MAX = 90 To: TYP = -10, MAX = - - Added t_r, t_f limits for the ISO15M ans ISO35M devices - Added I_A or I_B limits for the ISO15M ans ISO35M devices - Added pulse skew limits for the ISO15M ans ISO35M devices - Added t_r, t_f for the ISO15M ans ISO35M devices - Added the Driver output pins Note for Figure 1 through Figure 4 - Changed the Driver output pins Note for eFigure 5 through Figure 6 - Added Note 1 to Table 1 Driver Function Table - Added Note 1 to Table 2 Receiver Function Table - Changed Figure 19 - replaced curves - Changed Figure 20 - replaced curves	1 1 1 2 2 3 3 3 4 4 4 4 5 6 9 9 14 14

Changes from Revision E (April 2010) to Revision F
Page

• Changed the FEATURES From: 4000- V_{peak} 560- V_{peak} V_{IORM} per IEC....Rev 2) To: 4000- V_{PK} V_{IOTM} , 560- V_{PK} V_{IORM} , IEC 60747-5-2 (VDE 0884, Rev 2)	1
• Changed Description From: The symmetrical isolation.....interface. To; The symmetrical isolation barrier of the device is tested to provide isolation of 4000 V_{PK} per VDE and 2500 V_{RMS} per UL and CSA betweeninterface.	1
• Changed CTI From: ≥ 175 V To: ≥ 400 V	10
• Changed the IEC Ratings table, Basic isolation group, specification from IIIa to II	10
• Changed the Regulatory Information Table	10

⁽¹⁾ The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBsolete: TI has discontinued the production of the device.

⁽²⁾ Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

⁽³⁾ MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

⁽⁴⁾ Multiple Top-Side Markings will be inside parentheses. Only one Top-Side Marking contained in parentheses and separated by a "--" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Top-Side Marking for that device.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

PLASTIC SMALL OUTLINE

- NOTES:
- All linear dimensions are in inches (millimeters). Dimensioning and tolerancing per ASME Y14.5M-1994.
 - This drawing is subject to change without notice.
 - Body dimensions do not include mold flash or protrusion not to exceed 0.006 (0,15).
 - Falls within JEDEC MS-013 variation AA.

DW (R-PDSO-G16)

PLASTIC SMALL OUTLINE

4209202-7/F 08/13

- NOTES:
- All linear dimensions are in millimeters.
 - This drawing is subject to change without notice.
 - Refer to IPC7351 for alternate board design.
 - Solder mask tolerances between and around signal pads can vary based on board fabrication site.
 - Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
 - Board assembly site may have different recommendations for stencil design.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
