1 Introduction

This user's guide contains background information for the TPS54325 as well as support documentation for the TPS54325EVM evaluation module. Also included are the performance specifications, schematic and the bill of materials for the TPS54325EVM.

1.1 Background

The TPS54325 is a single, adaptive on-time D-CAP2™ mode synchronous buck converter. System designers may use the TPS54325 to complete various end equipment dc/dc converters with a low cost, low component count, low standby current solution. The main control loop for the TPS54325 uses the D-CAP2™ mode that optimized for low ESR output capacitors such as POSCAP, SP-CAP, High Polymer Chemistry or ceramic types. This control loop implementation provides fast transient response with no external compensation components. The TPS54325 dc/dc synchronous converter is designed to provide up to a 3-A output from an input control voltage source (VCC) of 4.5 V to 18 V, input power voltage source (VIN) of 2.0 V to 18 V and output voltage from 0.76 V to 5.5 V. Rated input voltage and output current range for the evaluation module are given in [Table 1](#).

Table 1. Input Voltage and Output Current Summary

EVM	INPUT VOLTAGE RANGE	OUTPUT CURRENT RANGE
TPS54325EVM	V _{IN} = 5 V to 17 V	0 A to 3 A

1.2 Performance Specification Summary

A summary of the TPS54325EVM performance specifications is provided in [Table 2](#). Specifications are given for an input voltage of V_{IN} = 12 V and an output voltage of 1.05 V, unless otherwise noted. The VIN and VCC input voltage pins are connected on the EVM using a 0-Ω resistor (R9). The ambient temperature is 25°C for all measurement, unless otherwise noted.

Table 2. TPS54325EVM Performance Specifications Summary

SPECIFICATION	TEST CONDITIONS	MIN	TYP	MAX	UNIT
Input voltage range (V _{IN})		5	12	17	V
Output voltage			1.05		V
Operating frequency	V _{IN} = 12 V, I _{out1} = 1 A		700		kHz
Output current range		0		3	A
Over current limit	V _{IN} = 12 V		4.1		A
Output ripple voltage	V _{IN} = 12 V, I _{out1} = 3 A		9		mVp-p
Efficiency	V _{IN} = 12 V, V _{OUT} = 3.3 V, I _{OUT} = 1.2 A		91		%

1.3 Modifications

These evaluation modules are designed to provide access to the feature set of the TPS54325. Some modification can be made to this module.

1.3.1 Output Voltage Set Point

The output voltage of the EVM is set using the voltage divider of R1 + R4 and R2. To change the output voltage of the EVMs, it is necessary to change the value of resistors R1 and R4 while leaving R2 fixed. Changing the value of R1 and R4 can change the output voltage above 0.765 V. The value of R1 and R4 for a specific output voltage basically can be calculated using [Equation 1](#).

$$V_o = 0.765 \cdot \left(1 + \frac{R1+R4}{R2}\right) \quad (1)$$

[Table 3](#) lists the each R1 and R4 value for some common output voltages. C9 is used for faster load transient response and is not normally used. Note that the values given in [Table 3](#) are standard values, and not the exact value calculated using [Table 3](#).

Table 3. Output Voltages

Output Voltage (V)	R1(Ω)	R4(Ω)	R2(Ω)	C9(F)	L1(H)
1.0	6.8 k	100	22 k		1..5 μ
1.05	8.2 k	220	22 k		1.5 μ
1.2	12 k	820	22 k		1.5 μ
1.8	27 k	3.0 k	22 k		2.2 μ
2.5	47 k	3.0 k	22 k		2.2 μ
3.3	68 k	4.7 k	22 k	680 p	2.2 μ
5	120 k	1.2 k	22 k	220 p	3.3 μ

2 Test Setup and Results

This section describes how to properly connect, set up, and use the TPS54325 EVM. The section also includes test results typical for the evaluation modules and efficiency, output load regulation, output line regulation, load transient response, output voltage ripple, input voltage ripple, start up and switching frequency.

2.1 Test Setup

Connect test equipment and TPS54325EVM board as shown in [Figure 1](#).

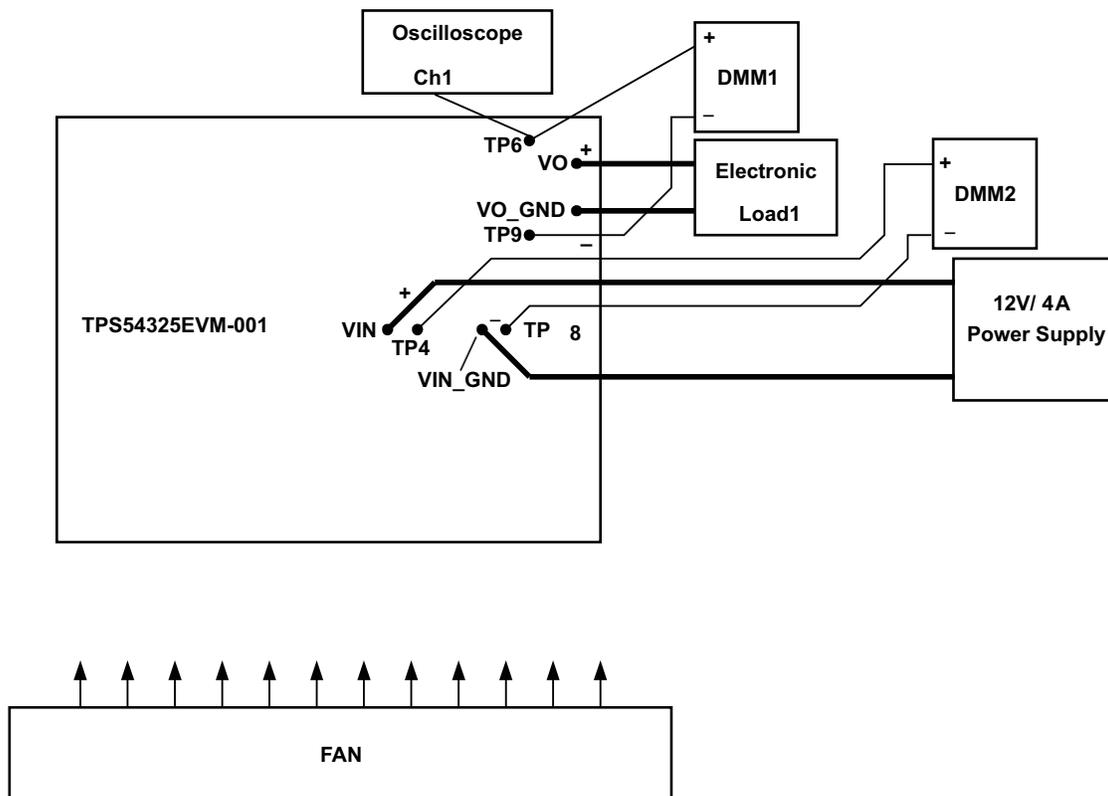

Figure 1. Equipment Setup for TPS54325EVM Board

2.2 Test Procedure

1. Make sure the switch SW1 (EN) is in the "OFF" position.
2. Apply the appropriate V_{IN} voltage to VIN and VIN_GND terminals.
3. Turn on SW1 (EN) to enable the EVM output voltage.

2.3 Efficiency

Figure 2 shows the efficiency for the TPS54325EVM at an ambient temperature of 25°C. The EVM was modified for operation at 3.3-, 2.5- and 1.8-V output using the R1 and R4 values in Table 3.

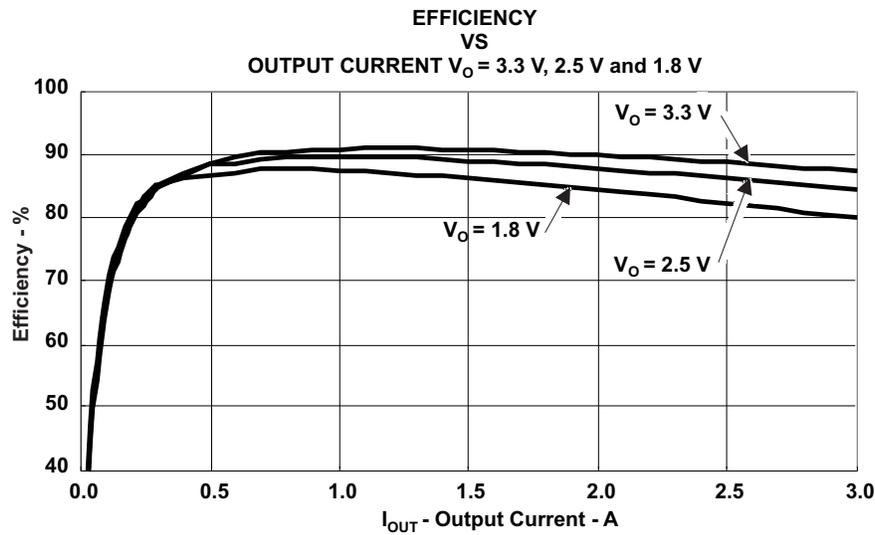

Figure 2. TPS54325EVM Efficiency

2.4 Load Regulation

The load regulation for the TPS54325EVM is shown Figure 3.

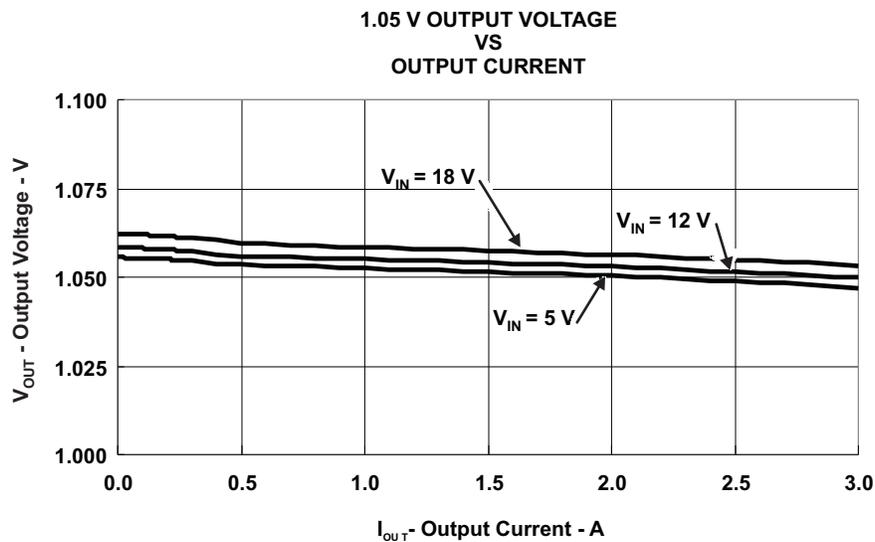

Figure 3. TPS54325EVM Load Regulation

2.5 Line Regulation

The line regulation for the TPS54325EVM is shown [Figure 4](#).

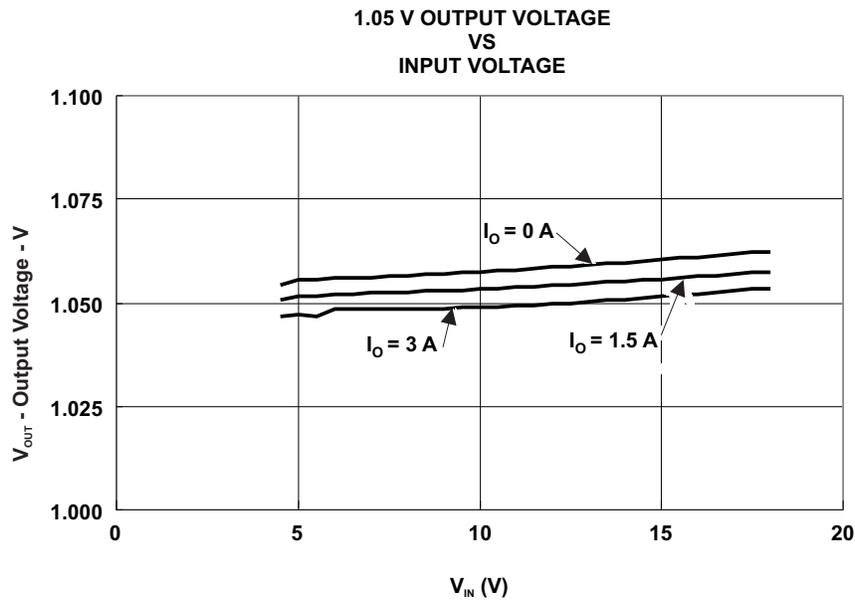

Figure 4. TPS54325EVM Line Regulation

2.6 Load Transient Response

The TPS54325EVM response to load transient is shown in [Figure 5](#). The current step is from 0 A to 3 A of maximum rated load. Total peak to peak voltage variation is as shown.

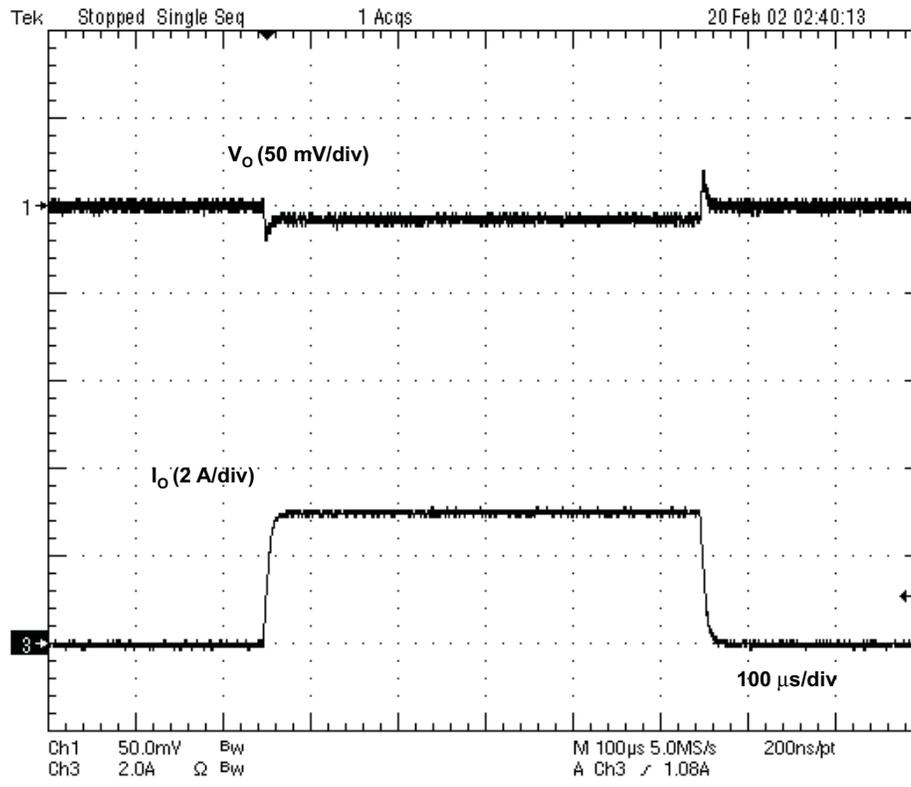

Figure 5. TPS54325EVM Load Transient Response

2.7 Output Voltage Ripple

The TPS54325EVM output voltage ripple is shown in [Figure 6](#). The output current is the rated full load of 3 A.

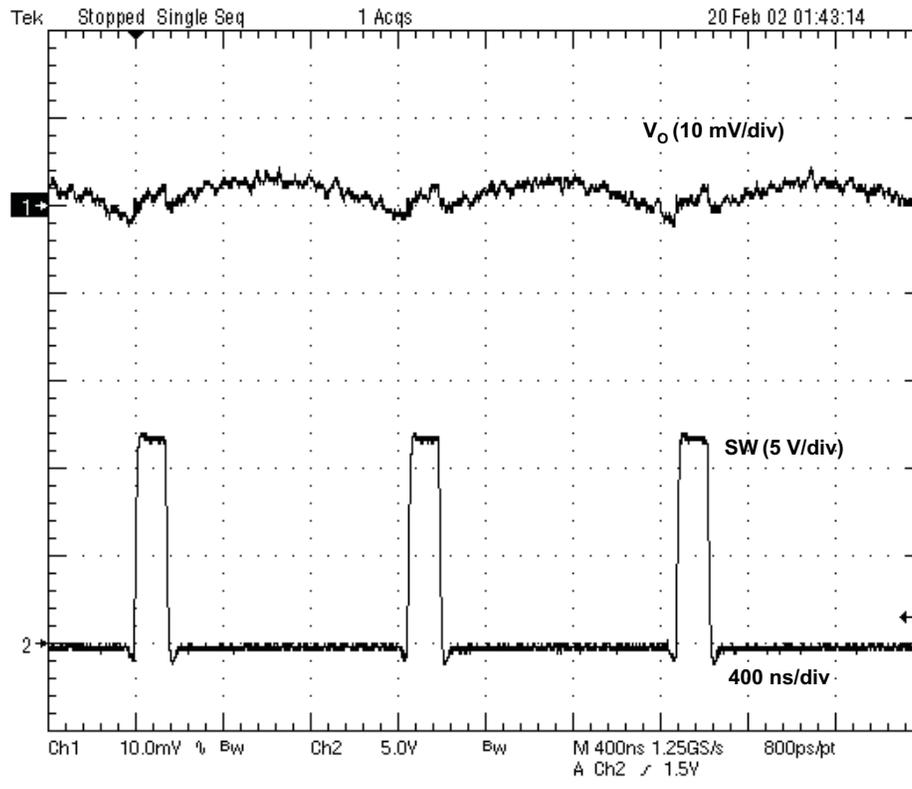

Figure 6. TPS54325EVM Output Voltage Ripple

2.8 Input Voltage Ripple

The TPS54325EVM input voltage ripple is shown in Figure 7. The output current is the rated full load of 3 A.

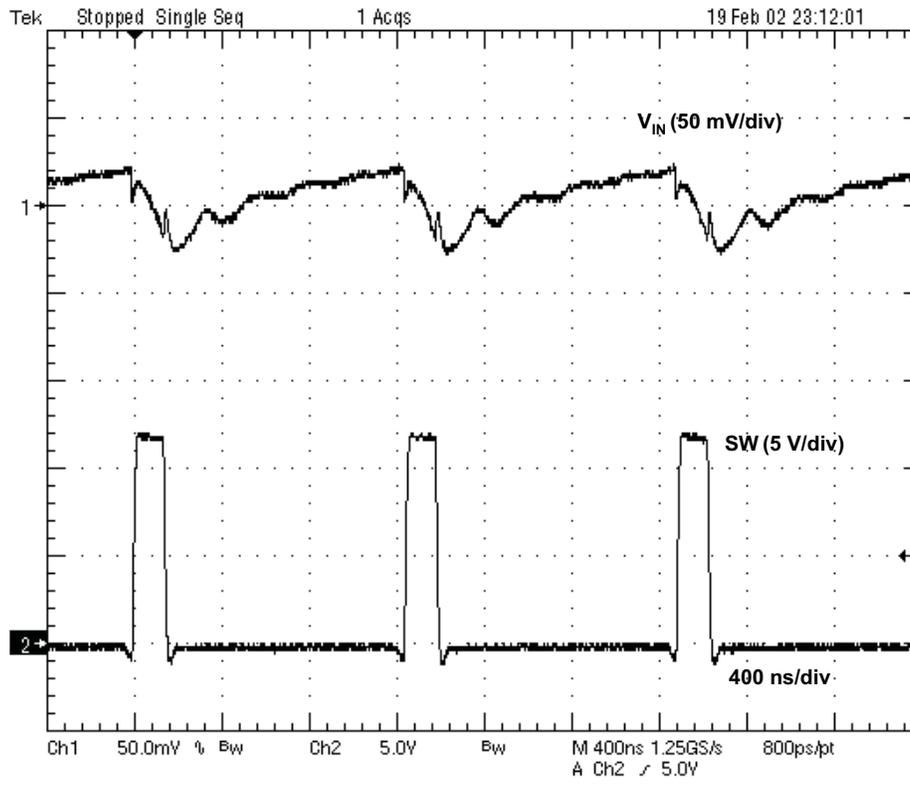

Figure 7. TPS54325EVM Input Voltage Ripple

2.9 Start Up

The TPS54325EVM start up waveform is shown in [Figure 8](#).

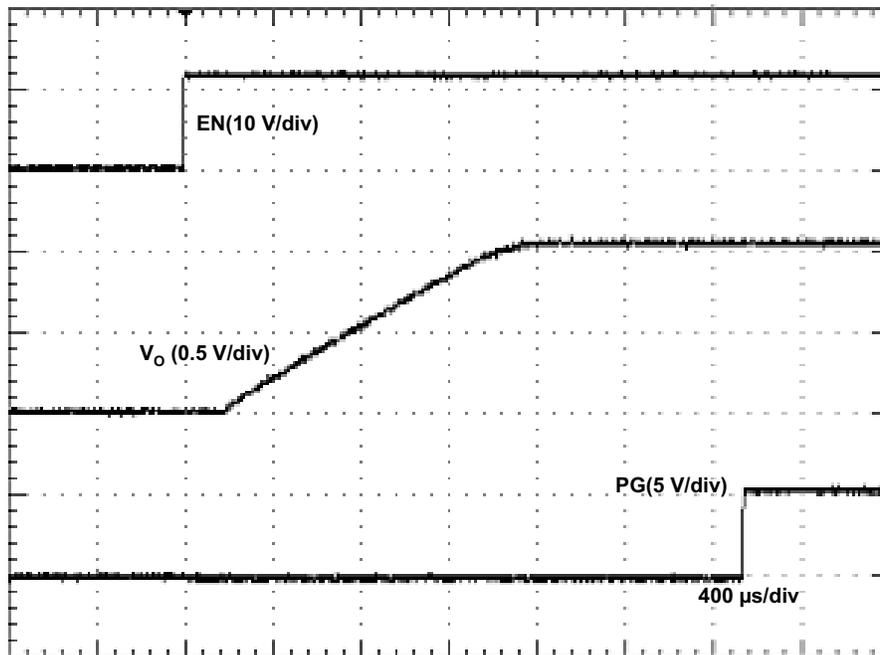

Figure 8. TPS54325EVM Start Up

2.10 Switching Frequency

The TPS54325EVM switching frequency is shown in [Figure 9](#).

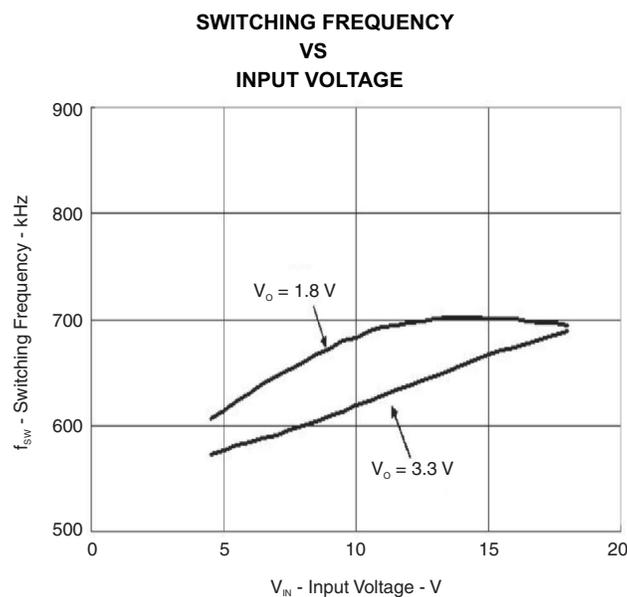

Figure 9. TPS54325EVM Switching Frequency

3 Board Layout

This section provides description of the TPS54325EVM, board layout, and layer illustrations.

3.1 Layout

The board layout for the TPS54325EVM and is shown in [Figure 10](#) through [Figure 15](#). The top layer contains the main power traces for V_{IN} , V_{OUT} and the SW1 and SW2 nodes. Also on the top layer are connections for the pins of the TPS54325 and a large area filled with power ground (PGND) connected to pins 8 and 9 of the TPS54325. The first internal layer is a split ground plane containing a large power ground (PGND) area and a smaller signal ground (GND) area. The second internal layer contains an additional V_{IN} trace and a connection from switch SW1 to V_{CC} . The remainder of the second internal layer is power ground (PGND) area. The bottom layer contains the remainder of the circuit interconnect traces and the signal ground plane (GND) that is connected to pin 5 of the TPS54325 through a via near the pin. The signal ground and power ground are electrically common. They are connected together on the pcb at the pin 5 and the powerpad of the TPS54325. The bottom assembly layer is shown as looking from the back side of the printed circuit board.

The input decoupling capacitor and all parts are located as close to the IC as possible.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
